I'm looking at buying the Bob Myers mode S system for P3D. It has a nice dish and downconverter for around $400(U.S). I am wondering if anyone has tried one of these systems or looked at it. I seems like just what I want to P3D, but is it a good system. Let me know via e-mail or on the amsat-bb. Others might want to know the same thing, 73 and Happy New Year de Bj.

Subject: ICOM CT-17 (CI-V) Interface programs out there?

Happy New Year from Seattle,

I am looking for bare bones, or better, shareware programs used by us to
tie our rigs to the PC. My shack will be automating an IC-R7000, IC-735,
IC-275H, and a IC-475H. If you have a program (BOTH binary and source
code) I would love to download it. Just let me know where to get it.
Anybody really close by, I'll buy lunch for the first few! I work near
Boeing Field. 73

Date: 31 Dec 1996 21:05:12 GMT
From: tkelso@afit.af.mil (TS Kelso)
Subject: NORAD Two-Line Orbital Element Set Format

As a service to the satellite user community, the following description of the
NORAD two-line orbital element set format is uploaded to sci.space.news and
rec.radio.amateur.space on a monthly basis. The most current orbital elements
from the NORAD two-line element sets are carried on the *NEW* Celestial WWW,

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are
also available on this system. In addition, element sets (updated daily) and
some documentation and software are also available via anonymous ftp from

archive.afit.af.mil (129.92.1.66)

in the directory pub/space.

==

Data for each satellite consists of three lines in the following format:

AAAAAAAAAAAAAAAAAAAAA
1 NNNNNU NNNNNAAA NNNNN.NNNNNNNN +.NNNNNNNN +NNNNN-N +NNNNN-N N NNNNN
2 NNNNN NNN.NNNN NNN.NNNN NNNNNNN NNN.NNNN NNN.NNNN NN.NNNNNNNNNNNNNN

Line 0 is a twenty-two-character name (this change is being made to be
consistent with the name length in the NORAD SATCAT).

Lines 1 and 2 are the standard Two-Line Orbital Element Set Format identical
to that used by NORAD and NASA. The format description is:

Line 1
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
10-11 International Designator (Last two digits of launch year)
12-14 International Designator (Launch number of the year)
15-17 International Designator (Piece of launch)
19-20 Epoch Year (Last two digits of year)
21-32 Epoch (Julian Day and fractional portion of the day)
34-43 First Time Derivative of the Mean Motion
or Ballistic Coefficient (Depending on ephemeris type)
45-52 Second Time Derivative of Mean Motion (decimal point assumed;
blank if N/A)
54-61 BSTAR drag term if GP4 general perturbation theory was used.
Otherwise, radiation pressure coefficient. (Decimal point assumed)
63-63 Ephemeris type
65-68 Element number
69-69 Check Sum (Modulo 10)
(Letters, blanks, periods, plus signs = 0; minus signs = 1)

Line 2
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
09-16 Inclination [Degrees]
18-25 Right Ascension of the Ascending Node [Degrees]
27-33 Eccentricity (decimal point assumed)
35-42 Argument of Perigee [Degrees]
44-51 Mean Anomaly [Degrees]
53-63 Mean Motion [Revs per day]
64-68 Revolution number at epoch [Revs]
69-69 Check Sum (Modulo 10)

All other columns are blank or fixed.

Example:

NOAA 6
1 11416U 86 50.28438588 0.00000140 67960-4 0 5293
2 11416 98.5105 69.3305 0012788 63.2828 296.9658 14.24899292346978

Yeah, I have the same problem with my IC-T7a. I can receive below 440, but
there's no way to transmit below 440Mhz. Arrgh.

Fellow Amateurs: Please read the first two paragraphs!

CLAWSON@TELEGRAFIX.COM (PAT CLAWSON) said to ALL in comp.bbs.misc:

Boardwatch may have abandoned the BBS sysop, but TeleGrafix is still standing strong with them. However, we think that BBS systems must become Internet-connected if they are to survive in a Webbed world.

First, we need to quit calling these online systems by the moniker "BBS." The term has come to reflect something on the order of ham radio -- low-rent communications run by amateurs. That may accurately reflect some BBS systems, but we've found that many sysops run very professional online businesses.

Second, we need to start emphasizing the Power of Telnet and talk about Telnet Sites, not BBS systems. A telnettable BBS or legacy system can do many things the Web can't. Most of the computer industry and public has been Web-washed (brainwashed) by all the press hype. They think the Web is all there is to the Internet/online experience. Just a couple of days ago, I was talking to the Internet reporter for one of America's most prestigious newspapers. He had never even heard of Telnet, didn't have a clue what it was -- and his news reports influence literally millions of Americans. BBS sysops and BBS system manufacturers need to refocus their efforts, and begin producing tools and content that take advantage of the Power of Telnet.

Third, Telnet Site operators (such as BBS sysops) must professionalize the look and feel of their systems. Most sysops make little investment in quality graphics for their systems. In a glitzy Web world, it is little wonder that the public is turned off by ANSI BBS systems no matter how if the content on them is of high quality. We constantly hear BBS sysops complain about having to pay what are very modest sums of money for RIPscrip graphics -- but the people running Web sites don't think twice about investing thousands of dollars for a fabulous look.

Despite all the flack we take from BBS sysops, we continue to support their efforts -- and we always will. But BBS sysops have to change with the times, and they have to be willing to invest to upgrade their systems to compete with (or complement) the Web.

On Christmas, TeleGrafix released the first multimedia Telnet browsers. RIPtel Visual Telnet is available now from our Web site at www.telegrafix.com. This is a huge step forward for the Internet, and it represents a salvation for BBS sysops by placing Telnet graphically on a higher level than the Web.

The serious professional operators will get on board the Visual Telnet
train, and they will live to see a brighter day.

Subject: MIR

>Well Amsat Journal is RIGHT but the MIR station decided
>after the fact to change.
>
>We have two large repeaters in Dallas on 145.190 and 145.210
>and that makes it a problem to catch the voice downlink.

And with nationwide APRS activity on 145.79, that's a problem for
many, as well. Folks in Indianapolis want APRS to move from it's
coordinated frequency. Seems like MIR could have researched a bit
and tried to coordinate before they moved.

From: "Paul E. Traufler" <wintrak@traveller.com>
Subject: WinTrak Pro Release

WinTrak Pro New Release!

WinTrak Pro Version 4.5 has added and improved many areas in the program.
The Rendered views have been improved along with several new views
available also. This is just a small list of the many improvements made to
the program. Remember this program is a full 32-bit version, do not accept
any substitutions! Do not let those other programs fool you with the old,
"It works under Win95", but in reality it is a Windows 3.1 16-bit program.
Its your money, demand the best!

New Items:

Visible now satellites can be any of the 4 satellite groups.
Satellite elements statistics, such as oldest, newest and average age of
elements.
Zoom in on the Render views.
Added plot the next 2 passes option to render views.
Automatic LF to CR-LF text file detection and correction. (UNIX to DOS
Text conversion)
Mercator map added to the Rendered maps options.
Added Multi-Satellite 3D and Mercator maps Rendered views.
Added satellite labels to Rendered views.
Added option to set Sun terminator on the Render views.
Added satellite Rise/Set alarms, can play user recorded Wave files or
provided Wave files.
Greatly improved help file with printed manual options included in help
file.
Lowered the minimum satellite altitude to 90 km from the past 160 km.
This version works with Windows NT 4.0 now also.

The "players" ie Dave Larson N6JLH alias N6CO alias K6MIR and Miles
Mann WF1F were told well in advance that this was going to be a
problem with not only APRS, but also the Repeaters, they in turn I
would assume notified their contacts at AMSAT and ARRL and NASA and
SOUP, at any rate G3BGM also was told that especially here in the
states that pair would be a problem, and it was taken to the European
Amateur radio conference where the frequencies were decided upon. I
realized long ago that the doppler shift would bring it into
interference with both, and it does.. there is little hope. there is a
possibility they may try another pair, but slim. 73 DAVE

Subject: new mir freq for 1997

Hello all ,
Just had a nice short contact with John KC5TZQ at 16:07 30-12-96
. It must be said that John is a very good operator as he worked several
stations over Europe , He also informed us that as of the first of
January 1997 they will change freq on 2meters as follows .

mir tx 145.800
mir rx 145.200

ie the reverse of now !!.
73 de Dave EI4HT and Jim EI3DP .

From: tkelso@afit.af.mil (TS Kelso)
Subject: NORAD Two-Line Orbital Element Sets (TLE922)

The most current orbital elements from the NORAD two-line element sets are
carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are
also available on this system.

Element sets (also updated daily) and some documentation and software are
available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the
directory pub/space.

As a service to the satellite user community, the most current of these
elements are uploaded weekly to sci.space.news and rec.radio.amateur.space.
This week's elements are provided below.

Dr TS Kelso Adjunct Professor of Space Operations
tkelso@afit.af.mil Air Force Institute of Technology

------------------------------

Date: Mon, 30 Dec 1996 18:37:00 -0500
From: Susan Driggers <Insight@cris.com>
Subject: Total Newbie Looking for help

I am totally new to satellite communications and am looking for some
advice on the bare minimum needed to get started. I am operating on a very
restricted budget so anything that could be homebrewed would be
appreciated.
I currently have a HT 202 that I am dedicating to sattelite. Everything
else I will need advice on. THanks !

From: "BJ Arts" <bjarts@uslink.net>
Subject: Mode S info

I'm looking at buying the Bob Myers mode S system for P3D. It has a nice
dish and downconverter for around $400(U.S). I am wondering if anyone has
tried one of these systems or looked at it. I seems like just what I want
to P3D, but is it a good system. Let me know via e-mail or on the amsat-bb.
Others might want to know the same thing, 73 and Happy New Year de Bj.

From: Tom Valenti <valenti@eskimo.com>
Subject: ICOM CT-17 (CI-V) Interface programs out there?

Happy New Year from Seattle,

I am looking for bare bones, or better, shareware programs used by us to
tie our rigs to the PC. My shack will be automating an IC-R7000, IC-735,
IC-275H, and a IC-475H. If you have a program (BOTH binary and source
code) I would love to download it. Just let me know where to get it.
Anybody really close by, I'll buy lunch for the first few! I work near
Boeing Field. 73

Subject: New Mir frequencies

There is a reversal of the freqs on mir these messages were on the PMS
today, it implies that packet will now be duplex.

From: tkelso@afit.af.mil (TS Kelso)
Subject: NORAD Two-Line Orbital Element Set Format

As a service to the satellite user community, the following description of the
NORAD two-line orbital element set format is uploaded to sci.space.news and
rec.radio.amateur.space on a monthly basis. The most current orbital elements
from the NORAD two-line element sets are carried on the *NEW* Celestial WWW,

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are
also available on this system. In addition, element sets (updated daily) and

some documentation and software are also available via anonymous ftp from

archive.afit.af.mil (129.92.1.66)

in the directory pub/space.

==========

Data for each satellite consists of three lines in the following format:

```
AAAAAAAAAAAAAAAAAAAAA
1 NNNNNU NNNNNAAA NNNNN.NNNNNNNN +.NNNNNNNN +NNNNN-N +NNNNN-N N NNNNN
2 NNNNN NNN.NNNN NNN.NNNN NNNNNNN NNN.NNNN NNN.NNNN NN.NNNNNNNNNNNNN
```

Line 0 is a twenty-two-character name (this change is being made to be consistent with the name length in the NORAD SATCAT).

Lines 1 and 2 are the standard Two-Line Orbital Element Set Format identical to that used by NORAD and NASA. The format description is:

Line 1
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
10-11 International Designator (Last two digits of launch year)
12-14 International Designator (Launch number of the year)
15-17 International Designator (Piece of launch)
19-20 Epoch Year (Last two digits of year)
21-32 Epoch (Julian Day and fractional portion of the day)
34-43 First Time Derivative of the Mean Motion
or Ballistic Coefficient (Depending on ephemeris type)
45-52 Second Time Derivative of Mean Motion (decimal point assumed;
blank if N/A)
54-61 BSTAR drag term if GP4 general perturbation theory was used.
Otherwise, radiation pressure coefficient. (Decimal point assumed)
63-63 Ephemeris type
65-68 Element number
69-69 Check Sum (Modulo 10)
(Letters, blanks, periods, plus signs = 0; minus signs = 1)

Line 2
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
09-16 Inclination [Degrees]
18-25 Right Ascension of the Ascending Node [Degrees]
27-33 Eccentricity (decimal point assumed)
35-42 Argument of Perigee [Degrees]
44-51 Mean Anomaly [Degrees]
53-63 Mean Motion [Revs per day]
64-68 Revolution number at epoch [Revs]
69-69 Check Sum (Modulo 10)

All other columns are blank or fixed.

Example:

NOAA 6
1 11416U 86 50.28438588 0.00000140 67960-4 0 5293
2 11416 98.5105 69.3305 0012788 63.2828 296.9658 14.24899292346978

Yeah, I have the same problem with my IC-T7a. I can receive below 440, but
there's no way to transmit below 440Mhz. Arrgh.

Fellow Amateurs: Please read the first two paragraphs!

CLAWSON@TELEGRAFIX.COM (PAT CLAWSON) said to ALL in comp.bbs.misc:

Boardwatch may have abandoned the BBS sysop, but TeleGrafix is still standing
strong with them. However, we think that BBS systems must become
Internet-connected if they are to survive in a Webbed world.

First, we need to quit calling these online systems by the moniker "BBS."
The term has come to reflect something on the order of ham radio -- low-rent
communications run by amateurs. That may accurately reflect some BBS
systems, but we've found that many sysops run very professional online
businesses.

Second, we need to start emphasizing the Power of Telnet and talk about
Telnet Sites, not BBS systems. A telnettable BBS or legacy system can do
many things the Web can't. Most of the computer industry and public has
been Web-washed (brainwashed) by all the press hype. They think the Web
is all there is to the Internet/online experience. Just a couple of days
ago, I was talking to the Internet reporter for one of America's most
prestigious newspapers. He had never even heard of Telnet, didn't have a
clue what it was -- and his news reports influence literally millions of
Americans. BBS sysops and BBS system manufacturers need to refocus their

efforts, and begin producing tools and content that take advantage of the Power of Telnet.

Third, Telnet Site operators (such as BBS sysops) must professionalize the look and feel of their systems. Most sysops make little investment in quality graphics for their systems. In a glitzy Web world, it is little wonder that the public is turned off by ANSI BBS systems no matter how if the content on them is of high quality. We constantly hear BBS sysops complain about having to pay what are very modest sums of money for RIPscrip graphics -- but the people running Web sites don't think twice about investing thousands of dollars for a fabulous look.

Despite all the flack we take from BBS sysops, we continue to support their efforts -- and we always will. But BBS sysops have to change with the times, and they have to be willing to invest to upgrade their systems to compete with (or complement) the Web.

On Christmas, TeleGrafix released the first multimedia Telnet browsers. RIPtel Visual Telnet is available now from our Web site at www.telegrafix.com. This is a huge step forward for the Internet, and it represents a salvation for BBS sysops by placing Telnet graphically on a higher level than the Web.

The serious professional operators will get on board the Visual Telnet train, and they will live to see a brighter day.

>Well Amsat Journal is RIGHT but the MIR station decided
>after the fact to change.
>
>We have two large repeaters in Dallas on 145.190 and 145.210
>and that makes it a problem to catch the voice downlink.

And with nationwide APRS activity on 145.79, that's a problem for many, as well. Folks in Indianapolis want APRS to move from it's coordinated frequency. Seems like MIR could have researched a bit and tried to coordinate before they moved.

From: "Paul E. Traufler" <wintrak@traveller.com>
Subject: WinTrak Pro Release

WinTrak Pro New Release!

WinTrak Pro Version 4.5 has added and improved many areas in the program. The Rendered views have been improved along with several new views available also. This is just a small list of the many improvements made to the program. Remember this program is a full 32-bit version, do not accept any substitutions! Do not let those other programs fool you with the old, "It works under Win95", but in reality it is a Windows 3.1 16-bit program. Its your money, demand the best!

New Items:

Visible now satellites can be any of the 4 satellite groups.
Satellite elements statistics, such as oldest, newest and average age of elements.
Zoom in on the Render views.
Added plot the next 2 passes option to render views.
Automatic LF to CR-LF text file detection and correction. (UNIX to DOS Text conversion)
Mercator map added to the Rendered maps options.
Added Multi-Satellite 3D and Mercator maps Rendered views.
Added satellite labels to Rendered views.
Added option to set Sun terminator on the Render views.
Added satellite Rise/Set alarms, can play user recorded Wave files or provided Wave files.
Greatly improved help file with printed manual options included in help file.
Lowered the minimum satellite altitude to 90 km from the past 160 km.
This version works with Windows NT 4.0 now also.

Subject: mir comms problems

I see on Hearsat mail list that there have been problems on the mir
communications, Has that effected Amateur Radio activities I wonder?

The "players" ie Dave Larson N6JLH alias N6CO alias K6MIR and Miles
Mann WF1F were told well in advance that this was going to be a
problem with not only APRS, but also the Repeaters, they in turn I
would assume notified their contacts at AMSAT and ARRL and NASA and
SOUP, at any rate G3BGM also was told that especially here in the
states that pair would be a problem, and it was taken to the European
Amateur radio conference where the frequencies were decided upon. I
realized long ago that the doppler shift would bring it into
interference with both, and it does.. there is little hope. there is a
possibility they may try another pair, but slim. 73 DAVE

Subject: MIR info..

Dave, try 145.200 + 600 voice, 145.800 simplex paket,
437950 - 2200 pl 141.3 repeater, and 437.925 for a recorded
greeting from Mir. Good luck, and have fun.

From: jim ryan <sigma4@iol.ie>
Subject: new mir freq for 1997

Hello all ,
Just had a nice short contact with John KC5TZQ at 16:07 30-12-96
. It must be said that John is a very good operator as he worked several
stations over Europe , He also informed us that as of the first of
January 1997 they will change freq on 2meters as follows .

mir tx 145.800
mir rx 145.200

ie the reverse of now !!.
73 de Dave EI4HT and Jim EI3DP .

From: tkelso@afit.af.mil (TS Kelso)
Subject: NORAD Two-Line Orbital Element Sets (TLE922)

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

From: Susan Driggers <Insight@cris.com>
Subject: Total Newbie Looking for help

I am totally new to satellite communications and am looking for some
advice on the bare minimum needed to get started. I am operating on a very
restricted budget so anything that could be homebrewed would be
appreciated.
I currently have a HT 202 that I am dedicating to sattelite. Everything
else I will need advice on. THanks !

Keplerian bulletins are transmitted twice weekly from W1AW. The
next scheduled transmission of these data will be Saturday, January
4, 1997, at 2330z on Baudot and AMTOR.

Forwarded Message; CLAWSON@TELEGRAFIX.COM (PAT CLAWSON) said to GEORGE TAMAYO

C(>George...
C(>
C(>
C(>My remarks concering BBS systems were not meant in any way as
C(>a slight against ham radio operators. I've personally been involved
C(>in commercial broadcasting AND amateur radio activities for over
C(>20 years, and I have a very high regard for hams and recognize their
C(>public service activities and technical expertise.
C(>
C(>Still, there is a world of difference between commercial broadcasters
C(>-- who have tens of millions of dollars wrapped up in their stations
C(>-- and the local ham, who has at most several thousand dollars. I was
C(>attempting, perhaps somewhat inartfully at a very late hour, to make
C(>a similar comparison between BBS sysops and Web site operators.
C(>
C(>I hope you will post this to those newsgroups and lists that you
C(>forwarded my original message.
C(>
C(>Regards,
C(>

Long Delayed Echo mysteries...

Hi,
I'm doing some research for a documentary about anomalies. One of the
subjects I'm interested in is that of LDE's. I have done some reading on
the subject and noted a few experiments - however, I'm looking for new
information & experiences which may help to throw more light on the matter.

Of especial interest is the geographic "preferences" of LDEs. I noted for
example that some evidence pointed to LDEs being more prevalent in
the Polar regions. Do LDE's have any other preferences? Also, I'm
interested in the various characteristics of the LDEs. I noted some
saying that it tends to occur when "opening up" a frequency.

If you have had any experiences, or know of further literature or people
I can consult - I would very much appreciate it.

I have posted this in several newsgroups since I wasn't quite sure
which is the best place to go, so if this is out of place - I apologise.

If you can help in any way, kindly reply by e-mail. Thanks.

Cheers, Jan...

Greetings all and Happy 1997.

Just a reminder that Mir has switched the offset on the 2 meter station.

We all now listen on 145.800 and we transmit on 145.200

(I KNOW some of you are tired of talking about this..)
But, I though a reminder would be good to get the word out to others who
do not read this listserv, This morning I heard A LOT of stations who
were operating on the old
offset. Have fun and saty safe in '97!

From: Jeff Griffin <griffinj@admin.tc.faa.gov>
Message-ID: <5agjsf$gnd@faatcrl.faa.gov>
Source record: 20470

Jim, I read your message about the change on January 1. I talked to kc5tzq in the morning New Year's day. John said he was glad I got the frequency change. But no one mentioned the fact that the paket frequencies are now the same as voice, no longer simplex that is. So, the new paket freqencies are now 145.200 up 145.800 down. Everyone in the group have a Happy and prosperious New Year.

>Besides DirectPC what other home Internet satellite service
>companies are there? Thanks in advace,

I just pulled up this company with yahoo:

http://www.techguardian.com/

They seem to have everything from 400K receive only (like DirectPC) to
receive and transmit to 3Mbps!!! (Screw Bell Atlantic! Who needs 'um!)

Unfortunately the webpage has no prices. : <

I called up and the Service they offer that is equivalent to DirectPC has
software for '95, NT, and Unix (alright!! Linux!) with network options. They
charge a flat $16 a month per 64mb. Hughes wants $26 a month for this.

These guys seem like the way to go.....as far as I'm concerned that
over priced Windows '95 only peice of of shit DirectPC can go suck
dirty donkey balls!

Space success: MIREX QSOs made with four schools

''Yes, Yes, Yes.'' That was the reaction of Bruce Burke, WB4YUC, in late December as he helped students at Silver Lakes Middle School in North Lauderdale, Florida, talk with US astronaut John Blaha, KC5TZQ, aboard the Russian space station Mir. The contact--the first scheduled school QSO between unlicensed students and a NASA astronaut-ham living on board Mir--marked a new page in the history of ham radio in space. On Friday December 27, Blaha spoke with 17 students at the Silver Lakes Middle School. Halfway through the contact, Mir Commander Valery Korzun extended his greetings to the students and congratulated them for being the first Americans to take part in this kind of contact. At the end of the QSO, the students wished Blaha a happy new year. School group contact coordinators for the Motorola ARC Kai Siwiak, KE4PT, and Burke said signal strength was outstanding throughout the pass.

The FCC only recently approved third-party contacts with Blaha from the Russian Mir space station. However, the FCC's permission only extends through Blaha's mission. Over the past year, the SAREX team has worked closely with the Mir International Radio EXperiment (MIREX) team in the United States, the Space Amateur Funk EXperiment (SAFEX) team in Germany and the Mir Amateur Radio EXperiment (MAREX) team in Russia to allow unlicensed school students in the US to talk to the astronauts on Mir.

Three other MIREX QSOs also went off on schedule. On Saturday, December 28, students at Granby High and Mary Calcutt Elementary schools in Hampton, Virginia, successfully contacted Blaha aboard Mir and got to put a dozen questions to the astronaut. Blaha attended Mary Calcutt and graduated from Granby High School in the 1960s. The 10-minute contact was conducted from the Amateur Radio

satellite station exhibit, KE4ZXW, at the Virginia Air and Space Center. Blaha told the students he had some Granby/Calcutt memorabilia on board Mir that he expects to return to the schools.

Monday, December 30, students at The Johnson School in Warrenville, Illinois, got to ask Blaha how the Mir crew emptied the trash. In all, the students got to ask 15 questions as an audience of some 900 people (including approximately 450 youngsters) looked on. Enthusiasm at all three schools was high despite the fact that the students were on Christmas break, and volunteers, parents and teachers had to take time away from their holiday activities to arrange for equipment and operators.

Friday, January 3, students at Ririe Elementary School, Ririe, Idaho, enjoyed a successful 10-minute QSO with Blaha. Seventeen excited third graders and their teacher, Tina Anderson, got to ask questions
of the astronaut.

As a result of the QSOs, all four schools got a lot of media attention. ''These Mir QSOs are so very important since competition is accelerating against SAREX being selected as a payload on the last few orbiting shuttle missions of 1997 and 1998 prior to International Space Station activities,'' said Rosalie White, WA1STO, ARRL Educational Activities Department manager.

Four more schools have been scheduled for contacts before the end of Blaha's mission in mid-January. Jerry Linenger, KC5HBR, will take Blaha's place on Mir.

Schools wishing to arrange contacts with astronauts aboard a US space shuttle carrying the SAREX payload should submit a SAREX application to the ARRL Educational Activities Department (EAD), e-mail ead (at) arrl.org. More information about the MIREX and SAREX programs is available at http://www.arrl.org or check the Mir Web page at http://www.osf.hq.nasa.gov/mir/.

31-Dez-96 22:05:12: TS Kelso has written to the theme
"NORAD Two-Line Orbital Element Set Format":

...

> Data for each satellite consists of three lines in the following format:

...

> Line 1
> Column Description
> 01-01 Line Number of Element Data
> 03-07 Satellite Number
> 10-11 International Designator (Last two digits of launch year)
> 12-14 International Designator (Launch number of the year)
> 15-17 International Designator (Piece of launch)
> 19-20 Epoch Year (Last two digits of year)
^^^^^ ^^^^^^^^^^

Hei,

I'm interested, how looks out the Epoch Year in 2000.

Was it 00 or 100 ?

This is importend, because I'm asking me, how many calculation-
programs work after 1999.

So long !

Rainer

P3D will have more power, but from what I understand that power will
be used to have more than one mode active at the same time, IE the
power will be spread over more bandwidth. So you'll still need at
least a minimum Oscar 10 class receiving station for most activities
near apogee. At perigee it should kick butt, but it will spend a lot
more time out toward apogee so you should plan your station accordingly.

One big advantage will be the 3-axis stablization it will use.
That means the gain antennas will always be nadir pointing.
The problems we had with O10 and O13 due to poor squint angles
should be gone. It won't have to switch to its omni antennas at
perigee. And spin modulation shouldn't be an issue either. This
will lessen Earth station requirements somewhat. I don't know
if omni antennas will suffice, though. The receivers on P3D
won't be any better than those on O13, so you'll still need a
fair amount of uplink ERP even with gain antennas on the satellite.
I suppose you could use an amp into an omni, but it seems to me to
be better to use steerable beams for both up and down links.

>and tried to coordinate before they moved.

Hmm, seems to me that there was somewhat of an uproar among the amateur satellite community when APRS started up on 145.79, and they were basically ignored. I think it serves the APRS crowd right.

Like it or not, 145.8 is within the satellite band, and the APRS people knew full well how close they were to it when they started up. Only thing is that they weren't terribly worried about it, because all they'd be doing is drowning out the satellites to ground stations. Now that the situation is reversed, they're yelling.

145.79 is supposed to be for experimental use, and once APRS was out of the experimental stage, long ago, they should have moved off.

APRS is a great program, but IMHO the people who placed it so close to the satellite band when it's specifically /designed/ for wide-area coverage and high-output relays were inconsiderate.

Now, 145.2, that's another story.

Hello,

I'm looking for an inexpensive, moderate to good quality, wideband 137MHz
receiver for apt / wefax, used or new. Also, any other related equipment
for this (hobby for me) such as pre amps, antennas, dishes, software, etc.
Primarily interested in used gear but recommendations on the best of the
new gear appreciated. Anyone have any recommendations or anything for sale?

Thanks for your help. BTW.. I do have Dr. Ralph E. Taggart's book on
Weather satellites.

I had WISP running fine with a PK96 TNC set as a TNC-2. I recently got a 9600 baud card for my PK900 TNC, and when I set it up to run in place of the PK96, NOTHING worked. I reset the TNC type to PK900, and even with strong signals, nothing appears on MSPE. I reset the TNC type to TNC-2, with non improvement. Does anyone here have a PK900 running with WISP?

WHAT AM I DOING WRONG?

Hi Tom... CONGRATULATIONS!

John is a member of the MIR crew, thus your QSO was with the MIR and Doc Dave
should be able to provide your QSL card. I haven't heard of any other schemes
for cards from KC5TZQ. The card from Dave may or may not reflect "which"
cosmonaut/astronaut was at the control... so just keep your own log of the
contact, and annotate the card yourself if Dave doesn't. I've not worked them
on voice, only packet... but I know the THRILL! I've made 13 shuttle contacts
in the past 3 years, and the excitement never seems to diminish.

SB SAT @ AMSAT $ANS-005.02
MIR QSOs MADE WITH SCHOOLS

HR AMSAT NEWS SERVICE BULLETIN 005.02 FROM AMSAT HQ
SILVER SPRING, MD, JANUARY 05, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-005.02

''Yes, Yes, Yes.'' That was the reaction of Bruce Burke, WB4YUC, in
late December as he helped students at Silver Lakes Middle School in
North Lauderdale, Florida, talk with US astronaut John Blaha,
KC5TZQ, aboard the Russian space station Mir. The contact--the
first scheduled school QSO between unlicensed students and a NASA
astronaut-ham living on board Mir--marked a new page in the history
of ham radio in space. On Friday December 27, Blaha spoke with 17
students at the Silver Lakes Middle School. Halfway through the
contact, Mir Commander Valery Korzun extended his greetings to the
students and congratulated them for being the first Americans to

take part in this kind of contact. At the end of the QSO, the students wished Blaha a happy new year. School group contact coordinators for the Motorola ARC Kai Siwiak, KE4PT, and Burke said signal strength was outstanding throughout the pass.

The FCC only recently approved third-party contacts with Blaha from the Russian Mir space station. However, the FCC's permission only extends through Blaha's mission. Over the past year, the SAREX team has worked closely with the Mir International Radio EXperiment (MIREX) team in the United States, the Space Amateur Funk EXperiment (SAFEX) team in Germany and the Mir Amateur Radio EXperiment (MAREX) team in Russia to allow unlicensed school students in the US to talk to the astronauts on Mir.

Three other MIREX QSOs also went off on schedule. On Saturday, December 28, students at Granby High and Mary Calcutt Elementary schools in Hampton, Virginia, successfully contacted Blaha aboard Mir and got to put a dozen questions to the astronaut. Blaha attended Mary Calcutt and graduated from Granby High School in the 1960s. The 10-minute contact was conducted from the Amateur Radio satellite station exhibit, KE4ZXW, at the Virginia Air and Space Center. Blaha told the students he had some Granby/Calcutt memorabilia on board Mir that he expects to return to the schools.

Monday, December 30, students at The Johnson School in Warrenville, Illinois, got to ask Blaha how the Mir crew emptied the trash. In all, the students got to ask 15 questions as an audience of some 900 people (including approximately 450 youngsters) looked on. Enthusiasm at all three schools was high despite the fact that the students were on Christmas break, and volunteers, parents and teachers had to take time away from their holiday activities to arrange for equipment and operators.

Friday, January 3, students at Ririe Elementary School, Ririe, Idaho, enjoyed a successful 10-minute QSO with Blaha. Seventeen excited third graders and their teacher, Tina Anderson, got to ask questions of the astronaut.

As a result of the QSOs, all four schools got a lot of media attention. ''These Mir QSOs are so very important since competition is accelerating against SAREX being selected as a payload on the last few orbiting shuttle missions of 1997 and 1998 prior to International Space Station activities,'' said Rosalie White, WA1STO, ARRL Educational Activities Department manager.

Four more schools have been scheduled for contacts before the end of Blaha's mission in mid-January. Jerry Linenger, KC5HBR, will take Blaha's place on Mir.

Schools wishing to arrange contacts with astronauts aboard a US space shuttle carrying the SAREX payload should submit a SAREX application to the ARRL Educational Activities Department (EAD),

e-mail ead (at) arrl.org. More information about the MIREX and
SAREX programs is available at http://www.arrl.org or check the Mir
Web page at http://www.osf.hq.nasa.gov/mir/.

[ANS thanks the ARRL for the news report.]

SB SAT @ AMSAT $ANS-005.03
TWO P3D KEY WORKERS DEPART

HR AMSAT NEWS SERVICE BULLETIN 005.03 FROM AMSAT HQ
SILVER SPRING, MD, JANUARY 05, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-005.03

AMSAT-NA's Vice President for Engineering, Dick Jansson WD4FAB announced January 3 that his Assistant Vice President for Engineering, Stan Wood, WA4NFY, has new employment in Colorado, making him unavailable for further work on P3D after sometime in February. In the meantime, Stan will be devoting all the time he can to completing the satellite antenna work he has been doing for the past several years. Dick noted further that this news is doubly bad because Stan's wife, Mary, has been a great help during the past six months, acting as Office Manager for the Phase 3D Integration Laboratory.

Dick stated for ANS:
"One of the inexorable facts of life in a project like P3D is that people need to live their lives and most of the participants need to work (real) jobs for a living. Most of those of you who do need to so work also occasionally are subject to new job opportunities that cannot be turned away. We are at that threshold with two of our long standing key volunteers,
Stan Wood and his dear wife Mary Wood. Both of these fine people are highly
accomplished pilots in the world of business aviation. It has very recently
come to pass that Stan and Mary have both been offered new opportunities in the Colorado area, and they have accepted this very interesting situation.

Stan and Mary will depart the Florida scene in a very short while and move to their new assignments in Colorado."

The impact to the P3D Project will be felt almost immediately. The up-side

of this all is that Stan is very close to completing the flight antennas for
the spacecraft, his *major* challenge and accomplishment over the years.

Mary Wood has been a key participant at the P3D Laboratory as the Office Manager, keeping all of us on our toes and doing things properly. Both of these super people will be sorely missed at every turn in the project as we

push on to launch later this year. Stan and Mary will depart the Florida area with our fondest wishes for their new jobs and with our deepest appreciation for their help on the project. We would not have been able to

accomplish what we have without their help." Dick concluded by re-affirming
AMSAT's commitment to complete and launch Phase 3D in 1997.

AMSAT President Bill Tynan, W3XO, and Executive Vice president Keith Baker, KB1SF, echoed Dick's statement. "We will all miss Stan and Mary, and their

contributions to the Phase 3D effort" Bill said.

Those who would like to contact Stan and Mary and thank them for their service to AMSAT and wish them well in their new endeavor, may do so at their email address: n280ra@aol.com

[ANS thanks BJ Arts, WT0N, for this report]

SB SAT @ AMSAT $ANS-005.05
LINENGER TO REPLACE BLAHA

HR AMSAT NEWS SERVICE BULLETIN 005.05 FROM AMSAT HQ
SILVER SPRING, MD, JANUARY 05, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-005.05

Astronaut Jerry Linenger is scheduled to replace John Blaha aboard Mir. He's scheduled to be launched on STS-81 (currently set for launch on January 12) and will return on STS-84 (scheduled for May).

Jerry is the first of the long term Mir astronauts license for a previous shuttle mission before his assignment to a Mir
mission who had an active ham license before his assignment to a Mir mission. He earned the call sign KC5HBR while training for his only previous spaceflight, STS-64.

As far as third party agreements go, the temporary third party agreement which permits John Blaha to talk to unlicensed students expires when John leaves Mir. So it will be illegal to permit non-hams to talk to Jerry until the paperwork is approved for Jerry's third-party agreement.

Unlike the previous shuttle-Mir astronaut (Norm Thagard, Shannon Lucid, and John Blaha) who have had many spaceflights before their trips to Mir, Jerry's only experience is his eleven days during STS-64.

Also unlike the previous Mir astronauts he's got a family which is just starting. He has a one year old son and another child expected in June. His wife Kathy is actually planning on going back to Russia after his launch since she works for the NASA office at Star City as a medical trainer and will be supporting Mike Foale's training. Currently she's planning on coming back to the U.S. for the birth of her second child, which is due after Jerry's return. However Jerry is quite aware that he may be in space while his second child is born if there are any delays.

Jerry is scheduled to spend 132 days aboard Mir, but of course that may change for other reasons. He will become the first U.S. astronaut to perform an EVA from Mir (wearing a Russian spacesuit).

His full official NASA biography is available on the NASA Web site - http://www.jsc.nasa.gov/Bios/htmlbios/linenger.html

Jerry Linenger KC5HBR said -"Maybe I'm the right person for this kind of mission because I'm not a real good communicator. I could live without a telephone. So car phones and this great revolution we've had, does not phase me. If I were by myself without my family I probably wouldn't have a phone in my house so I could have some peace and quiet. I enjoy talking on the ham [radio], but I think I'm going to be looking out the window more than just talking. [As far as] news from home we have a little bit of E-mail capability and things like that. So as I want the news I'll be grabbing it. My old alumni University of North Carolina and I've been a big Michigan fan, college basketball I enjoy. So I'll be looking for that information."

In the past astronaut's activities have changed, especially after long periods in space. So while Jerry may not plan on using the radio much while he's in space, that may change over time.

[ANS thanks Philip Chien, KC4YER, Earth News - space writer and consultant for this news item.]

SB SAT @ AMSAT $ANS-005.06
P3D S BAND KIT INFO

HR AMSAT NEWS SERVICE BULLETIN 005.06 FROM AMSAT HQ
SILVER SPRING, MD, JANUARY 05, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-005.06

An S-Band to 70cm Receive Converter for Phase 3D
A kit of parts for this project will be available from the end of January
or
early February. The kit comprises of all the components from the parts list

including a 109.333 MHz crystal, and tinplate box from Piper Communications
mentioned in the notes. A reprint of the article which appeared in The
AMSAT Journal and OSCAR News with additional construction
information is also included.

To further simply construction, the PCB to be supplied with the kit has
been modified to include plated through holes. This will remove the need
for the wire feedthroughs used for all earth-grounded connections. The
use of a plated through holes printed circuit board will significantly
reduce construction time and give a professional finish to the project.

The kit will be available from the author at the address below.
Cost: 66.80 British pounds (about US $105.00)
Postage: United Kingdom: 1.90 British Pounds
Europe: 3.75 British Pounds
United States, VE, Z1, VK: 4.75 British Pounds
(about US $7.50)
All non-UK orders will be sent by small packet air mail and include
international recorded delivery. Insured post is available to most
destinations if required. Checks and international money orders in
British sterling may be sent to:

David Bowman, G0MRF
31 Benson Close
Hounslow, Middlesex
England, TW3 3QX

[ANS thanks The AMSAT Journal editor Russell K. Tillman, KC5JVB,
for this product information.]

SB SAT @ AMSAT $ANS-005.07
BEST FIST NOMINATIONS DUE

HR AMSAT NEWS SERVICE BULLETIN 005.07 FROM AMSAT HQ
SILVER SPRING, MD, JANUARY 05, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-005.07

Judging by the activity levels observed at W2RS (especially on
RS-10 and RS-12), OSCAR SKN '97 was a great success, with lots of
fun for all who took part.

Some nominations for "Best Fist" have already been received. If
you haven't yet sent yours in, please take a moment to nominate
someone you worked. To submit a "Best Fist" nomination, please
address it via packet radio to W2RS @ WA2SNA.NJ.USA.NA or W2RS @
GB7HSN.#32.GBR.EU (whichever is closer to you), via the Internet
to <w2rs@amsat.org>, or via "snail-mail" to W2RS' callbook
address. Those nominated will be featured in a bulletin sent to
Amateur Radio publications and posted to ANS and AMSAT-BB in
early February

[ANS thanks Ray Soifer, W2RS, for this update.]

SB SAT @ AMSAT $ANS-005.08
S. A. YOUTH TO TALK TO MIR

HR AMSAT NEWS SERVICE BULLETIN 005.08 FROM AMSAT HQ
SILVER SPRING, MD, JANUARY 05, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-005.08

On Sunday 5 January, 1997, many young
South African youth will be talking to MIR as part of the ARISAS ,
Amateur Radio in South African Schools project. ARISAS
had hoped to include youth from other African countries but due to
third party restrictions it was not possible in the few days available to
make the arrangements.

ARISAS has arranged to cover the link up on SW as follows;

Sunday 5 January
16:30 - 17:10 UTC 7205 KHz (250 kW) beaming north from Johannesburg
3215 KHz 100 kW omni

ARISAS is a joint project of the SA Radio League, SA AMSAT and the SA
Amateur Radio Development Trust.

[ANS thanks Hans ZS5AKV, for this report.]

SB SAT @ AMSAT $ANS-005.09
WEEKLY SATELLITE REPORT PT 1

HR AMSAT NEWS SERVICE BULLETIN 005.09 FROM AMSAT HQ
SILVER SPRING, MD, JANUARY 05, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-005.09

FO-29
(Uplink 145.9-146.0MHz CW/LSB, Downlink 435.8-435.9MHz CW/USB)
JARL changed the FO-29 operating schedule. 9600bps operation was
canceled.
31Dec - 6Jan : Digi-Talker
[ANS thanks Masa, JN1GKZ, for this update.]

MIR:
(Uplink 145.2MHz FM, Downlink 145.8MHz FM)
The above split is used for both packet and voice operation.
See ANS-005.01 for more information.

SAFEX,
(Uplink 435.750MHz FM, Downlink 437.950MHz FM,
Subaudible tone 141.3 Hz)
The repeater appears to be down at this time and no further
information is available.

RS-12:
(Uplink 21.21-21.25MHz CW/SSB, Downlink 29.41-29.45MHz or
145.91-145.95Mhz CW/SSB)
The sat is giving extremely good downlink signals on 2 meters. In
this period of poor propagation on 15 m, the T-mode is providing very
easy access to the satellite. Interesting DX activity has been spotted
in Europe with stations in Egypt, Crete, Cameroon, etc.
[ANS thanks Stefano Badessi, PA3FWP, for this report.]

RS-10:
(Uplink 145.865-145.905MHz CW/SSB, Downlink 29.36-29.4MHz CW/SSB)
Operating normally. Very busy with lots of QSOs heard over
north America and Europe.

RS-15
(Uplink 145.858-145.898MHz CW/SSB, Downlink 29.354-29.394MHz CW/SSB)
Operating normally.
(Hint: If SSB doesn't work for you, try CW. CW is very easy
to hear on the downlink!)

KO-23
(Uplink 145.85, 145.9MHz FM, Downlink 435.175MHz FM,
9600 Baud FSK.)
KO-23 downlink frequency is approximately 4 KHz low, but all other
operations are normal.

.KO-25:
(Uplink 145.87MHz FM, Downlink 436.5MHz FM,
9600 Baud FSK.)
KO-25 continues to send messages "Frames heard from LOADER-9" The
satellite is closed to file uploads.

[ANS thanks Jim Weisenberger, AA7KC, for his reports on
KO-25 and KO-23.]

AO-27:
(Uplink 145.85MHz FM, Downlink 436.8MHz FM)
December-08-1996.
Good conditions on the bird and good QSO in it's orbits
over Europe during the weekend Heard: F6HLG, DG5MNC,
EB5BCF, EA5AAJ, DH5JY, DL2DRD etc
[ANS thanks Miguel A. Menendez, EA1BCU, for this report.]

As of NOV 2, the AO-27 schedule is as follows:

TEPR 4 = 16 = 8 Minutes in Length
TEPR 5 = 52 = 18 Minutes in Length

TX-3 is on Mid Power during TEPR 5.

This will have the TX turn on 8 Minutes after the satellite
enters the sun for a duration of 18 Minutes. This is a "back to US
Latitudes"operation.

N4USI, AO-27's current Command Station sends his thanks all for
their messages about the satellite turning on later than expected. He
reports he's deliberately letting the "turn on" time drift later
(for about 4-5 Minutes) so stations in the southern latitudes can also
have a chance to work AO-27. Every few months he will be letting the
turn on time drift like this to give more stations a chance to make
contacts thru the satellite.
[ANS thanks Michael, N4USI , AO-27 Control-op, for this
update.]

AO-10:
(Uplink 435.030-435.18MHz CW/LSB, Downlink 145.975-145.825MHz CW/USB)
Operating normally. Stacey E. (Chuck) Mills, W4SM, reports that
Ken Ernandes is looking into getting updated keps. Though the orbit
doesn't change very fast, things are now off by a bit, especially at
perigee. Mills calculated the blon/blat, -125/5, about one year ago and
is waiting to see if predictions for this year hold up.

Below is a 14-day update on the AO-10 Keps from the NASA OIG RAID RBBS.
AO-10
1 14129U 83058B 96299.11613815 -.00000305 00000-0 10000-3 0 4631
2 14129 25.8792 182.5891 6052907 60.2572 346.3435 2.05882271 72548
[ANS thanks Ken Ernandes, N2WWD, for these keps.]
.A lot of activity was noted this weekend when the sat was over
America. The bird was still workable up to phase 60. Still a bit of
FM-ing when operating in CW
[ANS thanks Stefano Badessi, PA3FWP, for this report.]

AMSAT-OSCAR-16 (PACSAT)
(Uplink 145.9, 145.92, 145.94, 145.86MHz FM, Downlink 437.0513MHz SSB,
1200 Baud PSK.)
Continues in good working order.
[ANS thanks Miguel A. Menendez, EA1BCU, for this report.]

FO-20
(Uplink 145.9-146.0MHz CW/LSB, Downlink 435.8-435.9MHz CW/USB)
Strong downlink signal and very busy with activity.

OSCAR-11
Good, steady signals have been received from OSCAR-11
on 145.825MHz. FM, 1200 Baud PSK
ANS thanks Clive Wallis, G3CWV, for this information.]

IO-26 (ITAMSAT):
(Uplink 145.875, 145.9, 145.925, 145.95MHz FM, Downlink 435.822MHz SSB,
1200 Baud PSK.)
Operating normally. Some report indicate that the downlink
signals from the bird are stronger.
[ANS thanks Richard W L Limebear, G3RWL, for this
report.]

DO-17(DOVE)
(Downlink 145.825MHz FM, 1200 Baud AFSK.)
Jim White reports that DOVE had timed out on December second.
DOVE's software was then uploaded again to correct the
time out problem. Signals from Dove are once again being
received.
[ANS thanks Jim White, WD0E, and Sergio Adrian Gorgone,
LW7DXF, for this information.]

LUSAT-OSCAR-19
(Uplink 145.84, 145.86, 145.88, 145.9MHz FM, Downlink 437.1528MHz SSB,
1200 Baud PSK AX.25.)
This satellite is normally working.
[ANS thanks Miguel A. Menendez, EA1BCU, for this report.]
.
WEBERSAT (WO-18)
(Downlink 437.104MHz SSB, 1200 Baud PSK AX.25.)
WeberSat (WO-18) is operational with the new telemetry/housekeeping suite
active. The satellite is currently sending battery WOD:
16 - Battery 1 Voltage
17 - Battery 2 Voltage
18 - Battery 3 Voltage
1B - Battery 6 Voltage
1E - Solar Array Voltage
21 - BCR +10 V Bus

The taking and sending of photos and spectra will begin again soon.
Check it out!
[ANS thanks Tommy Davis, IK3WVJ, for this report.]

Hi

The windows program i have not seen but if you go to
WWW.AMSAT.ORG it will direct you to their FTP site which has all
the telemetry decoders ya will ever need. I use one called i
believe DUVTLM or something like that and it works great, its DOS
based and comes from Italy. Hope that helps ya!

----snip-----

It seems, after reading some of the stuff (not too technical :)) that
happened during the WRC-95(?), that Teledesic was already assigned it's
spectrum that it wanted and that bit o' spectrum was no where near the 2m
or 440Mhz bands. In fact it was in the Ghz region.

You do have a point about saving our 2m and 440 bands but Teledesic is not
the threat.

TTYL,
Mike

Cross-posted to: rec.radio.amateur.antenna,rec.radio.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.policy,rec.radio.amateur.space,rec.radio.swap

Dear Fellow Amateur Radio operators,
Remember the ARRL bulletins from last summer warning us of a threat to our 2 meter and 70 centimeter bands?? Read on.
An article in the December 23, 1996 issue of USA today discusses the development of Teledesic, which will involve putting 840 loe-earth orbit satellites (LEOS) into orbit.
Keep in mind that these satellites are the beginning of the threat to our 2 meter and 70 cm (440 MHz) bands. If these things go up, we had better expect our 2 meter and 70 cm bands to shrink up, or even vanish. After these satellites go up, more companies will want their satellites in orbit and do similar things.
If you have not taken time to write your Congressmen, Representatives, etc. to ask them to help defend our bands, DO IT PLEASE. I am getting great cooperation from Sen. Domenici here in New Mexico. Get other Amateurs involved. Announce this at meetings. Sign petitions and send them to your government officials and to the FCC (WRC-97). But please be courteous when writing. Emphasize the importance of these bands for us (search & rescue, traffic handling, etc.).
These bands are extremely important to us, and we cannot lose them. Please do something and don't give up.
73,
Brian, N5ZGT

I think the move to 145.800 was a very bad move for the MIR. With APRS
operating on 145.790 and has been for a few years there are going to
be problems. I have already noticed that here the bleed over is
noticable from station at ranges of 30 miles away. (I'm in the mtns.)
There may have to be some changes made if this keeps happening either
on the MIRS side or on the APRS side.

73,
Jamie - KE4HTM

63. MIR 440 RPTR ?

Newsgroup: rec.radio.amateur.space
Date: 1997-01-06 00:00:00 UTC
From: kleite@gtec3.ndhm.gtegsc.com
Message-ID: <5arek5$ti7@news1.chnt.gtegsc.com>
Source record: 20416

Hi There,

Thanks for reading my post, I am curious if anyone has heard the RPTR
on board the MIR recently ???? If so could you please give me the RPTR
frequencies and PL ???

Thanks Keith ....

Radio Meteor Observation Bulletin No. 41 January 1997

1. FORWARD SCATTER METEOR OBSERVATIONS

Observer: Maurice De Meyere
Location: Deurle, Belgium (3 37' E, 51 00' N)
Frequency: 66.51 MHz
Transmitter locations (all stations of more than 10 kW):
66.35 MHz, Klaipeda, Lithuania 12 kW, 05h00-22h00
66.41 Siedlce Poland 39 04h57(Sun05h57)-02h00(Sat03h00)
66.47 Viesintos Lithuania 12 05h00-22h00
66.50 Sofia Bulgaria 10 24hrs
66.56 Poznan Poland 56 04h57(Sun05h57)-02h00(Sat03h00)
66.62 Budapest Hungary 100 24hrs
66.68 Valmiera Latvia 20 06h00-22h00
Antenna: crossed Yagi, 4 elements, astronomical azimuth 270 deg (= E),
elev 27 deg
Antenna amplifier: 25 dB max level 90 dBmuV
Receiver: commercial, Progresson 447A, TESLA (Bratislava)
The receiver was calibrated with a Marconi TF2008 signal
generator. Sensitivity: 5 muV (modulation frequency
1000 Hz, frequency sweep 38 kHz) at (S+N)/N = 20 dB

Observing method: automated setup, 150 samples/second, 8 bit resolution.
[Time and details of all individual meteor reflections are stored
on file in the University of Ghent format (Prometeos), and are
available for further analysis. Reduction software for DOS and
Windows available].

December 1996
Geminids, Ursids

Raw counts of reflections with a duration of at least 0.027 s
during one hour interval starting at UT:

Dec | UT
```

Notes:
. local time = UT + 1 hour.
. Geminid activity on Dec 12-14.
Best forward scatter conditions for this setup between 2h and 8h UT.

Maurice De Meyere

Observer: Werfried Kuneth
Location: Ferndorf, Austria (13 37' E, 46 45 ' N)
Antenna: 3 element Yagi
Receiver: AR-8000 at 48.2500 MHz, SSB mode, no preamplifier.
Transmitter: 150 kW TV video carrier in Madrid (Spain),
distance 1550 km, southwest.
Observing method: automatic setup using FFTDSP42t software by AF9Y to
record the audio signal. 20 channels of 2 Hz width are used for
meteor identification.
More details see <http://www.net4you.co.at/user/kuneth/info.html>

I have also included some of the radio meteor shower peaks in 1996
and 1995 at this address, each covering about 1.5 hours of the showers.

From the saved graphic files, the following raw counts are computed:
(minimum reflection duration of 3 seconds):

```

Dec | UT
```

Notes:
. the Geminids showed up very well from Dec. 12 to Dec. 14.
. from Dec. 21 - Dec 22 the Ursids were recorded.
. a dot (.) after the number stands for a lower observation period: 20-40 min.
. blank value means either few or no data available, interference,
power failure or transmitter shutdown.
. From 02:00 - 04:00 UT a different transmitter is reported.
Precision is therefore lower at that period.
. local time conversion: 1 hours ahead of UT (07h00 UT is 08h00 local)

Werfried Kuneth

Observer: Kimio Maegawa
Transmitter: 50 W CW 53.7500 MHz
Transmitter antenna: 2 element Cross Yagi 4dBi, zenith
Transmitting Location: Sabae city (136 11' E, 35 56' N)
Receiver: IC726 500 Hz BW SSB, sensitivity -150 dBm sensit
Receiver antenna: 3el Yagi 7 dBi (elev 70 deg, az 150 deg = SE)
height 10 m
Receiving Location: Ohno city (136 53' E, 36 00' N)
Data processing : Receiver output is fed into DX2-66 MHz PC and analyzed by
AF9Y's FFTDSP42 software.
Then stored every 4.22 min automatically with GIF format.

Play back GIF files and count echoes manually by the doppler
shift rejecting tropo signal or airplane echo.

A: all echoes L: long echoes (T > 2.5 s)

2. ANNOUNCEMENT

Making RMOB results more widely-known

As some of you may already be aware, thanks to the kind offices of Chris Steyaert, I have been able to analyse and publish some of the recent RMOB data in the IMO's journal "WGN", partly to thank all the observers involved, but partly to make more people aware of what radio meteor work is currently being carried out. I am also interested to discover what correlations are or are not present between different observers' data collected at the same time. This may well help refine our understanding of radio meteor showers (especially the daytime showers which are naturally not otherwise observable), and also to clarify problem areas, such as periods of Es, local interference or other difficulties. My intention is to continue to analyse and produce reports from recent RMOB data as part of the on-going series of SPA Meteor Section results in "WGN" and the "SPA News Circulars".
However, Chris Steyaert also thoughtfully sent me the complete series of RMOBs, and rather than simply let these lie and be forgotten, I would like to at least summarize the main points of what they show, perhaps as annual or six-monthly articles, again, so that more people will be made aware of just what radio observing is being carried out now, and what has been done in recent years. As it is over three years since the initial RMOB in August 1993, it is entirely possible that some of the observers involved may have analysed their data themselves, and perhaps even published articles from their data. I have no desire to duplicate any such efforts, especially as the task of producing these summaries is not a short-term proposition. Consequently, if anyone has carried out such analyses or published articles, I would be greatful if the people concerned would send me copies of what they have done with their data, or at least, let me know where and how they published their results.
All observers will naturally be acknowledged in anything I publish, and I would like to thank you in advance for your cooperation. Good luck with all your observing!

Alastair McBeath

3. ABOUT THE RMOB

The RMOB is an independent initiative of some workers in the field of radio meteor scatter observations and data reduction. It started in August 1993 in order to spread rapidly the Perseid results via E-mail. Since then, it has appeared monthly, and it has gradually been expanded. In regularly publishing summaries of observations, potential radio observers are kept up to date of existing installations, possibilities and limitations of radio meteor observations. In the long run, there should be sufficient observing

stations to cover the whole globe, allowing to detect stream outbursts which may remain unnoticed visually.

RMOB contains typically: summaries of recent observations, equipment data, first results of stream activity by radio methods, relations between radio and optical meteors, references to other publications in the field of meteor astronomy and radio scatter techniques, announcements of meetings, short questions and answers, non-commercial (second hand) sale of radio equipment, available software.

Contributors are mentioned, and interested persons are asked to contact them directly.

RMOB can be copied freely in unabridged and unmodified form. Extracts sh

66. Re: MIR 440 RPTR ?

Newsgroup: rec.radio.amateur.space
Date: 1997-01-06 00:00:00 UTC
From: Mike Cat <mcat@nosuchplace.net>

Keith J. Leite wrote:

> Thanks for reading my post, I am curious if anyone has heard the RPTR
> on board the MIR recently ???? If so could you please give me the RPTR
> frequencies and PL ???

I tried to simply receive any of MIR's transmissions repeatedly on
1/4/97 but to no avail. I am using the latest information:

Voice uplink: 435.750
Voice dwnlnk: 437.950

Also

Voice and Packet Uplink at: 145.200 Downlink: 145.800

A recorded greeting should also be found at: 437.925

Again, though, I have verified my Keps and all my settings with STSPlus
(and have co-verified with other ops), but have not heard anything from
any of these frequencies. I'm hoping to try again later this week.

I posted material some time ago regarding the Webb Laboratories Education & Professional Partnership Programs, unprecedented opportunities through which every faculty member, graduate student and undergraduate student (alternatively for the PP program - each member of a working group of designers) can achieve true ownership, at school, home and on the job, of powerful electronic CAE capability. The EP and PP Programs provide general, graphical nodal circuit analysis, RF/microwave-specific analysis, unconstrained nodal noise capability and true 'floating' two-nodes-per-port definition. In addition, the EP and PP Programs include the industry's most comprehensive transmission structure analysis/synthesis engine as well as the powerful SystemPlus suite of design tools for the wireless/receiver/system designer.

The complete EP or PP Program package, including over 500 pages of documentation, may be distributed department/group/consortium/company-wide with no restrictions, without expiration, and at no liability to the School, Group, Consortium or Corporation. EP/PP Program details, an editorial review and a growing example library may be found at:

http://www.webblabs.com/ep.htm

or

http://www.webblabs.com/pp.htm

I ask that you forward this announcement to potentially interested individuals. If you prefer, kindly reply with names and e-mail addresses of those to whom I should convey information directly. Thank you for taking the time to consider what has become a unique access and ownership opportunity for a great number of designers worldwide.

Wishing you a Happy New Year!

Brian:
I think you are suffering from 'Tunnel Vision'. Please put on the Wide Angle Lens and see the whole world! The FCC does not dictate to Canada, or any other country, with the exception of the USA, what bands it may use for communications. Do you think that the radio waves produced up here in Canada bounce off some invisible force field when they reach the 49th parallel? I don't think so. The 2 meter and 70 centimeter bands don't just belong to the USA and some congressman from the US isn't going to give a fat rats ass if I send him a letter from the Great White North anyway. I don't think I'm going to panic.
73s
Randy.
ps: I think its called the WWW... hmmmm... none of those 'W's stands for Washington, I guess they don't own the World Wide Web either.

I also have monitored this frequency on a very good visual
pass on 12/31 and did not hear traffic. I have monitored
this freqency before and heard several QSOs.

I need a 440 FM Xcvr that can handle the doppler shift.
I have three different 440 HTs and none have a tuning
step less than 5 KHz. Any suggestions?

Victor Gregg, KF4BUX

Hi Victor!

I have been using a 5 KHz step HT myself, along with a Realistic scanner
but to no avail. The only suggestions I can come up with:

1) Catch a 89 degree pass where the Doppler shift is minimal.
2) Buy yourself a dual band satellite rig.

I am planning on doing the latter sometime within the next few months
when the $$$$ is accumulated. I'm looking at the new ICOMs.

I have used this same HT to listen to DOVE (DO-17) many times on 2
meters. Even with Doppler, it's just fine.

I'm gonna keep trying to at least hear MIRs voice greeting the rest of
this week when both of our schedules are compatible.

Cheers!

Mike N1YHW

73. NORAD Two-Line Orbital Element Sets (TLE925)

Newsgroup: rec.radio.amateur.space
Date: 1997-01-07 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <5aulnn$ncj@blackbird.afit.af.mil>
Source record: 20327

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

Cross-posted to: rec.radio.amateur.antenna,rec.radio.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.policy,rec.radio.amateur.space,rec.radio.swap

Hi all i got a lote of replys about a vhf dummy load and i want to ask some of you would a 1watt Metal-oxide 5% work radio shack sells them thay carry the 10 ohms,100 ohms,1k ohms.

Or if not how about a 8 ohm non-inductive resistor 5% 20 watts

Please tell me if them will work.

77. Shuttle HF Experiment

Newsgroup: rec.radio.amateur.space
Date: 1997-01-07 00:00:00 UTC
From: marina <marina@rain.org>
Message-ID: <32D2650C.3638@rain.org>
Source record: 20331

Does anybody know where I could find the results of the HF experiment
that was conducted?

Thanks,

Tom King KA6SOX
tking@kcrw.org

Not that your suggestions are not valid, I think positive intervention from all hams on this issue should be mandantory.

However, FWIW: In my numerous years as a ham, I have seen our bands increased not decreased. With the exception of early ham radio prior to WWII.

How do you think taking away any of our bandwidth would be enforced?

The FCC cannot handle nor do they care to, the one simple 11 meter band that has become a thorn in the radio spectrum.

Deallocating 2 meters from Ham use would open it wide up to CBer's and disgruntled hams all over the world and it will probably become as useless as 11 meters has become.
For less than 30 bucks, any earth based station could easily jam the weak signal produced by those Commercial low orbit satellites.

I see any intervention by the government in deallocating the current spectrum assignments as opening pandora's box and obliterating the entire radio spectrum as we know it. And literally losing what little control of it they now have.

The entire radio spectrum will become one big 11 meter band, that he with the most power dominates, even if it means ruining it for everybody else in the process.

The government can't own what it can't control. How can they sell something they don't own in the first place.

Think about it!

DON'T PANIC!

Teledesic is not one of the "Little LEO Operators that are after 2m and 440. They are a "Big LEO Operator" (hence the financial ability to put up 840 satellites) who already have spectrum assigned, and it's not the ham bands.

BTW, if I recall correctly, The Bill Gates is part owner of Teledesic, which sparked some negative comments due to misunderstanding early on in the fracas.

N5ZGT de VS6UE/W4 K

How would satellites that are supposed to handle high volume traffic
sattle with narrow bandwidth like our precious 2m and 70cm?

Analogy:
Amateur HF RTTY cannot be over 300 bps but in the VHF area can
go as high as 19.2 kbps. Why? BANDWIDTH!

To accomodate high speed internet traffic, T1 (1.544 mbps) is already
getting tighter as hours go by. But Satellites are talking about T3
or even bunch of T4's (if there is anything called T4). How much do
our 2m and 70cm get to offer?

Don't worry. It seems to me that the microwave regions are more likely
to be where they get the bandwidth from.

73!

Randy,

While the original post was directed to a US-centric audience
the band threat is a worldwide issue. The LEO providers are
attempting to gain additional spectrum via the next WARC. So while
writing to a US congressman might not help much a letter to your local
legislator won't hurt a bit.

I heard the UHF repeater playing a recorded message regarding the new freqs the other day.
It saiunded about 30KHZ below the regular receive freq.
Havn't heard anything since though.

If the MIR UHF side is not able to transmit on more than one frequency at
a time [e.g. the usual case], then the activation of the recorded message
would explain the non-responsiveness of the repeater.

For what? All of us have to start somewhere! You have arrived in the friendliest place in the world, ham radio. Sort of like Internet without wires! <Huge grin>

Once you discover what all this is about, you may embark on a lifetime of discovery. At 44 years into this thing, I am still having fun and, for the most part, the people in it are WAY above average folks.

>Could anyone explain to me what is packet radio, amateur radio and the
>difference between them.

Amateur radio is the permitted use of a relatively large part of the radio channels by individuals who do not have to pay for the right to use the channels. If you look at your broadcast radio, your FM radio and your TV set, you will see they are marked in channel numbers. Never mind about the meaning of that, right now, just discover here that there are MORE channel numbers above and below and between those that you see!

Many, many more. Whole sections of the channels are used by different people for different things! Police, fire people, constuction crews, people sending I love you messages from a cruise ship - they ALL use these other channels and MOST of the time they have to get a LICENSE from the government to use one or more of them.

Hams have to get licenses too. However, the hams use whole chunks of channels. Each chunk has different characteristics. Some chunks can be used to talk directly from Podunk, Texas, to Sydney, Australia, direct! On a good day, you can do that with the power of no more than a FLASHIGHT!

Imagine that, shining a flashlight up in the air and having it seen in Australia! Not only that but your little flashlight can be seen by THOUSANDS of people, all over the world at the SAME TIME! And, its all for free (well, not the cost of the flashlight or the very little for the paper work of the license), totally free, any time of day or night, just holler hello!

It is a priceless, fascinating hobby.... MAGIC that even David Copperfield cannot top.....

Now Packet Radio is a form of radio that packages up blocks of text and numbers into small groups within a larger message. It uses the radio channel to communicate these chunks of text to someone else, and while it is doing it, it makes sure that the chunk was received correctly at the

other end of the circuit. It is just one of MANY forms of amateur radio, but note... it isn't used just by hams. It is also used by fire departments, astronaughts in space... you name it.

>What sort of equipment do I need

A transmitter and receiver that operate upon a channel or set of channels that can be used with a similar type setup on the other end. Cost can be very little or LOTS. Like dogs, or most anything else, some dogs are bigger than other dogs. Ham radio is competitive and the my dog is bigger than your dog deal exists here too! That's part of the fun! It leads to CONTESTS!

There, a well trained little dog can often bite the heck out of even far bigger dogs... expererience and dedication count, just like other sports.

>Does it work worldwide or do I have to be within a distance of (say a tower >or station)

All of the above!

You may talk direct from you to someone else, or go through what we call a repeater station to help you.

Either way, your station uses an antenna. You buy or build your own antennas, some of which need be no larger than a foot or less in size, to HUGE ones that can require towers more than 200 feet high with wire lengths of 2400 to 4000 feet long.

The controlling factor for the tower and antenna size is the channel area. Some channels take bigger antennas than others.

Owning a St. Bernard can be a chore... Using the channels that require the huge antennas above takes space only found out in the country, but there are TONS of channels that can be carried around in your hand or pocket!

<smile>

All dogs are welcome!

>Anything extra would be very valuable

Yes indeed. Go to Radio Shack or a book store or a library and look us up! Your local library is a fine place, or in any event, one of several books you can thumb through is "Now You're Talking", published by one of the fraternal organizations in the hobby called the American Radio Relay League.

If you take it home, the chances are you will be started on this stuff!

In even most smaller cities or even out in the country, chances are someone will know of a "ham operator." Seek the person out, guys and gals abound in this thing!

The rest is all MAGIC!

>pls drop me email direct

Not really. I hope I've answered it in such a way that you will come back here or seek the area that will let you start this fascinating journey!

>Thanks in advance
>
>waheeb
>

> Please tell me if them will work.

Check the construction of the metal oxide resistors (ask the
manufacturer if all else fails). They are typicaly fabricated by
depositing a thin layer of metal oxide on a ceramic body, and then
cutting away some of the oxide in a spiral down the length of the
ceramic core.

This is obviously not what you want in a VHF dummy load.
It is possible that other fabrication techniques are used, but
you need to check.

The "non-inductive" resistors sound like the way tp go to me.

I'm working on one of the electronics modules for the Phase 3D satellite to be going up this Spring. Does anyone on the net have any experience in designing space-qualified circuitry? I have lots of circuit design experience but have never designed anything for space applications.

What I need is practical advice on how radiation affects the design. I have been assuming that it's only an issue for small-geometry IC's like memory chips. My design is all analog and consists of LM324 op amps, LM339 and LM311 comparators, AD538 analog multiplier/dividers, 78L15 and 79L15 regulators, and some bipolar transistors. Can I assume that special rad-hard devices are not required? (I don't even think they exist.)

The P3D satellite will be in a highly elliptical orbit that passes through the Van Allen belts.

I would be interested in any comments from anyone with experience in this area. It would be helpful if you could list your qualifications in your reply. I'll check this newsgroup for the next couple weeks, but email replies will get to me faster.

Thanks,

Al Bloom N1AL

Hi Alan

I have build PHASE3D X-BAND transmitter control logic and we use
standard
bipolar and 74HCXXX devices on our board. You do not need any RAD-HARD
stuff on your
design. Bipolar devices are Ok. I have used LM358 and LM7815, MC33166T
Power devices should be derated and conduction cooled (Mounted to
enclosure wall).

We have mounted tantalium metal radiation shield plate over 74HCxxx
devices.
this is needed only for CMOS devices. According Karl Mainzer there
should be 3 gram / cm2
mass between space and CMOS semiconductor die.
Usually mass of satellite outside wall give enough mass if your module
have thick wall.

Some hints and tips

1. Derate component power handling to 3 - 4 time compared to ground
environment
In space there is only radiation cooling. We have used 3 times power
capability
handling on our design ..

2. Do not use EEPROM based memory or PLD's

3. MOSFETS are going to leak (Turn of voltage may be even negative)
after radiation.
if you use MOSFETS drive gat to negative side.

Best regards

Harri Leskinen, OH2JMS

Can ANYONE here give me a computer-designed plan to make a beam antenna that fits the following "rough-draft" parameters?

A 30 turn, logarythimic-spaced, Right-Hand Circularly-Polarized (RHCP) beam antenna for 144.3 MHz, on a manually-swiveling rear-mount boom,(made of 2" OD Aluminum tubing), with a mono-filar element,(made of bare #6 solid copper wire, commonly used by electricians as ground wire for a building's main box), with insulating "spreaders",(made of either 1/2" PVC, fiberglass rods or wood dowels).

My idea is to mount the boom vertically on a universal joint, which itself is mounted atop a 10' mast,(5' of the mast actually being below ground level in concrete), and to use pullies and counter-weights with the non-conductive guy ropes to actually TILT the antenna at the moon,(using a boom-mounted 3X rifle scope to aim it), so by turning 2 lockable cranks I can track the movement of the moon manually anywhere in it's path anywhere within 60 degrees from plumb,(by "plumb" I mean an exactly vertical position). The mechanics of it are much the same as those of the older mobile cranes they used to use on rural construction sites.

BTW: I am not open to the idea of using a yagi, so please don't suggest it.

Please reply via both, the newsgroup and email.

Thank you.

94. Air Pollution Really Sucks

I finally get my station tuned up to where I can post on Mir reliably, and with the frequency changes, here comes APRS. Is it true that APRS is on the satellite band as an experiment? If so we should try to collectively voice our opinions to the parties responsible for this temporary frequency allocation. We should lobby for a move of APRS off the satellite band. I'm going to put up an az-el rotator with beams, with tracking hardware in the near future, primary to work other satellites, along with Mir. I'm sure the beams will solve the QRM. But what about someone trying to work just Mir on a tight budget, there not going to be able to purchase all that satellite specific equipment. I just think the we here in North America got the wrong end of the stick in this whole frequency change thing. Oh, by the way I got that Air Pollution Really Sucks from an APRS operator.

96. Timer/receiver combo unit?

Newsgroup: rec.radio.amateur.space
Date: 1997-01-09 00:00:00 UTC

Happy New Year, all.

I'd like to be able to record (unattended) my favorite radio programs and features for later listening. Something like a VCR with multi-event programming would do the job nicely. Some have suggested using a VCR and a tuner connected to the audio input, but that would require going back and retuning the receiver to different stations between events, which is not possible in this case.

Any ideas? Thank you in advance.
Michael

Not only that, they will probably make it one big party line by
running a couple of gigawatts from their mobile on a pair of co-phased
cellular towers mounted at each end of their pickem-up trucks.
Cooking every thing for miles around from the radiation.

Me, too!

I bought a Reveal FM radio board for the PC (about $40 at Best Buy), with the idea of being able to program it as you suggest.

<flame> I got disgusted at the dain-bramaged software that came with it (only 10 presets, hard to set with fixed scroll rate, roundoff errors in freq display, . . .). I'd have kept it if I could have gotten specs for how to control it -- I'd have written a control program myself. But their "24/7" tech support line put me on permahold so I gave up and returned it. </flame> I could always buy another one if I decide to try it again someday. It seemed like a well-build piece of hardware.

Seems like you could build an integrated control out of an old XT with the FM radio card in it and an IR emitter to drive the VCR. If the VCR won't record sound without a video signal to sync to, put a CGA card in the PC; you could put a timestamp on the video to tell you when the audio was sent, freq, station/program ID, etc., in nice bold characters that would show up in fast forward / rewind.

If your existing FM receiver is IR controllable, then that opens other possibilities.

I agree, this is a product that is missing from the marketplace. Probably wouldn't be terribly hard for the VCR makers to implement, either; they already have the front end, what's a couple more chips for the FM broadcast IF and detector? They can sell an entire Walkman for $cheap. . . It'd be neat: an 8-hour stereo audio recorder! There's not much on the tube worth watching, anyway.

We can't be the only two who've felt this need. Ideas, anyone?

Hi Teddy,

Some thoughts on this interspersed with your text.

Teddy Bear wrote:
>
> Can ANYONE here give me a computer-designed plan to make a beam antenna that

>
> A 30 turn, logarythimic-spaced, Right-Hand Circularly-Polarized (RHCP) beam
> antenna for 144.3 MHz,

I'm not sure what you mean by log-spaced for a helical antenna (helix).
The helix is a spiral and is defined by circumference and pitch in
degrees. Log spaced relly makes no sense here. It does for yagis and
log-periodics and others, but not for helicals.

Also thirty turns for the 2m band is going to give you one ENORMOUS
antenna. Probably something on the order of 50 to 60 feet. Nice gain it
would have though, around 20.5 dB.

> on a manually-swiveling rear-mount boom,(made of
> 2" OD Aluminum tubing),

Rear mounting of a 60 foot boom? not likely. And the boom for a helix
has to be non-conducting and preferably low-loss fi it is a dielectric.
The interior of a helix supports a traveling wave and therefore needs to
be free of obstructions to that wave.

> with a mono-filar element,(made of bare #6 solid
> copper wire, commonly used by electricians as ground wire for a building's

Hummm, more like bend the boom of the antenna. Even with the u-joint
youve set up quite a cantelver and that is going to bend BIG-TIME. I'm
not sure what a bent boom helix is going to do. This proposal seems to
be getting further and further from realistic.

> a boom-mounted 3X rifle scope to aim it), so by turning 2 lockable cranks

>
> Thank you.

Well I can see some advantages to a helix over yagis, and I'm considering one myself for 2m, but I don't see why you don't want them for EME that's your call.

But you can get the same amount of gain as a single long helix by stracking several shorter ones in a box pattern. Four 8 - 10 turn helicals spaced approx 1 wavelength apart would be similar to one single 30 turn as far as gain. The booms would then be more managable at 15 - 18 feet. The groundplane screen however would be something like 15 feet square.

Maybe if we started with what your goals are, then we could find something more realistic to do. But if you insist on doing it with your rough specs tehn I can supply the relative cookbook plans. The helix is not all that complicated to need to go to a computer design.

Jim

Log spacing of the coil instead of even spacing.

> The helix is a spiral

Duh.

That's an old XYL's tale.

> Also thirty turns for the 2m band is going to give you one ENORMOUS

The length for MONO-filar would be about half that,(30 to 40 feet maximum).

> Nice gain it would have though, around 20.5 dB.

I expect 25-30 bB.

> > on a manually-swiveling rear-mount boom,(made of

As I said above... 40 feet max... Plus I did mention the use of guy ropes.

> And the boom for a helix has to be non-conducting

Not so when you're talking about 2 meters. They used to say the same
for quads and I've seen 3 quads that prove that old XYL's tale wrong. One
of them is 12 element at 17.5' long and the other 2 are 9 element and 10'
long and not only do they have a flat match but their beamwidth is as sharp
as a tack and their gain is better than their PVC prototypes.

I don't remember asking for criticism. I remember asking for a computer designed plan. Translate that as this: The only things I was asking for was the exact spacing, overall wire legnth, helix diameter and reflector demensions, nothing more.

> Well I can see some advantages to a helix over yagis, and I'm
> considering one myself for 2m, but I don't see why you don't want them

You mean to say that you critiqued my idea when don't even HAVE a 2m helical much less built one?

No thanks, I'll wait for someone who can offer exact formulas or mesurements, rather than speculations. My time is valuable and my money is sparse. This is not a game to me so I can't just wing it.

102. FS: TAPR/AMSAT DSP-93 TNC Assembled

I have a TAPR/AMSAT DSP-93 kit for sale. Unit has been professionally
built, checked out and works just super. Have orignal box, paperwork,
manuals, cables, etc. Does all current HF and VHF/UHF digital modes.
Modems are changed and updated via software so the unit never becomes
"dated".
TAPR's kit price on this unit is $430, I am asking $450 for
mine assembled! Compare this unit the the AEA DSP2232 which retails over
$1100.
You may contact me via email at kg2ic@amsat.org or call 716/625-8800 or
716/689-6727.

Hi all,

Well when I read the original post asking for help, the tone of the wording and absolute strangness made me think that it might have been a troll. Something gave me the impression that this ask for help was more than just that. Now it turns out that my sixth sense proved correct and this person really seems to not want help or advice, but is more interested in a flame war, or is simply a jerk. I'm not sure. It is really sad that this person chose to be confrontational when someone else was honestly trying to help.

But I'll give it one more shot, since others may learn something about helicals and I think that is a good thing.

In all the many texts, cookbooks, etc. treating helicals that I have seen in my research of helicals including Kraus I have never seen any mention of log *spacing*. Some have mentioned stepped or tapered changes in diameter of the coil, but none have talked about variable spacing. In fact, if the spacing, which is defined by the pitch is changed much out of the limits of 13 - 17 degrees then the helix will start to change from the axial mode to the normal mode meaning this is no longer the antenna that is desired.

>
> > The helix is a spiral
>

> Duh.

You seem to be a fantastically tempered person, how nice. It is always
so refreshing to be treated so well from someone that is asking for
help when that help is returned.

Throwing out cliches does not make it true nor does it serve any
usefulness.

>
> > Also thirty turns for the 2m band is going to give you one ENORMOUS
> > antenna. Probably something on the order of 50 to 60 feet.
>
> The length for MONO-filar would be about half that,(30 to 40 feet maximum).

This is the second time that you have seemed to make a big point about
monofilar, big deal. This is by far the more common design compared to
bifilar and quadrifilar.

Anyways, for an axial mode helix the parameters of the "coil" follow:
.9 < C (Circumference) < 1.3 wavelengths
13 < p (pitch) < 17 degrees

Typical values are 1 wavelength for C and 14 degrees for p.

Otherwise it degenerates to a normal mode helical or dipole like
antenna.

The value of S which is the lineal length of on turn is found by:

S = C * tan(p)

Taking C = 1 lamda at 144 MHz = 6.83 ft * tan(14) = 1.70 ft = S

Now for 30 turns 30 * 1.7 = 51 ft plus you add some more for the
feedpoint and matching area.

>
> > Nice gain it would have though, around 20.5 dB.
>
> I expect 25-30 bB.

I do not believe this is possible. Nor do any of the other people I
contacted on this issue.

> As I said above... 40 feet max... Plus I did mention the use of guy ropes.

The premise of 40 ft is questionable based on the "log spacing" but
even then, 40 ft is a long boom. Your right about the guy ropes, it is
not a pure cantelever, but even with support at both ends, it will
deflect in the middle area.

>

A quad is not a helix. A quad is not a treveling wave antenna and a
helix is. The helix relies on supporting an E field on the inside of
the coil. The quad does not. This may have some relevance, but if it
does then it is small and circunstancial.

I was not criticising you as you seem to be taking it so personally. I
was questioning the ability to realistically achieve your design goals.
If soemone asked you for plans per spec for something that is in your
area of expertise and it was apparant that they would have a difficult
time making it would you not state it so? Or would you simply answer
the question and let them try to deal with the unrealistic situation.

It's kinda like the new ham that was asking me to help him with an 80
meter antanna. He lives in an apartment. He mention that he had heared
that a quad was a good design, and wanted soem help with that. By your
demeanor I should have simply told hime the design formulas and left it
at that. But he was much more thankful that I explained that a 20m on a

side square plus a long boom would not quite fit in on on his apartment.

Yes I have critiqued your design spec. But no you are wrong with teh rest of your statement. No I do not currently have a 2m helix. My housing situation precludes that. I did use to have one at a differnt location used for satellite weather sat. I have built a few for/with friends for 2m. I have built and experimented with dozens of others for bands other than 2m. I have also studied them for classwork back in school a few years ago, and written dissertaions on them. I am no stranger to teh design and performance of the helix.

I said I could do that. And my advice is not speculation, it is experience from a good deal of experimentation.

> My time is valuable and my money
> is sparse. This is not a game to me so I can't just wing it.

Well my time is also valuable, probably more so since my money is not sparse. With the free advice I have supplied to you costing roughly $350 dollars time equivalent if I were to charge... I'm very glad that you are so gracious with my advice that was sent with good intentions to help out a fellow ham (or radio-nut since I can't find your name in the callsign lists for certain).

But that is the treatment I should have expected from someone connecting to a Monterey Park ISP. From down in the Los Angeles cesspool. I just love that the cretins from LA are there and not where I am.

Soemone mentioned that we might just have ALTAVOZ back, and it sure does seem so. When he was back on with the worldnet.att ISP he would connect to either an LA area pop or a SF bay area pop. Always posting many messages from the same pop per login. I couldn't find out his pattern before his account was yanked. Now this winner is from LA too and pretty much has the same attitude and temperment as ALTAVOZ. Maybe I can hope his account gets yanked also.

For the others that have posted concerning Teddy's attitude, thank you.

Jim

On Fri, 10 Jan 1997, John M Dashner provoked me by saying:

> The conotation of "Teddy Bear" to me suggests a fat ass sitting back who is
> either:

Hey... Go screw yourself, butthole. You are NOBODY... as in Nobody to talk and as in Nobody to me. If you think the purpose of this newsgroup is to dessimate criticism, you must be one of those lame fidonet rejects like Ken Freeland, accustomed to flames and retarded in brains. Since you have such a love affair with criticism, how's that suit you? And I'll bet my assessment of you is accurate too.

This newsgroup is NOT for flaming so go back to Fight-o-Net and leave us alone to discuss HAM RADIO, dumbass! NOTHING I SAID TO JIM DESERVED WHAT YOU SAID TO ME! But you, by blasting me without sufficient cause, deserve every bit of what I am saying here now.

> 1. wanting to have a little perverse fun at other's expense; or
> 2. someone who truly needs help but not the kind you have asked for.

ACTUALLY you are doing exactly what you accuse me of on both, counts 1 & 2!

Only a clueless half-assed moron who speaks without knowing the entire story would see it the way you did. If you thought Jim was right for replying to me with what I TOLD him I did NOT want to hear, then you are indeed a moron for speaking up before you read my FIRST post which was a mere 24 hours ago or less so you can't use the excuse that the post was already deleted, since it wasn't! You deliberately flamed-on without threading back to see that Jim WAS INDEED bringing it upon himself!

He WAS warned, and chose to ignore the warning, so it is HIS OWN FAULT that I replied negatively, you clueless idiot. When I tell someone not to bother me with something IT MEANS DON'T FRIGGING BOTHER ME WITH IT!

I hope your VE will one day regret taking the bribe that got you your license. You obviously don't have the attention span it takes to EARN one!

> I have seen people ask for help and submit their own ideas worked up to the
> point of exhausting their knowledge,

Oh you're breaking my heart!

> but the crap you submitted is what led me to the conclusions stated above.

Your post was absolutely out of line and off base. Everything I said in this reply was provoked by YOU. If you want to hold Jims hand and kiss his butt, go ahead and do so IN HIS EMAIL, NOT MINE!

No further email messages from you are welcome here and WILL be reported to your ISP admin as net abuse. THAT IS A PROMISE! I am sure that they, like most ISP's have a company policy against harrassment eminating from their customers. Learn to PAY ATTENTION TO A WHOLE THREAD before you go shooting your mouth off or keep your stupid mouth shut, twit!

You obviously have an attitude ploblem "teddy bear". Someone here is trying
to help you and at
the same time you are treating him like an idiot. How can you expect
anybody to help you when
you treat people the way you do? If you don't like the help that you are
being offered for free then
hire an engineer and pay him consulting fees. I am sure that he will put up
with your shit if you
pay him enough. By the way, if you are expecting 25-30bB's of gain you are
just dreaming.

Or do your bB's = MFJ dB's?
73's

Since you are addressing this to me more politely than John did, I will
reply more politely to you...

DID I NOT WARN EVERYONE IN MY INITIAL MESSAGE, THAT I DID NOT WANT
CRITICISM, SIR?

> How can you expect anybody to help you when you treat people the way
> you do?

Help MUST be the information that was ASKED FOR in order to qualify AS help.
Since it was CLEARLY what I had said in advance that I DON'T want, then
it is not help.

If you are visiting someone working on something and they ask you to pass
them a screwdriver and instead you pass them a hammer then you are
annoying them, not helping them, RIGHT?

> If you don't like the help that you are being offered for free then
> hire an engineer and pay him consulting fees. I am sure that he will put up
> with your **** if you pay him enough.

With that language, young man, you just threw all politeness right out the
window. If you can't discuss it without cussing me out, get lost. This is

not email, it's a public forum and kids DO read the posts here.

> By the way, if you are expecting 25-30 bB's of gain you are
> just dreaming.

WHO ASKED YOU? DID I ASK FOR OPINIONS? NO! I WAS SPECIFIC IN WHAT I ASKED FOR AND IN WHAT I DID NOT WANT TO HEAR! ALL I ASKED FOR WERE DESIGN SPECS! IS THAT CLEAR???

> Or do your bB's = MFJ dB's?

Since you DID ask:

MFJ makes crap. They are hung up on using half-wave designs which usually ARE crap. When they figure out what a quad is they might have a clue, but until then much of what they make is overpriced trash.

> 73's

What's the purpose of that? Don't tell me "73" after you just cussed me out. 73 means best regards and you've displayed contempt, not best regards.

TO EVERYONE: KEEP YOUR CRITICISMS AND CONTEMPT TO YOURSELVES! I DON'T WANT IT AND I WON'T HAVE IT! I asked only for antenna design SPECS.

If you can't give someone what they asked for then don't annoy them by wasting their time and "bandspace" with unwanted opinions!

110. Facts vs Opinions

Newsgroup: rec.radio.amateur.space

I THOUGHT that these were newsgroups for radio science discussions, based upon factual information. But mostly all I see here are people's unsolicited opinions based upon conjecture.

That's what happens when code skills are emphasized, hailed and rewarded instead of engineering skills. That's also why hams of today would rather buy equipment from a store than built it.

Once upon a time iw was WE who invented everything elecronic! Now most of us have been reduced to clueless consumers, lead by the nose like dumb sheep... a sad legacy indeed to leave to future hams.

When someone asks for calculations, instead they get speculation. But I must warn that if you were to try to build things out of speculation, you'll soon have a pile of failed projects stacked taller than you are.

Amateur radio is a SCIENCE, not a realm of personal opinions! We are SUPPOSED TO BE following in the footsteps of SCIENTISTS, using FACTS!

I shouldn't even HAVE to tell you this! Half the hams I hear these days barely know how to even solder! WHAT the heck is happening to us? Who lowered the technical knowledge standards? Who said that they could? When did it become no longer required to demonstrate the ability to build and troubleshoot radio equipment? It's truely an embarrassment to amateur radio that this has happened! I honestly know of novices who understand electronics better than extras and extras who act like CB'ers!

And what were you offering for payment?

You show up presenting a list of requirements like an RFP and expecting
free help, and when someone looks at the requirements and says they might
not be totally realistic, you jump all over them. Well I've built several
helix antennas and read a bunch more on them and I agree with Jims
evaluation of your design conditions.

Phil:

If you need to make a real brute force dummy load, check out surplus outlets for Carborundum Corp silicon carbide resistors. These resistors are often used as industrial heaters or in kilns. They often take the form of a rod or tube, typically 1/2" to 2" diameter and 6" to 24" long. All sorts of resistances. The terminations are a silver fired onto the ceramic body at each end. These babies are tough! And absolutely low inductance. I have used them as sense resistors in lightning pulse generators and as super RF loads. Immerse them in cooling oil, and dissipate away!
The big problem for you is impedance matching. It takes some imagination to configure one of these into a termination that properly matches the RF source. After all, the whole purpose of the dummy load is to transfer and absorb all of the RF, not reflect it. So, you not only have to consider the dissapative element, but the housing around it. Remember that the physical dissapator will act like an antenna if it's left out in the open "electrically". In the VHF range, you can't just hang a resistor on the end of the coax, it should be contained within an extension of the coax shield (otherwise the dummy won't be totally dumb) which doesn't create impedance discontinuities.

` Hi Waheeb...

My name is Carlos Alberto...
I'm amateur radio of Brazil...
I not write english very well, but lets go...
The packet radio is a mode of transmition an reception of
digitals signals..
Amateur radio is a class of people with make conversation from
radio equipment.
We have very others modes.. SSB, CW, RTTY, AMTOR, PACTOR,
GTOR, SSTV, SATELITE....
I hope help you...
See about amateur radio in ALTAVISTA SEARCH in ARRL
Bye Bye...

Hmm, someone who apparently is using a "handle" calling some of us CBers?
IMHO, based on total conjecture, is that since the code was de-emphasised,
we surely haven't gotten flooded with new engineers as we were promised by
the no-code lobby. But we sure have created a boon for the 2 meter rig
manufacturers as many of the 11 meter gang has moved up to the "major
league".

Maybe I expected too much of people's ability to give me only what I asked for or to leave the answering to those who CAN.

If my high standards for engaging in scientific discussions seem to be too much for some people who access these newsgroups to handle, I can only apologize for not realizing that. However, I will not apologize for having such high standards for engaging in scientific discussions. The latter is not a sin.

Perhaps I just tend to sometimes forget that ham radio is just a hobby to some people and that said people think that the phrase "just a hobby" is synonymous with the phrase "just a game".

Ham radio cost a lot of money as you all know. I am not a rich man. Therefore I take it much more seriously than most, because I take my money much more seriously than John Q. Deep-Pockets might.

To me ham radio is NOT a game. It is an educational laboratory in which we are supposed to hone our skills as elecronic engineers or something like that. I find that not many people look at it that way. To many, ham radio is just a more respectable version of a citizens band, and these kind of people are everywhere from novice class to extra class in similar percentages from class to class. I find that frustrating sometimes, DEPENDING of the forum. "When in Rome..." you know. Well in THIS forum, the names of these three newsgroups lead me to believe I would be talking to people who are as technically serious as I am. Now I see I may have read too much into the whole thing and thus formed unreal expectations of some of you.

Let me try to make it easier to avoid conflicts in the future:

If you take ham radio and electronics VERY seriously, as I do, then I welcome you to share your studies and knowledge with me, and if you ask, I'll try to do likewise.

But if you are a "weekend warrior" who enjoys a good ragchew discussion, but ham radio is just a high tech game to you, sorry, but I do not come to technical newsgroups for that so ignore my posts because I am not going to be like a friendly puppy and go play frisbee with you in here. I find that annoying and it provokes me into being cold and if you tell me off for being cold then I am going to be very mean and nasty. Thats just the way that I tick, so don't say I didn't warn you.

However, in NON-technical newsgroups I can easily be just one of the guys and be able to kid around and have fun like anyone else, but "I don't mix my peas in my spuds" as they say. I am technical in technical newsgroups

and I am human in non-technical newsgroups and never the twain shall meet. So don't try to make me be like you, running and hopping and skipping without regard to whether I am in a lab or on a playground.

Business is business, pleasure is pleasure and science is science to me and you might like to mix them but I can't and I won't and you will piss me off if you try to force me to be like that. I am the same on the air. In a technical QSO I don't want to hear about what your favorite movie is or what good gumbo your wife can make and in a SOCIAL QSO I don't want to hear about which resistor you put on the emitter of which transistor.

This is not a social newsgroup, it is a technical newsgroup. If it were a social newsgroup I would be in an entirely different mindset. If you don't like the mindset of "Just the FACTS" then PLEASE... leave me alone and I will return the favor! Is that too much to ask? It seems fair to me!

You are very INCORRECT! LEO Satellites want spectrum in the 130-170
and 440 to 455 MHz range for data-only services. The cost of end-user
equipment is far less than in the GHz range. And the Little LEO's are
not the only entities that want ham bands.

It is purely a matter of economics. 2 meters and 70cm are woth tens of
billions of dollars in corporate profits to any industry that can grab
the bands from hams. We are at war for our survival!

Right. It's the frequency wholesalers who want 'em. There's a chance
they might make a buck or two on resale, so it's worth the gamble. But
it's difficult to see how someone with that as their sole demonstrable
need for the spectrum, could make a persuasive enough argument to the FCC
to displace the amateurs from their most active bands. I'll grant that
just about anything's possible in government, but that by itself doesn't
mean it's necessarily likely to happen.

>It is purely a matter of economics. 2 meters and 70cm are woth tens of

Yes. But if the corporations did take over the bands, then the
Technicians wouldn't be able to fulfill your prognostication that they
would live out their entire amatuer careers on a single two meter
repeater, and you would finally have to admit being wrong about that. :-(

Jim,

I for one would like to thank you for taking the time and trouble to make this information available for the rest of us. I am a fairly new ham (1 1/2 yrs) and find the quest for knowledge one of the most rewarding aspects of the hobby. Your explanation of helical antennas has been printed out and will be saved for this spring when I hope to construct several helicals for satelite work. Not all of us are unappreciative of the efforts of others to help us increase our knowledge of this facinating hobby.

As for Teddy Bare, his attitude and outlook are most offensive to me. His kind makes it harder for those of us who are trying to learn and have found this and other ham related newsgroups a valuable asset in achieving that goal. I hope his kind won't keep those with the knowledge to help the rest of us from doing it.

Thanks again Jim.

Observers in CANADA and the NORTHERN UNITED STATES will have
excellent sighting conditions for Atlantis and Mir during the
STS-81 mission. In some locations (e.g. Vancouver or Calgary)
there will be a visible overhead pass every morning during the
entire mission. For times and circumstances of the passes
check the SatPasses Web Page at:

http://ssl.berkeley.edu/isi_www/satpasses.html

Happy observing!

I'm trying not to get in the middle of the flame wars here, but I was
wondering what the difference between monofilar, bifilar and quadrifilar is?
Mono is one and bi is two ect... How does this relate to a helical antenna?

>DID I NOT WARN EVERYONE IN MY INITIAL MESSAGE, THAT I DID NOT WANT
>CRITICISM, SIR?

oh yea, I must have missed that with everyone else. I read your original post. I did not see any warning to the following:

WARNING: Anybody who does not give me exactly the answers that I asked for will be flamed!

>> If you don't like the help that you are being offered for free then
>> hire an engineer and pay him consulting fees. I am sure that he will put up
>> with your **** if you pay him enough.

Not likely....I'd tell him to fuck off and find himself another engineer.

>With that language, young man, you just threw all politeness right out the
>window. If you can't discuss it without cussing me out, get lost. This is
>not email, it's a public forum and kids DO read the posts here.

Yea, there are a LOT of kids who like to read Helical design for EME.

>
>> By the way, if you are expecting 25-30 bB's of gain you are

: IMHO, based on total conjecture, is that since the code was de-emphasised,
: we surely haven't gotten flooded with new engineers as we were promised by
: the no-code lobby. But we sure have created a boon for the 2 meter rig
: manufacturers as many of the 11 meter gang has moved up to the "major
: league".

What, and you think that being able to do code makes you an engineer?
I don't think so! Only about 1/10 of our club actually knows code
and over 3/4 of us are engineers. If you actually think that code
is a prerequisite to be an engineer, you should go back to school! CW is
only briefly mentioned in communications classes today.

And as for "Teddy Bear", there are quite a few of us that actually build
stuff yet.

The frequency pair 145.200/145.800 was previously used in IARU Region
1 (Europe and Africa) as repeater channel R8. The use was
discontinued, since it caused interference to the satellite band. The
repeaters on that channel were moved elsewhere. The frequency 145.200
was changed to ordinary simplex S8.

The usage was once more changed. From IARU Region 1 conference
recommendations:

>The following recommendations were adopted at the meeting of the VHF /
>UHF / Microwaves Committee in Vienna, 1995, and have been adopted by the
>Executive Committee of IARU Region 1 at their meeting in April 1995 as

> shall be used for simplex NBFM telephony by manned space stations over

> Region 1. For split frequency operation the frequency pair
> (145.200/145.800) can be used.

So, this is originally a Region 1 recommendation and the Mir crew seems to use the same frequency over all regions. The old Mir frequency 145.550 was the most frequently used simplex frequency (after the calling frequency 145.500) causing a lot of mutual interference.

Hi Mr. Teddy bear,

I know this is not the design that you requested, but here it goes.

Due to your "dream like" gain figures for this antenna, I recommend a supercooled, superconducting bifilar helical antenna. By using superconductive wires, you should be able to make the resistive losses of the antenna equal to zero. This should greatly increase the performance of the antenna.

... or you could use a yagi array. Let's use simple math to calculate the number of antennas required to achieve 30 dB of gain. For this example we will use a cushcraft antenna (13B2) with an approximate gain of 14dB. If you were to connect n of these antennas together, the gain would increase to 14 + 10 Log (n). If we assume that for every antenna there is a loss of .25 dB in feedline and splitter losses, the above formula becomes 13.75 + 10Log(n) = 30dB. Solving the equation for n gives us :

n=10^1.625
How many antennas do you need?
42.17 antennas
Since antennas come in whole units, I recommend you use 42 cushcraft antennas and 1 MFJ antenna. This should approximate the requirements. Care should be taken as to not skew the antenna pattern. I recommend placing the MFJ antenna dead center of the array. Actual results may vary if you use Radio Shack CB cable.

On a last note,
If you decide to go with the supercooled, superconducting bifilar helical antenna, I recomment that you build two of these antennas with opposite polarization. This will enable you to hear your own echos. See you on EME!

73's

P.S. You owe me $300 in design fees... Puto!

Oh I see Teddy, now I'm curious about this connection between rewarding CW skills and unsolicited opinions and conjecture. Do you have some research showing this connection or is this just YOUR UNSOLICITED OPINION?

Additionally I'd love to see what FACTUAL INFORMATION you have showing why hams build or buy. According to you, they buy because we have emphasized CW instead of engineering. For the record I have no formal education and my entire ham shack is either kit or homebrew. Was this just YOUR UNSOLICITED OPINION?

> Amateur radio is a SCIENCE, not a realm of personal opinions! We are
> SUPPOSED TO BE following in the footsteps of SCIENTISTS, using FACTS!

It's not defined as a science by the FCC, they are the folks who issue licences.
They call it a SERVICE.

Teddy, the hobby or "science" as you prefer has changed. Sorry! And again thanks for sharing your PERSONAL UNSOLICITED OPINIONS on why hams buy instead of build and why emphasis on CW has caused unsolited opinions based on conjecture. Very interesting observation.

Sheeesh, go design a tranciever or something. I need a new winter project.

Oooh, more FACTUAL information from Teddy. I'm getting ready to build a 4 watt 30m tranciever from the NorCal radio club. It cost me $25 + $3.50 S/H, yep that sure is alot of moola Teddy. Of course my 40m DC reciever I built cost me almost $30 so, yea, I guess thats getting up there.

> This is not a social newsgroup, it is a technical newsgroup. If it were a
> social newsgroup I would be in an entirely different mindset.

By the way Teddy who are YOU to make the descision that this is not a social newsgroup? First, you've posted this to several groups so I'm not sure which one your talking about but you'll notice they all begin with REC. (recreation, get it?)

Your problem is your wound just a little too tight regarding this "technical discussion" thing. Unfortunatly your going to cheat yourself out of learning something new because the teacher at the other end may not take this as seriously as you do. There are alot of very smart people who hang out here, but along with the technical discussion there is alot of ribbing too. Lighten up a bit Teddy, it gets easier as you go along.

WHAT makes me a damn begger? I have info to give on other topics pal!
Fair exchange is not robbery as the old saying goes. So get off your high
horse because you do not have a corner on knowledge and even though I dont
know it all, I certainly am not knowledgabley bankrupt!

And AGAIN if I ask for a screwdriver and you give me a hammer then your
idea of "help" is not help at all!

What is so hard to understand about that? IT HAPPENS TO BE TRUE!

Uh, actually no Teddy you did not. Are you forgetting what your original post said?
Where exactly is the warning? Your starting to drift on us Teddy...

I bet your the kind of guy someone could give a million dollars to and you'd bitch cause you had to pay the taxes on it!!

Can ANYONE here give me a computer-designed plan to make a beam antenna that
fits the following "rough-draft" parameters?

A 30 turn, logarythimic-spaced, Right-Hand Circularly-Polarized (RHCP) beam
antenna for 144.3 MHz, on a manually-swiveling rear-mount boom,(made of 2" OD Aluminum tubing), with a mono-filar element,(made of bare #6 solid copper wire, commonly used by electricians as ground wire for a building's
main box), with insulating "spreaders",(made of either 1/2" PVC, fiberglass
rods or wood dowels).

My idea is to mount the boom vertically on a universal joint, which itself is mounted atop a 10' mast,(5' of the mast actually being below ground level in concrete), and to use pullies and counter-weights with the
non-conductive guy ropes to actually TILT the antenna at the moon,(using a boom-mounted 3X rifle scope to aim it), so by turning 2 lockable cranks
I can track the movement of the moon manually anywhere in it's path anywhere within 60 degrees from plumb,(by "plumb" I mean an exactly vertical position). The mechanics of it are much the same as those of the
older mobile cranes they used to use on rural construction sites.

BTW: I am not open to the idea of using a yagi, so please don't suggest it.

Please reply via both, the newsgroup and email.

Thank you.

Bill;

Tens of billions of dollars??! And what fine piece of analysis work do you base this claim on? This is pure hysterics, IMHO, just more Chicken Little-like "Sky is Falling" crap with no supporting evidence to back it up.

Are there people and organizations out there that would like to grab up our spectrum for their own use? You bet there are. But if it were really worth "tens of billions of dollars" we'd have lost that fight long, long ago.

Our tiny chunk of spectrum at 2m and 70cm is barely usable by modern data communications standards. Any organization that can afford to get its own LEO bird on-orbit can easily afford SHF gear to communicate with it much more reliably than with VHF/UHF links. I think our claims to bandwidth at 2 GHz and above are far more at risk from these sorts of operators.

SATELLITE LISTENING POST BULLETIN - Saturday - 1/11/97

CURRENT STATUS - 0037Z (7:37 p.m. eastern time)

Perform inertial measurement unit preflight calibration. Align Merritt Island Launch Area (MILA) tracking antennas. Perform open loop test with Eastern Test Range. Conduct gimbal profile checks of orbital maneuvering system engines.

Name: STS-81
Launch Agency: NASA
Launch Site: Kennedy Space Center, FL, Pad 39B
Launch Azimuth: 42.88 degrees
Launch Time: Sunday, 12 Jan 97, 0927Z
Launch Vehicle: Space Shuttle Atlantis

The 200 nautical mile circular orbit will be included 51.65 degrees from the equator using the direct ascent technique. This will carry the external tank's impact near -0.3 N. Latitude and -125.5 deg E.

Space Shuttle Downlink Frequency List

VHF-band 139.208 MHz Shuttle/Mir Docking Operations
UHF-band 240.0 or 242.0 Mhz SRB
UHF-band 243.000 Mhz AM (Emergency Voice Channel)
UHF-band 259.700 Mhz AM (Primary Voice Channel)
UHF-band 279.000 Mhz AM (EVA Voice Channel)
UHF-band 296.800 Mhz AM (Backup Voice Channel)
S-band 2217.500 Mhz (Data)
S-band 2250.000 Mhz (Data)
S-band 2287.500 Mhz (Data)
C-band 5400-5900 Mhz (Data)

This may not be entirely true. The ever modest Wayne Green in a 73
article many years ago reported on an interview with Gen. Curtis LeMay

the following: Le May is reported to have said (with many expletives deleted) that (the military) want the hams to keep their bands because in time of conflict we (the military) can quickly take back the ham bands, but the commercial people will fight tooth and nail to keep their frequencies. ...So you see, we may have more friends in power than the commercial interests. Perhaps we need to remind the military of this from time to time and keep them on our side. If you know military hams, advise them of this point if you think it is correct. Sgd. Neil AB4YK.

Hello and good morning,
My Name is Nicolau,ARS PP8DA,FI96XX.
-I interested to know how to set up a well worcking,but not to sofisticated(and expensive)packed station to work on 9600 Bps Pacsat.
-My present set up is:
Kenwood TS-790A (to be modified for 9600Bps)
Amplifier 2m,B2516G Mirage;70cm Rfc 4-310 Rfconcept
Preamp.Toky Hy-power mod HRA/2 20 dB gain
Antennas Crushcraft AOP-10;Yaesu G-5600B Rot.controller
Cable Belden 9913
Sattelite tracking softer Nova V1.1b (DOS)
Sasi-Y ant.positioning device and doppler control in above softer.
Modem only the conventional 300/1200bps for my F6FBB bbs sys.(Kantronics Kam Plus)
-I`m thinging about buying a AEA PK-96 for Pacsat,your opinions and recommendations please
-Further,will the Nova V1.1b do the job,and what kind of decoding program you suggest for ease of work and reliability.
-I hope I have put the questions clearly and thank you in advance for any reply.

Yes, this is correct, except that the Mir repeater went off the air a few
weeks ago and hasn't been on since. And nobody knows why.

AO-21 was shut off a few years ago. During the changeover from Socialism to
Democracy, Russia had to make many budget-cutting decisions, and the main
satellite that AO-21 was attached to was shut down as a result. There is no
chance of turning it back on, since much of the controls have been damaged by
temperature extremes it endured while it was shut off. Too bad. that was a
nice satellite.

Re: AO-21
The Russians (who own the space frame) turned off the bird several years ago. The amateur repeater failed soon after. I have heard opiions that it is terminal and others that it could be brought back up but for now it is gone.

It is a sympathetic situation. But there are many solutions. AMSAT
was instrumental in picking the APRS frequency. They are of course
interested in MIR contact. There is much desire on all sides to
resolve. Some ideas:

1) listen for MIR on 805 on the rise. You'll hear a lot less of APRS,
and catch MIR fine on the doppler shift. Of course, you need to
tune down to 800 during the pass, and those that lose the last third
of the pass will still have that problem.

2) Mir could send a signal to the APRS net that will quiet APRS for 8
minutes. The APRSDos already has the code in it to handle this.
the APRSSIG has had some discussion.

Everyone is interested in working this out. It's a shame that it's
so good for the Europeans, as that makes a change for MIR real tough
to sell.

The "common wisdom" in the commercial world is that spectrum is worth
about 1 billion per megahertz as a capital asset. That may be optimistic
in some cases, but lets work some numbers. A commercial two-way channel
can bring in rental income in excess of $1000 a month, or $12,000 a year.
50 such channels can be fitted in a megahertz using today's NBFM technology.
So a megahertz brings in about $600,000 a year. Prorated over a 20 year
capital asset cycle, that's $12,000,000 for one local coverage area of
about 314 square miles. If we take that to represent one US MSA (Metropolitan
Statistical Area), then the top 100 MSAs in the US would bring in over
$1.2 billion over the prorated life of the asset. So a company which could
control 1 megahertz of spectrum nationwide would consider it a billion
dollar asset. Multiply that by the 34 MHz amateurs have at 2m and 70cm,
and you're looking at an asset worth $35.2 billion to a company which
controlled it.

Of course some uses could bring in much more per megahertz than the
two way industry does. For example, cellular phone reuses the frequencies
much more intensely. And other methods, such as SS, can also get substantially
more use out of a megahertz than plain old NBFM. Even paging services use
their spectrum more intensely, so this is likely a lower bound to the
value of a megahertz of spectrum.

> Are there people and organizations out there that would like to grab
>up our spectrum for their own use? You bet there are. But if it were
>really worth "tens of billions of dollars" we'd have lost that fight
>long, long ago.

No, because long long ago there wasn't enough *demand* for wireless
services to consume all the available spectrum. Today there is.
Advances in technology, and our increasingly mobile society, have
caused an explosion of demand for wireless services that didn't
even exist 20, or even 10, years ago. Vehicle tracking systems,
both for shippers and for consumers, IE LowJack, didn't exist
20 years ago. Today they are big business, and getting bigger.
Wireless meter reading didn't exist 20 years ago, today it is
big business, and growing. There appears to be an ever expanding
desire for paging services, including nationwide paging, today.
20 years ago only doctors and plumbers wanted pagers. And of
course there is the wireless internet. The internet itself didn't
exist 20 years ago. Today we have services like Ricochet delivering
the net to our laptops. All of these uses, and many more, want more
spectrum to service their growing customer bases.

> Our tiny chunk of spectrum at 2m and 70cm is barely usable by modern
>data communications standards. Any organization that can afford to
>get its own LEO bird on-orbit can easily afford SHF gear to
>communicate with it much more reliably than with VHF/UHF links. I
>think our claims to bandwidth at 2 GHz and above are far more at risk
>from these sorts of operators.

There will be pressures above 2 GHz, but for vehicle tracking from
orbit, nationwide paging services, and low rate data services such
as meter reading and Email delivery, our 2m and 70cm spectrum is
nearly ideal. That's because the cost of customer equipment is low,
so many many customers will sign up, and because directional antennas
at the customer location are not needed, IE ideal for mobile users.
High rate and bulk data delivery, such as DSS and other point to point
services, and point-multipoint broadcast services, will likely be above
2 GHz, but there are plenty of low rate uses which are also lucrative
and ideally suited for our spectrum.

Teledesic is not a threat to our VHF spectrum. They have their own
microwave spectrum already assigned for their high rate service. If
they grow as much as they hope, however, they may pose a threat to
our above 2 GHz spectrum in years to come. The immediate threat to our
2m and 70cm spectrum comes from outfits like Orbcomm who are already
using VHF for low rate LEO supplied services, and who need more spectrum
to expand those services.

Note, the little LEOs are not without competition in wide area low
rate data services. Globe Wireless is installing a global network
for vehicle tracking and Email delivery *on HF*. This service is
cost competitive because it doesn't require costly satellites or
costly satellite launches. It probably has less potential for growth
than the little LEOs, but then there is less HF spectrum to grow

in as well. So we may see pressure on HF resources in the future from operations like this which have to have lots of frequencies so they can follow the MUF. And then there is the spectre of compatible digital AM which may be an attractive alternative for SW broadcasters instead of moving to satellite DAB. That too could put more pressure on HF frequencies in the future.

None of our spectrum should be assumed to be safe. There are companies out there with viable business plans looking at all of it. Improvements in technology have made this possible, and growth in demand for wireless services has made it potentially very profitable.

FCC Commissioner Ness has said that the FCC will no longer tolerate spectrum warehousing, and Congress passed a law requiring the FCC to give preference to new technologies and new uses of spectrum. We are entering a time of great changes, and every Hertz of spectrum we now hold will come under scrutiny to see if we are putting it to its best use. If we aren't, the FCC is mandated to assign it to those who will.

>The big problem for you is impedance matching

The good news is that for monoband use, impedance matching is not a problem. Provided that the impedance is anywhere near reasonable, you can design a fixed stub tuner in coax cable to match the load to 50 ohms within a single VHF/UHF amateur band. It doesn't even have to be a 50 ohm resistor - which might also bring the price down.

I use a commercial 50 ohm 1kW HF dummy load. On its own, it's OK up to 30MHz, or 50MHz at a push, but it's poor at 144MHz and hopeless at 432. With add-on matching networks it's fine on 144 and 432 as well.

Before you can start to design the matching networks, you do need an accurate impedance measurement (resistance and reactance separately) on each VHF/UHF band. A friend with access to a vector network analyser can usually oblige. Once you know the impedance to be matched, it's a classic Smith-chart problem to determine the lenths of the series and parallel coaxial stubs. If you're patient and really know your way around a Smith chart, you could probably do the whole thing by cut-and-try in RG-58, before stepping up to larger coax such as LDF2 and LDF4.

Apart from extra PK screws in the box to avoid RF leakage at the hoigher frequencies, the only major modifications to the existing dummy load were to make conical transitions out of copper foil to contact the whole silvered band around each end of the resistor. These are not for impedance matching, but to avoid hot-spots. Hot-spots are the main limitation on power dissipation at VHF and above, which is not surprising because the resistor is a significant fraction of a wavelength long.

Best to obtain a copy of the the "Mode S Handbook" by Ed Krome from AMSAT.
There is some practical info there.., Cliff K7RR

Hello,

I am interested in buying an AR3000A PLUS (the modified AR3000A which
includes a switch for wefax reception). Please let me know if you have one
of these and would like to sell it.

Thank you,

Jim

John Blaha confirmed the repeater has been down. Didn't hear why and he said he wasn't sure what's up. You have the freq. correct.

178. NORAD Two-Line Orbital Element Sets (TLE929)

Newsgroup: rec.radio.amateur.space
Date: 1997-01-13 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <5befaq$gjl@blackbird.afit.af.mil>
Source record: 20282

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

179. NORAD Two-Line Orbital Element Set: Space Shuttle (97012.64976432)

Newsgroup: rec.radio.amateur.space
Date: 1997-01-13 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <5bef04$gj4@blackbird.afit.af.mil>
Source record: 20283

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system. As a service to the satellite user community, the most current elements for the current shuttle mission are provided below.

Element sets (also updated daily), shuttle elements, and some documentation and software are also available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

180. FS: SASI Satracker

Newsgroup: rec.radio.amateur.space
Date: 1997-01-13 00:00:00 UTC
From: "Bruce J. Howes KG2IC" <kg2ic@amsat.org>
Message-ID: <32DA2FCB.3511@amsat.org>
Source record: 20284

I have for sale a SASI Satracker Rotor controller.

Unit is designed for satellite use, but could also be used for terrestial work.

Controls both EL and AZ with the Yaesu GB5400, Kenpro 5400 series rotors, maybe others.

Comes with tracking software, manuals, connecting cables and all paperwork.

Unit works great with major satellite tracking programs.

Uses parallel port so serial ports are left free! Great for laptop or field day use.

In perfect condition, both cosmetic and electrical.

Cost almost $300 new, I am asking $150 or best offer.

Respond to mail kg2ic@amsat.org or call (716) 689-6727 evenings.

73,

Bruce J. Howes KG2IC

181. MIR was talking

Newsgroup: rec.radio.amateur.space
Date: 1997-01-13 00:00:00 UTC
From: Erik Finskas <lakki@clinet.fi>
Message-ID: <5beg4a$g5q@news.clinet.fi>
Source record: 20285

This morning about 06 UTC MIR passed by and I copied the service frequency 143.625MHz with an average signal. The conversation was simplex, the transmitter was keyed an unkeyed, like to save battery (??) Previously as I have heard this service frequency, they latch the ptt as the transmission is full duplex. At the same time, MIR was operating packet on 145.800MHz.

So there is life onboard MIR...

The Shuttle mission commentators told that the shuttle crew are equipped with portable VHF radios to communicate air to air directly with the crew on MIR space station at the time of docking the shuttle to the MIR. Anyone have a clue of the frequencies? It could be a exotic signal to copy.

183. Stand Alone Rotor and Radio Control Hardware

Newsgroup: rec.radio.amateur.space
Date: 1997-01-13 00:00:00 UTC
From: mbv@ti.com
Message-ID: <5be3it$ips@tilde.csc.ti.com>
Source record: 20287

Can someone post a list of the tracking systems that
don't require the use of computer ports for operation?
I am not interested in a kit or in hardware that is no
longer being manufactured. There was some information
here about a year ago that I failed to save. The box should
be capable of running a 5400 rotor and FT736 radio.

Thanks, Ken Durham K5MBV mbv@flash.net and mbv@ti.com

> to expand those services.

The original context where I saw the threat to 2m/70cm actually
came from a Motorola ad for their "Iridium" system in Aviation Week
about 3-4 years back; the fine print noted that their LEO up/downlink
frequency plans included 146-148 MHz...at which point I nearly had
a stroke!

ObLightheartedness: Since Iridium has been redesigned to use
a constellation of 66 satellites rather than 77, shouldn't it be
renamed "Dysprosium?"

> None of our spectrum should be assumed to be safe. There are

> growth in demand for wireless services has made it potentially
> very profitable.

I think this is absolutely correct. If we can't demonstrate that
amateur radio is a service, not just a hobby, the new policies
regarding spectrum usage will likely flush us right down the
bowl.

> wa6lbu@aol.com

Hello Clay,

try 143.625 MHz and 145.800 MHz (+- doppler-shift).

It is meaningful to use a SatTrack-programm which shows, on
which time MIR is in range. The hearing-window is abround 10 min.

Ha det bra !

Rainer

I worked the packet station on Mir using the following........

Monitor 145.800 - offset

Which means listen on 145.800 and transmit on 145.200. This is the
packet plan now and also the voice.......

P.S. To see the QSL from Mir I got, check out my web page using this
just for the picture. www.ior.com/kd7aat/mirqsl.jpg or the one below

Actually, it doesn't seem to go away with 1997 keps, at least if you're using a KCT/T card...but the problem is well known and will be addressed very quickly as soon as Chris Jackson returns from New Zealand in the next few days.

193. Help with krep elements & Logsat software

From: tsarah@gwis.com
Message-ID: <5bh1th$muo@news.gwis.com>
Source record: 20297

Hi all, my first posting here and I hope you can help. I am using LogSat and have kept my Krep elements up to date. I have been trying to hear and/or contact MIR, but without any luck. I am wondering if I have things set up properly. I have used Akron Ohio as the closest city and a -5 in the time parameter, with day light savings off.

I have been listening on 145.55 and also on the 400mzh repeater frequency and haven't heard a thing when it is supposed to be overhead.

I understand from a satellite frequency listing obtainable from
husted@login.dknet.dk using ftp://login.dknet.dk/pub/husted/satellit.zip

that on the european Ku band satellite "SRDN" at 16 degrees west you can
pick up video feeds of MIR, can any one confirm this? Does anyone know of
the video standard they are using.

I have have enclosed an extract from the file.

16 West SRDN (Inclined Orbit)
A	VIDEO	PO	PROGRAM	VIDSTD	VT	COD	LANGUAG	AUDIO	TP#
T	10.821	RC	Feeds (space station MIR)				Russian	7.00	

Any further information on this feed would be most welcome.

I would also like to thank husted@login.dknet.dk for a very detailed listing.

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system. As a service to the satellite user community, the most current elements for the current shuttle mission are provided below.

Element sets (also updated daily), shuttle elements, and some documentation and software are also available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

Could you be more explicit? This is not enough info to try to fix your problem.

Anyway, the problem could be in the terminal program that you are using for. The ascii upload should be paced to 100ms per line. I'm running Telix on MS-DOS, and minicom for Linux, and none of them have problem to upload kepler and satellite info to the TrakBox.

Cheers,

I've been using SatTrak for years. It should run fine on an SE. You
can get it from:

http://www.primenet.com/~pflueg/
or
ftp.primenet.com/users/p/pflueg

For those who don't have Web or FTP access, send a note to Mike Pflueger
at pflueg@primenet.com and he'll be happy to tell you how to get the
program by mail.

Also, John Seney's list of Macintosh ham software includes several
other tracking programs:

http://www.mv.com/ipusers/wd1v/page5.html

I thought amateur radio was a hobby. You are supposed to have fun
doing something that you like. For some it is talking, for some like
you it is doing stuff like measuring the energey of the quantum band
gaps of hot carrier diodes over temperature :-)

>I shouldn't even HAVE to tell you this! Half the hams I hear these days

That is kind of hard to believe. The extra written exam is a cake walk,
but the advanced class is about the same as a commercial radiotelephone.
Those extras must have been one of those people that memorized every

question in the pool.

Are the SASI, the KCT, and the high dollar TAPR kit
the only ones out there now? ...Seems like there were
a couple of others. TheSASI is overpriced for a cable
plus software and uses the computer ports. The KCT is
not stand alone box.

Is there a stand alone rotor control and tune box being
built now? The AMSAT page is no help and searches don't
turn up anything but software.

Hello together,

I have question to the specialists:

1. while following the MIR-positions I found a big jump
from the 7th day in '97 to the 12th day. Around 5000 km.

Was it a maneuver for meeting the shuttle ?

2. Does someone know, why the Kepler-data of AO-10 are so old ?

In the last updates they were alway from 96299.11...

Thank you very much !

So long !

Rainer

I think that things are harder now. It was easy to glue together
vacuum tubes in the days you speak of. Solid state is harder, at
least harder to do right. My opinion.

>
>When someone asks for calculations, instead they get speculation. But I

I thought amateur radio was a hobby. You are supposed to have fun
doing something that you like. For some it is talking, for some like
you it is doing stuff like measuring the energey of the quantum band
gaps of hot carrier diodes over temperature :-)

>I shouldn't even HAVE to tell you this! Half the hams I hear these days
>barely know how to even solder! WHAT the heck is happening to us? Who

That is kind of hard to believe. The extra written exam is a cake walk,
but the advanced class is about the same as a commercial radiotelephone.
Those extras must have been one of those people that memorized every
question in the pool.

>SE30?

I've been using SatTrak for years. It should run fine on an SE. You
can get it from:

http://www.primenet.com/~pflueg/
or
ftp.primenet.com/users/p/pflueg

For those who don't have Web or FTP access, send a note to Mike Pflueger
at pflueg@primenet.com and he'll be happy to tell you how to get the
program by mail.

Also, John Seney's list of Macintosh ham software includes several
other tracking programs:

http://www.mv.com/ipusers/wd1v/page5.html

From: Erik Finskas <lakki@clinet.fi>
Subject: MIR was talking

This morning about 06 UTC MIR passed by and I copied the service frequency
143.625MHz with an average signal. The conversation was simplex, the
transmitter was keyed an unkeyed, like to save battery (??) Previously as
I have heard this service frequency, they latch the ptt as the
transmission is full duplex. At the same time, MIR was operating packet on
145.800MHz.

So there is life onboard MIR...

The Shuttle mission commentators told that the shuttle crew are equipped
with portable VHF radios to communicate air to air directly with the crew
on MIR space station at the time of docking the shuttle to the MIR. Anyone
have a clue of the frequencies? It could be a exotic signal to copy.

Subject: NORAD Two-Line Orbital Element Set: Space Shuttle (97012.64976432)

The most current orbital elements from the NORAD two-line element sets are
carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are
also available on this system. As a service to the satellite user community,
the most current elements for the current shuttle mission are provided below.

Element sets (also updated daily), shuttle elements, and some documentation
and software are also available via anonymous ftp from archive.afit.af.mil
(129.92.1.66) in the directory pub/space.

229. Rebellions in Space!!!

Newsgroup: rec.radio.amateur.space
Date: 1997-01-18 00:00:00 UTC
From: wmeara@erols.com
Message-ID: <32e0f768.84990176@news.erols.com>
Source record: 20183

I was watching The Learning Channel last night. They ran a program astronaut/ cosmonaut health. Norm Thagard was interviewed. At one point they mentioned an American Shuttle astronaut who - while on a space walk- was overwhelmed with the wonder of it all and essentially refused to come back inside. Had to be dragged back in by the tether! Did this really happen?

They also reported on a rebellion by a MIR crew. Disgusted with their ground controllers, they turned off their radios and wouldn't communicate for several weeks! Does anyone have info on this incident?

Thanks 73 N2CQR

I don't know but I know there was a mutiny in space. The Space Shuttle crew was working very hard every waking moment for a long time during the mission and mutinied for a while so they could relax, play and admire the galaxy. I herd that from a Shuttle astronaut during a TV interview.

231. Phase 3

Newsgroup: rec.radio.amateur.space
Date: 1997-01-18 00:00:00 UTC
From: Brian Baskett <B.Baskett@worldnet.att.net>
Message-ID: <01bc0550$89768620$968d93cf@default>
Source record: 20185

I am looking for inexpensive 432 equipment and antenna which will enable me
to get on the new phase 3 satelite.
Anyone have an old icom or kenwood or xverter???
tnx
73 Brian WA7PVE

232. Desperately need KC5PZQ's QSL ROUTE.

Newsgroup: rec.radio.amateur.space

233. A question on MIR

Newsgroup: rec.radio.amateur.space
Date: 1997-01-18 00:00:00 UTC
From: tsarah@gwis.com
Message-ID: <5br4en$6p5@news.gwis.com>
Source record: 20187

I want to thank everyone for helping with my LogSat proble, it's now working properly.

I was also told that MIR had shifted from 145.550 to 145.80/145.20. Now I want to be sure that I do this correctly, since packet and satellite communications are new to me. Please correct me if the following is incorrect (it's from the Feb '97 issue of CQ VHF):

MIR packet simplex on 145.80
MIR voice: MIR transmitts on 145.20
I transmit on 145.80

STS still operates on 145.55

These frequencies for MIR are a real problem here. There is a strong packet station already on 145.80. And, there is a VERY strong wide area repeater on 145.19 that really bleeds over on 145.20. Not nice.

Thanks in advance,

Ted
KC8ENM

I have version 9650. It is installed on a 200mhz pentium pro.
I can update the tle's jsut fine.
Do pass preditcs just fine.

However, If I goto a ORTHO or WORLD view map after about two mins it
locks up. I have to power off to regain controll.

Is there a fix or a win/win95 version.

I have tried winorbit but, I do not like the maps it has..

Thanks..

I think that things are harder now. It was easy to glue together
vacuum tubes in the days you speak of. Solid state is harder, at
least harder to do right. My opinion.

I thought amateur radio was a hobby. You are supposed to have fun
doing something that you like. For some it is talking, for some like
you it is doing stuff like measuring the energey of the quantum band
gaps of hot carrier diodes over temperature :-)

>I shouldn't even HAVE to tell you this! Half the hams I hear these days

That is kind of hard to believe. The extra written exam is a cake walk,
but the advanced class is about the same as a commercial radiotelephone.

Those extras must have been one of those people that memorized every question in the pool.

I've been using SatTrak for years. It should run fine on an SE. You can get it from:

http://www.primenet.com/~pflueg/
or
ftp.primenet.com/users/p/pflueg

For those who don't have Web or FTP access, send a note to Mike Pflueger at pflueg@primenet.com and he'll be happy to tell you how to get the program by mail.

Also, John Seney's list of Macintosh ham software includes several
other tracking programs:

http://www.mv.com/ipusers/wd1v/page5.html

From: Erik Finskas <lakki@clinet.fi>
Subject: MIR was talking

This morning about 06 UTC MIR passed by and I copied the service frequency
143.625MHz with an average signal. The conversation was simplex, the
transmitter was keyed an unkeyed, like to save battery (??) Previously as
I have heard this service frequency, they latch the ptt as the
transmission is full duplex. At the same time, MIR was operating packet on
145.800MHz.

So there is life onboard MIR...

The Shuttle mission commentators told that the shuttle crew are equipped
with portable VHF radios to communicate air to air directly with the crew
on MIR space station at the time of docking the shuttle to the MIR. Anyone
have a clue of the frequencies? It could be a exotic signal to copy.

From: relliott@cyberhighway.net
Subject: SAREX & MIR update request.

I have been out of the loop for a while. Could somebody let me know the current MIR and
SAREX
frequencies. Possibly an uptodate URL for current information. I have heard that MIR has
several new
updates as far as Amateur Radio goes.

Thanks,
Rich Elliott KC7CDK

Subject: SASI Sattracker

Are the SASI, the KCT, and the high dollar TAPR kit
the only ones out there now? ...Seems like there were
a couple of others. TheSASI is overpriced for a cable
plus software and uses the computer ports. The KCT is
not stand alone box.

Is there a stand alone rotor control and tune box being
built now? The AMSAT page is no help and searches don't
turn up anything but software.

Could you be more explicit? This is not enough info to try to fix your
problem.

Anyway, the problem could be in the terminal program that you are using
for. The ascii upload should be paced to 100ms per line. I'm running
Telix on MS-DOS, and minicom for Linux, and none of them have problem to
upload kepler and satellite info to the TrakBox.

Cheers,

Actually, it doesn't seem to go away with 1997 keps, at least if you're
using a KCT/T card...but the problem is well known and will be addressed
very quickly as soon as Chris Jackson returns from New Zealand in the
next few days.

OrbiTrack 2.1.5 works quite nicely... available in version needing an FPU,
or without FPU. Check the usual sites. It ran OK, but slow, on my old SE,
but on getting my SE/30 with FPU, boy did it make short work of a month's
worth of printouts. Real time track on a map, grayline map,
sunrise/sunset, satellite to satellite views... all the works.

> I transmit on 145.80

I don't know what the packet is anymore but the voice is:

145.200 uplink
145.800 downlink

and yes these are reversed from what they were. I also heard that the packet was now split the same.

Kevin, have a look in this URL, maybe it fits your need

Hello.
I've just updated my FTV program, which does FAX & SSTV using a
SoundCard,
to decode Baudot using the same (FM) demodulation engine.

Here is a run down of the more interesting features:

(1) It keeps the demodulated signal in memory, so that the signal can
be
analysed again at a different keying rate or polarity! Garbage can be
resampled on the fly, which means that minutes of received signals
decoded
at the wrong baud rate or keying polarity are recovered, on the fly,
while
still receiving.

(2) Keying rate and polarity are analysed automatically - standard
baud
rates are automatically set following analysis.

(3) Tuning oscilloscope available at all times, without loss of copy.

(4) Program works in real time.

(5) I wrote it, and I love it - I myself can't believe it works so
well!

Download your copy of FTV from my web site, at:
http://www.geocities.com/SiliconValley/2504

System requirements, and the standard features of FTV are described
in the
following page:
http://www.geocities.com/SiliconValley/2504/ftv.htm

By the way, AM signals from low orbiting weather satellites are also decoded - no extra interfaces needed. Demodulation mode is user selectable
in software.

Hope you all have a load of fun receiving 'words and pictures' - I hope to
get some feedback !

Happy New Year 1997
All the best from Brian, 9H1JS, on the Island of Malta.

At first I thought this was a gag, but when the caller to NPR's "Car-Talk " said he was moving at 17,500 mph and was 200 miles north of Hawaii I took notice. One of the Astronauts had called in to talk to the Car-Talk guys! Apparently they let him use their shop back when he as in college. Pretty cool! (I heard it 18 Jan). I imagine the will post it soon on their Web Sit using Real Audio.

This sounds kind of unbelievable, but I found it somewhat easy to accept because I've talked to astronauts and cosmonauts in orbit (on 2 mweter FM phone)

Kevin,

A couple of points to note:

- your scanner will probanly have insufficient bandwidth to receive the full content of APT transmissions on 137Mhz. My AR8000's bandwidth is too narrow on narrow band FM, and way to wide on wide band FM. Either modify your scanner or buy/build a dedicated receiver.

- you can decode pictures using a dedicated hardware interface (best approach) but there is software around which uses a soundblaster card to decode pics. I have tried it and was not impressed with the results, although some people have had more success.

- if you are interested in receiving and decoding weather satellite pictures, why not join the Remote Imaging Group here in England. Membership costs GBP12 for overseas members (I think) but it is spectacular value - the journal is well written and full of interesting topics. I built a receiver and PC interface based on RIG designs for under GBP 100, and can receive great pics from NOAA 12 and 14.

Let me know if you need more information. I suggest you mail me directly if you do, on 10611.3615@compuserve.com

Regards,

Zubin

Yes Jerry Linenger is a "HAM" his call is KG5HPR, I had a contact with him
on STS-64 (Discovery), on 10 Sept 94, also with Sue Helms (KB5SWR) on the
same flight 4 days later.

From: wmeara@erols.com (Bill Meara)
Subject: Rebellions in Space!!!

I was watching The Learning Channel last night. They ran a program
astronaut/ cosmonaut health. Norm Thagard was interviewed. At one
point they mentioned an American Shuttle astronaut who - while on a
space walk- was overwhelmed with the wonder of it all and essentially
refused to come back inside. Had to be dragged back in by the tether!
Did this really happen?

They also reported on a rebellion by a MIR crew. Disgusted with their
ground controllers, they turned off their radios and wouldn't
communicate for several weeks! Does anyone have info on this
incident?

Thanks 73 N2CQR

But if the "astronaut" or astronut was using a cellular phone, he'll have
a pink slip waiting for him upon his return to Earth. You can't even use
a cellular phone in an airplane let alone 200 miles up! Probably just a
radio show gag...

:> None of our spectrum should be assumed to be safe. There are
:> companies out there with viable business plans looking at all
:> of it. Improvements in technology have made this possible, and
:> growth in demand for wireless services has made it potentially
:> very profitable.
:
:I think this is absolutely correct. If we can't demonstrate that
:amateur radio is a service, not just a hobby, the new policies
:regarding spectrum usage will likely flush us right down the
:bowl.

Yet amateur radio is just a hobby and a lot of the amateur frequencys
are wasted and should be reassigned. All amateur bands could be
reduced by 50% with no loss to amateur radio.

> MIR packet simplex on 145.80
> MIR voice: MIR transmitts on 145.20
> I transmit on 145.80

Correction......
Wrong!! I just connected to Mir Packet the other day for the
jillionth time and the following is the freq plan........

145.800- (standard 600 offset) for BOTH VOICE AND PACKET.

In plain terms. Listen on 145.800 and transmit on 145.200. Listen
first. If you hear packet, don't transmit voice. If you hear
voice, turn off your tnc........

Have a nice day.

Does anyone know of a standalone box to
run the rotors and the transceiver tuning
for satellite tracking? I am not interested
in a kit or anything that uses my computer
ports. The SASI is interesting but doesn't
meet these criteria. The KCT uses the computer
and I don't know if it ties up any ports.
The TAPR box is ideal except for the price
and the fact that its a kit.

There was another one..... can't remember
the name or source though.

'Mutiny' may be a bit strong. It was probably something
more like a lively discussion with the flight director about the work load
which led to a 'day off' being put in the timeline for the crewmembers.
I think that is done on the flights now as a matter of routine.

Back in the Skylab days, I think one of the crews really did let their
feelings known about the work load and the lack of free time. They
were subsequently given 'off days', etc.

When the planners set up the schedules on the ground during the
planning stages of the flight, 'reality' doesn't set in until the crew
is actually performing the activities and the schedules are or are
not being met. Usually, the planners are pretty good about it, but
on a flight manifested with beaucoup experiments, the schedule
can and does go through all kinds of revisions during the flight.

Those tracking the MIR should be sure their Keplerian elements
are post 97008 due to a maneuver MIR made on that date.

No reason was given for this manuever, but it probably was for the
redezvous.
> Was it a maneuver for meeting the shuttle ?

> 2. Does someone know, why the Kepler-data of AO-10 are so old ?

Stacey E. (Chuck) Mills, W4SM, reports that
Ken Ernandes is attempting to obtain updated Keps, however the satellite is

apparently in an inopportune orbit to accomplish this. It has been
suggested that amateurs may be able to do better, at least for the next few
months by various ranging experiments of their own.. There have been
various discussion on AMSAT-BB on this. However, in the meantime, AO-10's
orbit doesn't change very fast. Parameters are now off by a bit,
especially at perigee. W4SM calculated the blon/blat, -125/5, about one
year ago and is waiting to see if predictions for this year hold up.

My call sign is MY business OFF the air. So is yours. If you don't like that, tough tetrodes!

Since when is a ham callsign required to post in usenet?

As I have said to someone here before, I do not give my callsign off the air.

If you need a callsign, my internet "callsign" appears at the top of my messages. Deal with it.

Thanks Dale. I knew it sounded authentic! I'm pretty sure it was Grunsfield. It was by far the most memorable call taken by Click and Clack! Could you fill us in on how the call was placed? Is this new equipment? Do the astronauts use the smae circuits to phone home?

Thanks. 73 Bill N2CQR

The box I'm looking for took its Keps from a computer file.

Microprocessors sell for about $5 or $10, and are even used
in $100 stereo receivers nowdays, so that shouldn't cause
a unit to be expensive.

I have the Fodtrack program.Using it to do doppler
tuning now. I don't want to build the tracking unit
and tie up a serial and a printer port also.
The program is excellent and its *free* so I may
end up buying the unit from AMSAT-CE. It only
costs $110 for the box and cables to the computer
and the rotor box. Still, there was a box...

Source record: 20221

Could some kind soul please point me to the FAQ about this group?
I have all the standard no-code Technician questions:

1) Can I talk via satellites using my dual band VHF/UHF 5 Watt hand
held? Can I talk to the shuttle and/or Mir?

2) Where do I find sources of tracking programs that will run on DOS
and Windows 3.1? Hopefully low-registration-fee shareware.

3) How do I learn which satellites I can talk to and listen to on VHF
and UHF FM?

4) What are the recommended antenna set ups? Starting with a roof
mounted VHF/UHG discone and working on up to dual band VHF/UHF
hand-held Yagis and thenup to dual axis rotators and control
software.

5) When I upgrade to General later this year, all the above questions
but with HF included?

I bet I am about the millionth person to ask all these questions. I
bet you are pretty tired of seeing these same beginner questions over
and over again. Where might I find the FAQ?

I can find out exactly how the call was placed tomorrow.

But, in the past, it was simply a patch from the air-to-ground loop through the Mission Control Center's Commcontrol to the Public Affairs Office's Audio Control Room. The ACR either made the actual landline phone call to or took the call from NPR. The line quality was checked, then patched to MCC where it was again checked on the ground. Then it was switched to the a/g and Grunsfeld probably did a voice check to confirm audio quality both ways. Then or a few minutes later, the 'phone call' was made with the Tappett Brothers.

This is pretty much the norm for the inflight media interviews (e.g., news media, radio/TV stations, etc.) since the Apollo Program. They are done on the open a/g circuits with landline interface at MCC & PAO.

As far as I know, the only time their comm is made private (imbedded in the digital downlink?) is during medical conferences with the flight surgeons or during private family conferences.

Details concerning the call can be found at
http://www.cartalk.com/About/Space/index.html
Real Audio is also available.

NPR is cool and so are Ray and Tom. Many markets rebroadcast Car Talk
on Sunday, I believe it is live on Saturday. N2CQR's post made me make
certain that I listened to the rebroadcast yesterday.

John Grunsfeld placed the call using a cellular phone and the signal
was relayed by a high-orbiting satellite. When the call was made the
shuttle was about 200 miles north of Hawaii over the Pacific.
Grunsfeld was more specific about the details of the call and
hopefully it is in the Real Audio file.

Yeah, at least you can get the main screen up if you reboot to DOS mode,
but when you give it the run command, it crashes and burns. It appears
to put the SVGA card in a very strange mode. The monitor goes into sweep
protect. And the only way out is a hardware reset. That's with it configured
for the default 640x480 mode, which should work on any hardware. I haven't
tried it yet in 1024x768. PC is a 100 MHz 486DX4 with 16 Mb RAM running
Windows 95 and using an ATI Mach64 video card and a Soundblaster 16 sound
card. I configured the EMS memory, and at sign on the program Oks that and
finds and checks the sound card Ok too. But give the Run command and the
screen goes dead and the machine locks solid. Not pretty.

279. Software for doing system noise calcs?

Newsgroup: rec.radio.amateur.space
Date: 1997-01-21 00:00:00 UTC
From: au156@yfn.ysu.edu
Message-ID: <5c3b78$m3d@news.ysu.edu>
Source record: 20083

I'm looking for a simple shareware program that will make it possible
to evaluate the path losses and system noise for a system comprising
an airborne transmitter and earth-based antenna, preamp, feedline,
and receiver.

The important part is the system noise temperature, but the path loss
and output carier-to-noise would be nice to have, too. This program
should accomodate total antenna effective noise temperature; and the
noise temp. of the preamp and receiver, of course

Niceties such as separate inputs for cosmic noise, earth thermal
noise as seen by the antenna, and other refinements are good
but not necessary.

This is to answer a question about the performance of an amateur radio
application (high altitude balloon beacon). A *quick* search of Oakland
did not yield anything that looked appropriate.

Anyone have any obscure ham or *industry* software that will handle this?

Hank Riley, N1LTV

280. Space Shuttle Plasma-Scatter DX Opportunity

Newsgroup: rec.radio.amateur.space
Date: 1997-01-21 00:00:00 UTC
From: Mark Gingrich <grinch@rahul.net>
Message-ID: <5c3g1f$8rk@samba.rahul.net>
Source record: 20084
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.misc,rec.radio.amateur.space

On Wednesday morning, 22 January, around 7:47 a.m. EST (12:47 UTC), the Space Shuttle Atlantis (STS-81) is expected to touch down at the Kennedy Space Center. (If weather conditions don't allow, landing may be delayed for 90 minutes, still with KSC as the destination.) Assuming all goes as planned, about 25 minutes prior to landing, as it approaches the coast of British Columbia, the orbiter will experience sufficient atmospheric friction to create an ionized wake, a condition persisting for nearly fifteen minutes as the craft streaks like a meteor over the southern parts of Alberta and Saskatchewan, above central North Dakota and Minnesota, eventually passing almost directly over the heads of Chicagoans. This trajectory is nearly identical to the re-entry of STS-79, on 26 September last year.

DXers working VHF frequencies -- TV, FM, 2-meter, and 6-meter ham bands -- who reside within a thousand miles of all but the easternmost re-entry track will have a rare opportunity: the Shuttle-generated plasma trail may enhance reception of over-the-horizon signals, much like meteor scatter. Meteors, known to be just pea-gravel-sized flotsam colliding at high speed with Earth's atmosphere, create narrow ionized columns for a few seconds; in contrast, the near-airliner-sized Shuttle should cut a much larger plasma swath over an interval of minutes. Such temporary plasmas scatter very-high-frequency radio signals over the horizon, whereas normal reception is limited to line-of-site distances from the transmitter. Shuttle plasma effects may persist for as long as a few minutes.

DXers should tune to a known distant station in the general direction of the Shuttle's re-entry track -- that is, if you are south of the track, try for a northern station, on a locally unoccupied, interference-free frequency.

- Re-entry Time Line -

If the re-entry goes as planned, the time line is as follows:

Event Time UTC EST CST MST PST

Arrives British Columbia 12:23 7:23 6:23 5:23 4:23

Overflies Calgary, Alberta 12:26 7:26 6:26 5:26 4:26

Overflies Fargo, ND 12:29 7:29 6:29 5:29 4:29

Overflies Chicago, IL 12:32 7:32 6:32 5:32 4:32

Overflies Cincinnati, OH 12:33 7:33 6:33 5:33 4:33

KSC Touch down 12:47 7:47 6:47 5:47 4:47

More detailed predictions (containing "look angles" at best visibility
for various locales) are available at the end of the document found at:

http://shuttle.nasa.gov/sts-81/orbit/orbiter/sighting/sighting.html

Also, check out the groundtrack maps for both the primary and secondary
landing attempts at:

http://shuttle.nasa.gov/sts-81/landing/grtrack

Note that only observers west of Illinois will have a decent chance
at a visual sighting of the Shuttle, due to lessened interference from
sunlight/twilight. The sonic boom, however, may be noted by anyone
in the vicinity of the re-entry track; be aware that it occurs a few
minutes *after* the Shuttle's closest approach to your location.

- Last-Minute Sources of Information -

Weather conditions at Kennedy may cause last-minute postponement of
the landing. The following Web site provides weather status:

http://www.ksc.nasa.gov/weather/weather.html

Last-minute information about the Shuttle's re-entry/landing status
is available at:

http://shuttle.nasa.gov/

Also, last-minute schedule changes are usually reported on the hourly
national news (e.g., CBS Radio affiliate stations, CNN, etc.) and on
NASA TV.

I would be especially interested in receiving successful (or even un-
successful) reports of DX catches made possible by Shuttle plasma scatter.

Good luck!

281. Re: Astronaut phones "Car Talk" !!!

Newsgroup: rec.radio.amateur.space
Date: 1997-01-21 00:00:00 UTC
From: Phil Collier <103446.1373@CompuServe.COM>
Message-ID: <5c3ghufai1@mhade.production.compuserve.com>
Source record: 20085

>was conducted via the air-to-ground with

>the Johnson Space Center's Mission Control

>Center, their Public Affairs Office, and and NPR

>on Thursday or Friday.

That was a pretty amusing stunt they pulled. The rather

heavily processed shuttle audio was easily recognizable,

and of course there were lots of hints about Rockwell,

two minute engine burns, etc. It would have been fun to

have Nasa TV on when that was being set up...I guess the

astronaut still owes the Tappit Brothers $5.00 for the use

of their tools :-)

First time I've ever heard of a call from orbit to earth

for the purpose of having some fun on a talk show. Was it

NPR's idea, or was the Atlantis crew looking for a good

stunt to pull on a radio show?

PHil,

KG2DH

Howdy Marc, I haven't found a satellite FAQ but wonder if you have
visited the following?

Satellite Frequencies -- via KG5AI Pages

Work the Satellites -- AMSAT Pages

Ashley's Space World -- Amateur Radio In Space.

The Satellite DX Foundation -- DX in the sky

Amateur Radio Satellites -- KitSats Via KB1SG

SAREX -- Shuttle Amateur Radio Experiment

MIR -- Russian Space Station
--
Go to the DX Reference Guide below and then to the Index and
"Satelittes".

Hope this helps.

Oh, well.......

I think it gives a friendly and nice atmosphere to this group, since most
of the writers include their call. But judging from your mail you dont seem
to be interrested in keeping that atmosphere.......... It's as they say:
You get what you ask for!

Works for me 486 - 33mhz, 8meg, soundblaster, etc
(Gotta use EMM386 or as Don has Qemm.)
Decoding takes some tweaking but I got it working in the ham
bands on rtty and weather FAX.

Every decoder I have (hardware) really takes tweaking and
experience, I am still evaluating this
software (shareware), but it looks promising.

I also run ATI Mach64 card. (also QEMM)
My vidio card required the VESA driver.

This card has some strange behaviour with
programs that make VESA calls without the
driver.

Look for 64VBE200.ZIP from ATI. Contained
in this .ZIP is the driver M64BE.COM which
is a DOS TSR.

BTW the program runs in an OS/2 DOS full screen
session (with the tsr installed.)

Howdy from Helena, Montana - I am looking for a vendor or source for a 2.4GHZ receiver for the Phase 3D Satellite going up this summer. I have the antennas but don't have a clue to vendors for 2.4GHZ. I have 1.2 in my TS790 for uplink and would like to have 2.4 downlink. Thanks from Bill

Try the 2.4 GHz converter from SSB Electronics. It is a converter down to 144 MHz that can be mounted directly on the antenna. You can feed it with some low cost coax and the power can go through the coax cable. Weatherproof housing, looks like a mast preamp and has very low noise figure.
I used one for 2.4 GHz on AO-13 with good results.

Hello Dave:

Here in the UK the MIR frequencies for both voice
and packet are:-

Uplink 145.800Mhz
Downlink 145.200Mhz

(Also now used by Shuttle)

Being new to this group I hope I have understood
your query correctly.

If you listen to the 'phone call,' you will hear John Grunsfeld
describe the path of the 'call:' Atlantis to TDRS satellite.
After that the signal following this path: TDRS satellite to
the ground (NASA Ground Terminal, Las Cruces, NM,) then
to Mission Control Center in Houston, then via landline to
NPR's Car Talk.

He is likely using the normal air-to-ground circuits as are used
for the normal communications with the MCC and with the
news media for interviews, etc. No special cellular phone or
anything exotic like that.

Well, I might be able to help you with that. Make sure you have your
EMS memory manager installed in config.sys, and make sure it isn't set
for NO EMS (that's the default way it'll be with Windows). Just delete
the NO EMS from the line and reboot.

This is a new use of the WWW that can benefit ham radio operators throughout the world.

You can now schedule contacts with hams all over the world simply and easily by using the WWW and e-mail.I have set aside a section of my web site http://www.sarrio.com for hams to post their request for over-the-air schedules. Included in each posting is a place to list the posters specific ham radio contact needs (countries, zones,IOTA, grid squares ect...). The postings will also include an e-mail link that will allow hams that read the posts, to easily request an over-the-air schedule.

Cyberscheds are a simple way to have the internet work to the benefit of hams all over the world.

All posting will stay on-line for 6 months, or until the posting is asked to be deleted. Below is an example of one cyberpost visit the cyberpost page and view them all. Below is an example of one of the postings:

Station: BV/N0IAT

Name: Joe Fitter
QTH: Taipei, TAIWAN Republic of China
Bands: 40/20/17/15/10
Mode: CW (occasional SSB, but not much)
Comments: Looking for South America, Central America, and Carribean QSO's.
I QRV from a
neighbors shack (local law), so operating times are limited to station availability. QSL via my CBA --

304. Sat weather maps the cheap way: questions o plenty...

Newsgroup: rec.radio.amateur.space
Date: 1997-01-23 00:00:00 UTC
From: helling@uwindsor.ca
Message-ID: <E4G89B.B0x@news.uwindsor.ca>
Source record: 20108
Cross-posted to:
rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.space,rec.radio.scanner

A few questions on the fine points of weather satellite image
reception...
(on a shoestring budget.......)

I have read the article in Nuts and Volts, picked up the LM741
fuzzbox interface for my Pc (it does reemble a crude guitar
fuzzbox effect...what an odd way to get square waves!!!!)

My ancient heathkit GR-64 has a BFO, am bust dusting it off,
Won't hook the mess up until I get an isolation xformer for
the patch...

AND.... Tadah.... just scored an ancient Radio-shack PRO-33
20 channel scanner for that all-important 137 MHZ reception...
As the scanner tunes in 5KHZ steps, it might even
tolerate the reported doppler shift...

SO......
1) Assuming I find an antenna, will the little 741 interface
and the shareware program for weather fax I got with it do the
job for 137 MHZ reception ?

2) the Nuts &volts article has a diagram of a double crossed
dipole antenna. Bottom cross must be grounded as "reflector",
right? Top one is PVC and wire along the sides, just like the
ancient RLL handbook design... OK. but what length??? The
formula in my 1970 Arrl book doesn't look too useful over 50MHZ
or am I banging the calculator wrong???

Any suggested lengths???? Got baling wire o plenty...
(then off to the cable co dumpster for coax.... and away we
go...)

3) I am really interested in the High Orbit 1691 MHZ sat
images... But that $US600 downconverter.... ulp...
On the other hand, I garbage picked an old sat reciver a while
back (swapped it off.... they aren't worth much if they don't
de-cypher) Now.... hmmmmm..... Conversions anyone???

3B) Those really cheap mini-sat disk systems being sold to
hook one in to paying subscription fees forever.... wonder how
modifyable these are....

Ok...at this point my ignorance is REALLY SHOWING, but heck...
one week ago I was ripe for a Ramsey 137 MHZ kit (fortunately

I am perpetually broke), and then I pick up the scanner at a 2nd hand store for CAN$30.... As a bonus, I get to hear the walky-talkies at macdonalds 4 blks away (YAWWNNNNNNN!)

This sat stuff looks great.... (I used to mess with electronics and DX a bit, went to University, got useless degree, decided to have FUN, went to ART school, got a REAL USELESS DEGREE, and now do gallery sized set-ups involving wonky technology... Still can't draw worth a %$&....
So what If I recycle a few sci-fi plot lines here and there...

TRY this....
Sat receiver => computer => stored images scripted to slide show mode, adding latest image to end => cheesy VGA-2-video coverter => rented scan rate doubler => rented video projector high up projecting on the floor of a darkened room...

OOOOHhhhh..... View from a height....

The pro sat pictures from high orbit would be best, but the low orbit ones are a good start...

Any tips, sites, advice, apreciated big time...
Thanks & regards.... B/H

Hello again:

To clarify, the source of the frequencies quoted
was 'Radcom', the journal of The Radio Society of
Great Britain - the UK equivalent of ARRL.

The old 145.550Mhz up/down link was quit by MIR
when Shuttle/MIR docking became more frequent. The
new frequencies I quote will be used by MIR and
future Shuttle SAREX missions according to the
amended 2m bandplan issued recently in the UK.

===
Please be advised that the 2m band plan in the UK
and the US does differ somewhat and on previous
Shuttle SAREX missions the European frequencies
were different from those in the USA.

309. TrakBox questions

Newsgroup: rec.radio.amateur.space
Date: 1997-01-23 00:00:00 UTC
From: Philip Peake <philip@vogon.rain.com>
Message-ID: <32E7BD1F.64DB@vogon.rain.com>
Source record: 20113

I have just finished building a TrakBox, and after a few glitches it
now appears to work fine.

However, I have some operational questions, the answers to which
I don't seem to be able to find in either the supplied (TAPR)
documentation, or in the notes with the 3.30i ROM.

I am using it in conjunction with an FT-736, using the CAT interface
for doppler correction.

Questions:

1. The doppler correction step is 100hz, which is (to my mind)
a bit big for SSB working. The ROM notes mention a 50Hz step,
and the "Show Config" menu item lists the step frequency as 100Hz,
which suggests that it can be changed - how ?

2. Although it is possible to step the Rx frequency up/down with the
+ and - keys, there doesn't seem to be any similar functionality
for the Tx frequency. Yes, I know you can specify 4 Tx frequencies,
and I know that I can enter "host" mode and change the Tx frequency
from thre - but it seems rather cumbersome.
So what is the normal operating procedure (on Fo-20 and Fo-29 for
example) ? How do I adjust my Tx frequency onto that of someone
calling CQ ?
Are there (maybe) just a limited number (4 ?) of recognised
"channels" on these sats ?

Philip

Hello Ken,
So far I do not know any equip.wich works with out data infos,orbital information.Up to the present,that means, all antenna tracking devices I know,are connected to a source wich gives to the converter (a/d),the info. to wich place the antenna has to point and the source normally ia a sat tracking softer as Instantrack,Nova or similar.
The one you mentioned,takes the info from some place where it is stored and unfortunately you will loose one of your serial/parallel ports to do the job.
I'm using Nova for Dos and the SASI-Y for Yaesu 5600G A/E dual contr. and the set up work really well.In other words,one port for the doppler the other one for the antenna tracking sys.
Best regard and 73,
Nicolau - PP8DA

Philip,

I have never used the T_B mic click tuning, but under configuration then is a place for setting the mic click, and in that is the step size. This _may_ be what you want.

As for the four channels. The TB is primarily aimed at working the digital birds, which have 4 or less uplinks. The analog birds of course have no such channels. To operate the analog birds, most people use a program which drives the T_B in the host mode. That way, the T_B is basically just a dumb interface.

The only widely distributed program I can think of is Mike Owen's NOVA program. Several other people have their own private versions, which may or may not ever get widely released.

Hello there. I am Jim Haas, KG9IF, QSL/Contest/Awards Manager for the Husky Amateur Radio Club, W8YY, which is the amateur radio club of Michigan Technological University in Houghton, MI. Every year over a festival known up here as Winter Carnival, where everyone takes a couple of days off to enjoy the snow (we get a lot of that up here), we run a special event station. This year's station runs from 1100Z on 30 January 1997 (6:00 AM Eastern) to 1100Z on 1 February 1997.

"So Jim," you ask, "what do I get for working this station?" Well, if you work our station, just send us a self-addressed, stamped envelope suitable for holding a certificate and we will send you just that--a really nice certificate that says you worked W8YY over Winter Carnival.

Below is the frequency list, which is a general guideline and not a promise of where we will be. I can guarantee one thing--if you look around, we will be there. We may not be on, for example, 14.325 exactly, but we'll be on 20 somewhere. We may also do some HF digital modes (we still need a few connectors for that) and some satellite work as well. If there is enough interest among the station ops/control ops, we will work some CW as well.

If you have any questions, comments, or criticisms, just drop me a line at jdhaas@mtu.edu. We look forward to hearing you on the air.

>
~~~~~~

The APT signal is about 38KHZ wide, so the scanner
won't yield a useable signal until it's modified.
Usually a resistor across a couple of the IF ckts
will lower the Q enough to get by. You might have
to change a filter. Either way, the signal to noise
ratio is degraded by increasing the bandwidth, so
a pre-amp at the antenna will be helpful.

SB SPACE ARL ARLS002
ARLS002 Ham-astronauts swap spots aboard Mir

Ham-Astronaut Jerry Linenger, KC5HBR, has become the fourth American to occupy a position on the Russian Space Station Mir. Following the docking of Atlantis to the Russian space station on January 14, Linenger officially traded places with fellow ham-Astronaut John Blaha, KC5TZQ, who has since returned to Earth. ''We're truly in the space station business,'' said Blaha, who completed 118 days as a Mir crew member.

Linenger spent his 42nd birthday aboard Mir on January 16. ''I could not think of a nicer place to have my birthday,'' he told Dave Larsen, N6CO, during a packet QSO January 17. Linenger will remain aboard the space station until May.

It's not known how active on ham radio Linenger expects to be during his stay aboard Mir.

Look on the Amsat web site somewhere for FODTRACK. There's a circuit for a controller that runs off a parallel port, and software which will control both the rotors (AZ and EL) *and* control your radio's doppler shift in real time. The radio is controlled from a serial port. It's a DOS program which works under DESQview or straight DOS. I haven't tried it under Windows yet. I have the serial interface, and that part works. The rotor control is waiting for time to wire it all up.

Good luck,

Greg KO6TH

>>these days he'll get lost.

Excuse me if I'm off-base...

You're concerned that he may get lost...but he's "electronic gadget-aware" enough to interpret a GPS?

Of course, a GPS is useless if its data cannot be transmitted to a "locating party." Make sure he's also equipped with reliable, easy-to-use radio gear. With pre-designated emergency channels. The FRS is totally unsuitable...GMRS is UHF and "clean" - and it may be a viable alternative. Of course, check out his favourite hiking areas...there may be Amateur repeaters available (like in Yosemite!).

Your plight is interesting...please keep up informed as to what you decide to do - and how you present it to your Father.

Heavy Duty 10' dish with bulls-eye feed horn. Two C bands are on the feed horn now. RX is a C and Ku General Inst. Will trade for multiband HF beam or various ham items. Will also sell. Make offer.

328. X-Q antennas for EME?

Newsgroup: rec.radio.amateur.space
Date: 1997-01-25 00:00:00 UTC
From: sbabb@lpub.com
Message-ID: <5cdnpj$apf@news-central.tiac.net>
Source record: 20132
Cross-posted to: rec.radio.amateur.space,rec.radio.amateur.antenna,rec.radio.amateur.misc

Has anyone tried expanded quad (x-q) antennas in EME arrays?

An x-q antenna uses ~2 wavelength loops as opposed to the ~1
wavelength loops in a regular quad. Actually, the x-q 'loop'
is broken by an insulator at the halfway point from the feed.

The 3rd edition of Orr & Cowan's _All About Cubical Quad Antennas_
(ISBN 0-933616-03-1) claims that a 2 element (DE & REF) x-q with
0.125 spacing gives 9.5 dBd of gain. A regular 2-el quad is about
7 dBd and a 2-el Yagi is about 5.5 dBd.

Given those numbers, I would think that it would be possible to
build a 4 antenna array of modest length (at least compared to the
usual EME beams) antennas with over 20 dBd of gain.

Comments? Experiences? Computer models?

331. CSETI Press Release: A Call For Government/Military Witnesses

Newsgroup: rec.radio.amateur.space
Date: 1997-01-25 00:00:00 UTC
From: "Steven Greer M.D." <103275.1472@compuserve.com>
Message-ID: <5cduhd$49h@mtinsc03.worldnet.att.net>
Source record: 20135

Please refer to the CSETI web site to find out more about this historic gathering and the release of national security oaths relating to this subject:
HTTP://www.cseti.com

PRESS RELEASE FOR MEDIA AND NEWSGROUPS

CSETI HEADQUARTERS, ASHEVILLE, N.C.
25 JANUARY 1997

BEGIN:

The Center for the Study of Extraterrestrial Intelligence (CSETI) through its Project Starlight initiative, has identified a significant number of first hand United States government, military and intelligence programs witnesses to UFOs of extraterrestrial origin.

In an effort to widen the scope of these investigations, CSETI is calling for additional government UFO witnesses to come forward, and for the US Congress to hold open hearings where these witnesses may testify without fear of reprisal.

CSETI has received legal opinions that the ongoing, extra-constitutional covert management of this subject is in violation of the US constitution, and that therefore the witnesses to these events are not legally bound to silence by pre-existing national security oaths on this subject (see attached documents).

In a letter dated 15 November 1996(enclosed) CSETI stated this position, and asked for relevant feedback from the White House, key members of Congress, the CIA, and other government officials. The letter also stated that, unless otherwise directed (UNODIR) we would regard these witnesses as free to speak openly about this matter as of 1 January 1997. None of the agencies or government leaders, all of whom acknowledged receipt of the letter, provided any policy, guidance or refuting materials by 1 January 1997 to correct this position.

Additionally, under current legal opinion, these witnesses are now considered free to speak without penalty, punishment or reprisal because of provisions provided by the Congress within the so-called 'Whistle Blower' legislation. This legislation, designed to allow government employees and government contractor employees to come forward with information regarding corruption and wrong-doing, protects these government UFO witnesses from any punishment or reprisals. This protection extends to both government employees and civilian employees of private

government contractors.

Given the illegal and extra-constitutional nature of current covert projects dealing with these issues, CSETI maintains that government and government contractor witnesses to UFO programs and events have a constitutional obligation to come forward with information on this subject, and are encouraged to do so .

CSETI will be convening a closed meeting of such witnesses in the early spring of 1997, and will be asking members of Congress to hold open hearings where these witnesses may testify.

Since the current covert management of this issue constitutes a grave and growing threat to the national security of the United States, CSETI is asking that these hearings take place by this summer.

Any government employee or government contract UFO witnesses who would like to cooperate with this initiative should contact CSETI's International Director Steven M. Greer M.D. as soon as possible. CSETI has determined that assembling numerous such witnesses in a coalition, to come forward in unison, is the safest and most credible way to move this subject to public disclosure.

These prospective witnesses should contact Dr. Greer at:

704-275-5671 or
Fax: 704-274-6766
email: 103275.1472@compuserve.com
or write: CSETI PO Box 15401 Asheville NC 28813

END PRESS RELEASE

EVALUATING THE VALIDITY OF NATIONAL SECURITY
OATHS RELATED TO THE UFO/EXTRATERRESTRIAL
SUBJECT

copyright 1996 Steven M. Greer M.D.

A number of first hand military, intelligence and government-associated witnesses to covert projects dealing with UFOs and Extraterrestrial Intelligence (ETI) have been identified by CSETI's Project Starlight effort. Over the past three years, we have located several dozen such potential witnesses as part of a comprehensive strategy to collect adequate evidence for a global, definitive disclosure on this subject. The story which these important government witnesses can tell will make a credible, undeniable case for the reality of UFOs and the existence of extraterrestrial life forms in proximity to the earth.

One of the persistent obstacles to this testimony coming out into the public arena has been the issue of so-called national security oaths and restrictions placed on these witnesses. Some feel that

they are not free to speak unless 'released' from these national security oaths and restrictions, and so we have been working to encourage Congress and the White House to take actions which would remove these restrictions.

In the summer of 1995, a number of these witnesses gathered at a witnesses summit, and we all signed a letter to President Clinton asking him to take actions leading to the release of these restrictions. While receipt of this letter was acknowledged by a special assistant to the President, we still await specific action from the executive branch of the US government.

With this said, it is important to visit the question of whether or not such national security oaths and restrictions are themselves legally valid.

We have compelling witness testimony that the operations dealing with this subject currently exist, and have existed for several decades, outside of normal governmental projects. Members of the Project Starlight Team have met with very senior members of the Administration, Congress, the Joint Chiefs of Staff, the CIA and other relevant government agency operatives. The picture which emerges from these discussions is that of an operation dealing with UFOs which is functioning outside of the normal channels of government, as it is usually considered. Indeed, we have found that the most senior levels of the executive branch, Congress, the military etc. are totally out of the loop on this extraordinary matter.

This then brings up the sobering question of who is in the loop, and under what authorization are such projects operating? It is our assessment that for the large part, these operations do not fall under any constitutionally sanctioned avenues of authorization, and as such are, perforce, illegal.

Aside from the lack of oversight and authorization from the executive branch and Congress, these operations have, from time to time, engaged in deceptive practices which have frustrated the organs of constitutionally legal inquiries and democratic processes. Any such operation which behaves in this fashion unilaterally removes itself from the inherent legality and protection which exists for projects which are consonant with constitutional law.

This being the case (we are eager - nay, desperate- for someone to prove otherwise...) all of the so-called 'national security oaths' and other 'restrictions' placed on military, intelligence and government contract workers are null and void. That is, they appear to have no legal validity since the operations for which they were obtained are themselves illegal. In a constitutional democracy, it is a basic requirement of law that such operations be constitutionally legal, and if they are not, then all that flows from them - including such 'oaths'- are illegal and therefore non-binding. IF these operations are legal, nobody in the Congress, executive branch or senior

military with whom we have spoken knows of it. The production of a single current executive order or congressional directive authorizing these projects, which can be independently verified, would convice us otherwise.

More than one covert contact has told us that, indeed, any such witnesses can and should speak out at the right time and place since no legal entity would - or legally could - do anything about it. We agree.

Beyond this, it is the legal, moral and patriotic duty of such witnesses to come together, and at the highest, best and most credible venue possible, speak out in unison regarding the truth on this matter. Granted, if only one or two such persons come forward, the case will be weak, and the risk will be unacceptable. But if ten, twenty or more such witnesses come together, and united, resolve to share their information and experiences on this subject, then a definitive case will be made , and a great service to the world and their country will be fulfilled.

The return of this matter to the legal channels of government and the deliberation of the people is one of the great unfulfilled tasks of the post cold war era. Over half a decade has elapsed since the end of the cold war, and there can no longer be a justification (if there ever was) for this type of extraordinary secrecy and covert agenda. Both national and world security requires that this matter be returned to the world community as soon as possible.

We recommend that men and women of vision, courage and dedication join with us in fulfilling this task. Far from being a legal violation of 'security oaths', the public testimony by such witnesses is a highly moral and legal act. Further, is it not true that the continuation of this secrecy itself is illegal and immoral, given the inherent unconstitutionality of such programs? Credible witnesses, joining together and providing their testimony in a united strategy can return this subject to legal oversight and control, and thereby enable the people of our country and of the world to begin the public deliberations which should have occurred 50 years ago.

National Security Implications of the
UFO/ETI Subject: A brief summary

National Security Implications of the UFO/ETI subject are profound and far-reaching, albeit currently largely unrecognized.

These implications may be considered in separate but related aspects: those intrinsic to ET activity and those arising from current covert management of the issue.

Historical Background:
Early National Security considerations dealt with concern over

public panic arising from the detection of near earth and earth-landed extraterrestrial spacecraft (ETS)and from the technological implications of advanced Extraterrestrial material as it may impact the arms race and cold war. Additional concerns were related to the impact on religious belief systems, the political order and economic systems.

Importantly, once actual ETS were retrieved in 1947, thereby allowing Extraterrestrial hardware to be studied and back-engineered for possible human military applications, the need for complete secrecy regarding the matter was deemed paramount by authorities at that time. Given the tensions of the early atomic era and the mounting 'cold war' with the USSR, it is understandable that the introduction of Extraterrestrial technology was thought to be destabilizing to an already dangerous situation. Moreover, given the history of technological secrets related to atomic and hydrogen weapons being stolen by agents of the USSR, there was understandable concern that any technological breakthrough related to Extraterrestrial technology might find its way into Soviet hands. If such an event enabled the USSR to produce actual military applications before the US, obviously this would have placed the US military capability in a potentially catastrophic disadvantage.

Since the 1970's, we have reason to believe that a degree of cooperation on this matter has evolved with the USSR and the US and perhaps other nations. Certainly the end of the cold war has largely removed earlier concerns vis a vis technological breakthroughs and the fear of Soviet aggression.

Moreover, the psychological reasons for secrecy related to public panic are not valid today. At least 57% of the population accept that UFOs are real and are of Extraterrestrial origin. And 30-40 years of space exploration by human society has prepared the population for the possible existence of other Extraterrestrial civilizations capable of space travel. In short, the previous concerns motivating secrecy are not relevant today.

Intrinsically, there is no reason to believe that the Extraterrestrial presence poses a threat to the national or world security. If hostility and aggression were related to their purpose here, it is likely that events congruent with hostility would have transpired long before now. It is our assessment that the Extraterrestrials are not hostile, but are very concerned with human capability related to warfare and the militarization of space. Activity by Extraterrestrial assets related to the neutralization of ICBM facilities and to containing military oriented space exploration should be understood in light of their concern over a known history of human aggression which has been coupled with the advent of weapons of mass destruction and space exploration. Indeed, given the past history of human military assets focusing on and pursuing Extraterrestrial Spacecraft, we believe the Extraterrestrials have

responded with remarkable restraint.

Ironically, the threat to national security exists not with the Extraterrestrial presence, but the current covert management of the subject. In the absence of Extraterrestrial hostility over 50 years, current secrecy cannot be justified on the basis of fear of Extraterrestrial aggression. A disclosure related to the Extraterrestrial presence, if calmly and rationally presented, will not cause public panic in the US or elsewhere. 1995 is not 1945, and world society has evolved to the point where this information can be assimilated in a positive fashion.

In contrast, the covert and apparently extra-constitutional management of this matter is a real threat to national and world security, and undermines constitutional freedom and democracy. Unless it is terminated, this covert management will greatly harm US national security and the chances of a lasting world peace.

It is our assessment that the current covert management of this issue involves the following elements which are a direct, immediate and ongoing threat to the national security:

1. The continued denial of the Extraterrestrial presence creates a situation where a sudden, undeniable, public Extraterrestrial event could induce panic, since proactive disclosure efforts which could ameliorate public fears are non-existent. It is likely that such a public Extraterrestrial event will transpire within the next 2-10 years or sooner. Therefore secrecy and denial are a real threat to national and world security.

2. The current covert management of this issue appears to be operating independently and outside of the constitutional chain of command. The group controlling these operations, which involve reconnaissance, Extraterrestrial technology reverse-engineering, and space - based targeting of ETS (among others) is non-responsive to congressional or Executive branch oversight and control. This constitutes a real threat to the national security and to constitutional democracy and freedom.

3. We have credible, first hand sources who insist that extraterrestrial spacecraft have been targeted by human covert space weapons and on at least two occasions have been destroyed. If true, the risks to world peace and security are real and imminent, and the continuation of these covert activities constitute the gravest dangers to national and world security . Hostile actions taken by human covert assets against Extraterrestrial assets constitute a grave and immediate threat to the national security. A relatively small , covert entity , acting without consultation with the United Nations, the Congress, the President of the United States or the public is engaging in actions on behalf of all humans which endanger the earth and world peace. Unless controlled, these actions could precipitate interplanetary conflict and a disaster for the world

generally and the United States specifically. This covert management must be terminated and control of this issue returned to constitutional authority and to the public domain.

4. The concentration of the technological advances related to the reverse-engineering of Extraterrestrial technology into the hands of a small covert operation constitutes a threat to the national security, to world security and to the future of the earth. These Extraterrestrial technologies, which have been the object of covert research and development for over 45 years, are potentially of great benefit to humanity if used wisely for peaceful purposes, but are of immense danger when concentrated into a small covert operation which is unresponsive to the pubic or the legal and constitutional chain of command. The threat this poses to the US and world security is great, and the longer this situation continues, the greater the concentration of advanced technological power in the hands of a relative few. The secret control of such powerful technologies is inherently a threat to freedom, democracy and to our nation and the world. Its utilization for covert agendas outside constitutional control represents a grave danger to our country and must be restrained and reversed.

5. Importantly, secrecy and covert operatives per se constitute a real threat to the national security, since national security in a constitutional democracy can only be legitimately related to freedom and democratic government. Only in very rare and well-justified circumstances can extreme secrecy and covert operations exist, since by nature freedom and democracy cannot co-exist with unrestrained secrecy and secret power. The profound implications of the detection of Extraterrestrial civilizations cannot be allowed to be the exclusive domain of covert operations which are unrelated to public discourse and consultation. To do so is to undermine the US Constitution, democracy and freedom, and this constitutes a serious threat to the national security.

6. Finally, exclusive covert control of this matter has resulted and continues to result in the loss of opportunity for the world to come to terms with the Extraterrestrial presence in a peaceful and mutually beneficial fashion. This means that the people of the world, the United Nations and other international and national institutions are deprived of the opportunity to deal rationally with this issue. National and world security are therefore negatively impacted by the loss of opportunities in the following areas:

> The Environment, which is seriously at risk for large scale collapse over the next 100 years, would be profoundly improved if extraterrestrial technologies could be peacefully deployed. So-called zero point or free energy systems, which are non-polluting, would permit a sustainable technological civilization to exist on earth and would transform the earth environmentally and economically. Establishing peaceful and mutually beneficial

relations with extraterrestrial civilizations would eventually permit us to understand and apply such technologies.

>World unity and peace will be enhanced by the global realization that we are not alone in the universe. The acknowledgement of this fact will enhance the awareness that we are really one people living on the shared homeland of earth, and many of the conflicts currently afflicting the earth will be seen in a new perspective. This can be achieved without either deifying or demonizing the extraterrestrial presence, but rather placing it in a fair, scientific and neutral light. Eventually, world peace and a significant enhancement in the current geopolitical situation may result from the disclosure that we are not alone. An international infrastructure, and institutions capable of dealing peacefully with relations with extraterrestrial civilizations would, of necessity, evolve, and this in turn would strengthen world unity and cooperation.

>World culture, ideas, science and many other diverse areas may benefit through the development of peaceful relations with other worlds. While this process may take decades, if not centuries, its delay only puts off the time when the people of the earth will be united not only globally, but with other planetary civilizations as well.

In summary, it is imperative to the national security that the President and Congress undertake measures to terminate the secret, covert management of the UFO/ETI subject. Failure to place this matter in open, public discourse and control constitutes the gravest failure of democracy and government in the history of the world. That we do this is the test of our faith in democracy and our faith in the people. As the 21st century approaches, we must roll up the cancerous excesses of secrecy which are the legacy of the cold war and unfurl a new era wherein democracy is reaffirmed and a lasting world peace is given a chance.

FO-29 is currently in the digital mode, running 9600 baud BPSK.
The signal sounds a lot like an unsquelched FM receiver with no
signal. (See AMSAT news # 21, also posted to this group)

SAFEX,
(Uplink 435.750MHz FM, Downlink 437.950MHz FM,
Subaudible tone 141.3 Hz)
The repeater appears to be down at this time. See above bulletin for
further
information.
```

RS-12:
(Uplink 21.21-21.25MHz CW/SSB, Downlink 29.41-29.45MHz or
145.91-145.95Mhz CW/SSB)
The sat is giving extremely good downlink signals on 2 meters. In
this period of poor propagation on 15 m, the T-mode is providing very
easy access to the satellite. Interesting DX activity has been spotted
in Europe with stations in Egypt, Crete, Cameroon, etc.
[ANS thanks Stefano Badessi, PA3FWP, for this report.]

RS-10:
(Uplink 145.865-145.905MHz CW/SSB, Downlink 29.36-29.4MHz CW/SSB)
Operating normally. Very busy with lots of QSOs heard over
north America and Europe.

RS-15
(Uplink 145.858-145.898MHz CW/SSB, Downlink 29.354-29.394MHz CW/SSB)
Be aware that RS-15 has battery charging problems. When the satellite is
in the dark it's dead.

[ANS thanks Bob Johnson, W7LRD, for this report.]
(Hint: If SSB doesn't work for you, try CW. CW is very easy
to hear on the downlink!)

KO-23
(Uplink 145.85, 145.9MHz FM, Downlink 435.175MHz FM,
9600 Baud FSK.)
KO-23 Frequency, for the best downlink efficiency, seems to be
approximately 2KHz low. The satellite operation, excluding this minor
anomaly, is performing well.

.
.
.KO-25:
(Uplink 145.87MHz FM, Downlink 436.5MHz FM,
9600 Baud FSK.)
KO-25 Normal operation
KO-25 returned to full service on 1/7/97. Operating Normally..

[ANS thanks Jim Weisenberger, AA7KC, for his reports on
KO-25 and KO-23.]

AO-27:
(Uplink 145.85MHz FM, Downlink 436.8MHz FM)
Jan-06-97 11:26 UTC) It is working normally in its orbits on Europe.
It being listened to by stations in Germany, France, Spain, Canary Islands
(EA8), etc.

[ANS thanks Miguel A. Menendez, EA1BCU, for this report.]

As of NOV 2, the AO-27 schedule is as follows:
TEPR 4 = 16 = 8 Minutes in Length
TEPR 5 = 52 = 18 Minutes in Length

TX-3 is on Mid Power during TEPR 5.

This will have the TX turn on 8 Minutes after the satellite
enters the sun for a duration of 18 Minutes. This is a "back to US
Latitudes"operation.

N4USI, AO-27's current Command Station sends his thanks all for
their messages about the satellite turning on later than expected. He
reports he's deliberately letting the "turn on" time drift later
(for about 4-5 Minutes) so stations in the southern latitudes can also
have a chance to work AO-27. Every few months he will be letting the
turn on time drift like this to give more stations a chance to make
contacts thru the satellite.

[ANS thanks Michael, N4USI , AO-27 Control-op, for this
update.]

AO-10:
(Uplink 435.030-435.18MHz CW/LSB, Downlink 145.975-145.825MHz CW/USB)
Operating normally. Stacey E. (Chuck) Mills, W4SM, reports that
Ken Ernandes is attempting to obtain updated Keps, however the satellite is

apparently in an inopportune orbit to accomplish this. It has been
suggested that amateurs may be able to do better, at least for the next few
months by various ranging experiments of their own.. There have been
various discussion on AMSAT-BB on this. However, in the meantime, AO-10's
orbit doesn't change very fast. Parameters are now off by a bit,
especially at perigee. W4SM calculated the blon/blat, -125/5, about one
year ago and is waiting to see if predictions for this year hold up.

Below is a 14-day update on the AO-10 Keps from the NASA OIG RAID RBBS.
AO-10
1 14129U 83058B 96299.11613815 -.00000305 00000-0 10000-3 0 4631
2 14129 25.8792 182.5891 6052907 60.2572 346.3435 2.05882271 72548
[ANS thanks Ken Ernandes, N2WWD, for these keps.]
.A lot of activity was noted this weekend when the sat was over
America. The bird was still workable up to phase 60. Still a bit of
FM-ing when operating in CW

[ANS thanks Stefano Badessi, PA3FWP, for this report.]

BID: $ANS-021.02

AMSAT-OSCAR-16 (PACSAT)
(Uplink 145.9, 145.92, 145.94, 145.86MHz FM, Downlink 437.0513MHz SSB,
1200 Baud PSK.)
It is working normally in its orbits on Europe.

Example of a lit orbit. (Jan-05-97 12:36:03 UTC)
The batteries load (About Tot.Bat/V = 10.865 Volts)
The RC/PSK TX-OUT= 0.633 - 0.704 Wtts.

Example of a nocturnal orbit. (Jan-05-97 23:57:05 UTC)
The batteries load (About Tot.Bat/V = 10.433 Volts)
The Transponder RC/PSK TX-OUT= 0.760 Watts..

[ANS thanks Miguel A. Menendez, EA1BCU, for this report.]

FO-20
(Uplink 145.9-146.0MHz CW/LSB, Downlink 435.8-435.9MHz CW/USB)
Strong downlink signal and very busy with activity.

OSCAR-11
(Downlink 145.825MHz. FM, 1200 Baud PSK)
During the past month (18 December - 14 January) good, steady signals
have been received from OSCAR-11 on 145.826 MHz.

[ANS thanks Clive Wallis, G3CWV, for this information.]

IO-26 (ITAMSAT):
(Uplink 145.875, 145.9, 145.925, 145.95MHz FM, Downlink 435.822MHz SSB,
1200 Baud PSK.)
Operating normally. TLM values are carried on AMSAT-BB.

[ANS thanks Daniele Piercarlo, IK2XRO, ITMSAT Command Station for this
report.]

DO-17(DOVE)
(Downlink 145.825MHz FM, 1200 Baud AFSK.)
Jim White reports that DOVE had timed out on December second.
DOVE's software was then uploaded again to correct the
time out problem. Signals from Dove are once again being
received.

[ANS thanks Jim White, WD0E, and Sergio Adrian Gorgone,
LW7DXF, for this information.]

LUSAT-OSCAR-19
(Uplink 145.84, 145.86, 145.88, 145.9MHz FM, Downlink 437.1528MHz SSB,
1200 Baud PSK AX.25.)
It is working excellently in its orbits on Europe.

Example of a lit orbit. (Jan-05-97 12:00:44 UTC)
The batteries in good state (Tot. Bat/V = 11.08 Volts)
The RC/PSK TX-OUT= 1.004 - 1.079 Wtts.
.
[ANS thanks Miguel A. Menendez, EA1BCU, for this report.]
.
WEBERSAT (WO-18)
(Downlink 437.104MHz SSB, 1200 Baud PSK AX.25.)
WeberSat (WO-18) is operational transmitting telemetry, and Week 4 WOD
CH#: 2F 30 35 36 3B 40. The new attic code has been loaded and a test
picture taken. There will be more to follow in the coming weeks as

testing of the software continues.

[ANS thanks Tommy Davis, IK3WVJ, for this report.]

I'm looking for the program " LOWE Air-Master" to decode ACARS
Any information about building a decoder ar also welcome.

Thx

William

Thanks for the comments, Don. I haven't ventured into EME yet, but
it looks like 'gain is everything' when designing a station.

I'm looking for a relatively inexpensive entry into EME (if such
a thing can be done), and the antenna system looked like it could
be a place to trim costs if a decent 4 antenna array could be
constructed. Since I don't have the real estate for the usual
13+ element Yagi antennas, I'm looking into shorter-boomed
alternatives. A 6-to-8 element X-Q looks like a reasonable way
to get equivalent gain (16dBd+ per antenna) with a boom shorter
than the longest dimension of my house :-)

If spacing between adjacent element sides is 1/2 wavelength,
then the 4-bay X-Q array is only 1-1/2 wavelengths high and
wide, as opposed to 1 wavelength width and height in a 4-bay
array or regular quads. Sure, it takes about twice as much
wire to get about 3dB of gain, but it seems cheaper to go that
route rather than doubling the number of antennas in the array.

Scott

Greetings all! I managed to connect to JAS-2 (FO-29) this evening.
This satellite is currently operating in the digital mode, 9600 baud
AFSK. It operates like a terrestrial-based BBS system, with a few
differences from the standard commands. I have included here a copy of
the help file with the commands for those who are interested. The
uplink in this mode is 145.870 and the downlink is at 435.910. The BBS
callsign is 8J1JCS. If you would like more info on this bird, check
out: http://www.jarl.or.jp/jarl/jas-2/ejasmenu.htm

There is available on this site a schedule for the various modes that
this satellite supports.

My buffer copy:

I have for sale (again - prior buyer backed out) a PK-900 with factory
9600 baud modem. WOrks all HF modes plus VHF packet at 1200 baud or
9600 baud. Works well with all 9600 baud satellites and with WISP.

Cost over $500.00 - sell for $350.00 + shipping

Who would help me ?

I'm intrested in everything about ACARS
I have found a schematic to build a ACARS interface. I can't test the interface because i don't have the program to decode them.

Who would like to send me decoder software via email ? (something like LOWE)

I'ts above my budget to buy a LOWE interface with the software, if i could test my interface i could affort it.

So to all spotters, radio amateurs... who send me software to decode ACARS (maybe there is schareware to decode them ?)

If you have any other suggestions to help me and it's about the ACAR system, be free to email them.

THANKS VERY MUCH !!!!

345. Satellite Rig TS790A

Newsgroup: rec.radio.amateur.space
Date: 1997-01-27 00:00:00 UTC
From: "William F. Erhardt" <erhardt@mt.net>
Message-ID: <01bc0ca5$dbd46c00$5e427fce@default>
Source record: 20149

I am planning on getting into satellites and have heard that the TS790 from Kenwood does not work well on digital modes because the downlink cannot be doppler shifted. Is anyone using a TS790 att for digital modes and what modifications (if any) are necessary for digital. I would be using a PK-232 with 9600/1200 baud PSK modem. I am not sure if I should go with the 790 or invest in a FT736r Yeasu. So if you are using a TS790A and have any ideas suggestion etc it would sure help me make a decission before my birthday in July (the big 50) and I want to get a satellite setup. You only turn 50 once so it will be a nice birthday present. Bill (KA7YAO)

project to
date there is no shareware out there that handles ACARS. In addition, I
am told there are some (rather illegal) pirated copies of some of the
commercial software floating around...I am sorry to have to say
that...73s Mike (co-listowner ACARS listserver)

Every day emergency landing times are radioed to the crew. Cosmonauts
may be upset with each other or the ground, but eventually they must
communicate to survive. Every week or so they get to talk to
friends and family, I doubt anyone would pass up on that after
months in orbit. So your story seems far from reality.

348. NORAD Two-Line Orbital Element Sets (TLE936)

Newsgroup: rec.radio.amateur.space
Date: 1997-01-27 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <5cjcoi$cd1@blackbird.afit.af.mil>
Source record: 20152

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

349. Mir 440 Repeater Active

Newsgroup: rec.radio.amateur.space
Date: 1997-01-27 00:00:00 UTC
From: "William F. Erhardt" <erhardt@mt.net>
Message-ID: <01bc0ca6$14914360$5e427fce@default>
Source record: 20153

From KA7YAO Bill - the 440 repeater aboard Mir was heard here in Montana late last night 437.950 down 435.750 uplink with CTCSS 141.3. Caller was from Seattle, WA

350. Re: FS: AEA PK-900 with 9600 modem

Newsgroup: rec.radio.amateur.space
Date: 1997-01-27 00:00:00 UTC
From: rubenc@iglou.com
Message-ID: <E4oxvG.4AE@iglou.com>
Source record: 20154
Cross-posted to: rec.radio.swap,rec.radio.amateur.space,rec.radio.amateur.digital.misc

Well, it WAS sold, but the guy today backed out. If you are interested
contact me email at kb8bwe@amsat.org.

Charlie KB8BWE

351. Re: X-Q antennas for EME?

This is true. Reduction of your side and back lobes to the minimum so as to concentrate forward as much of your radiated power as you can is essential. I'm just breaking into this field myself and doing so on a cheap shoestring-budget,(I'm still looking for a cheap deal on a 2M all-mode to use for EME).

I plan to use cubical-quads. I've resigned myself to using either a 21 to 30 element aluminum-boom cubical-quad for the job or a pair of 12 to 16 element quads on a cross-boom. We,(I and a friend of mine who designed a 12 Element on an aluminum boom that works great), are working on a design now. A large amount of real-estate is not needed, since what you will be tracking is the moon above, not the horizon, so what one needs is overhead air-space more than lateral acreage.

Remember, the closer the moon appears to the Earth's horizon, the further
away it is from you and the higher the degree the extra atmosphere may
refract and/or duct your beam path, so it becomes much too impractical to
try to do EME on any budget at more than 60 degrees from plumb,(straight
up). Even more than 45 deg. from plumb would probably be pretty tough
without running alot more power. As it is, you need at least 150W PEP
to make a reasonable contact. CQ VHF had a good article on this.

I am looking for sources for used all mode satellite equipment for 2 meters
and 440.I would also like info on transverters that I could use with my
ts-430s that do not cost an arm and a leg.
Yours truly:
Richard D. Vincent

It is *not true* that a high angle above the horizon is needed for
EME. In fact, the lowest power stations do much better when the
Moon is on the horizon. That's because of *ground reflection gain*.
That can give almost 3 db of gain to your signal, equivalent to
doubling the size of your array, for essentially free.

There are a number of stations using fixed arrays aimed at the horizon
to do EME. This is much cheaper than a steerable array, and takes advantage
of ground gain. It does limit the times when you can work EME of course.
There is a caveat. You do need an unobstructed horizon to use this technique.

If you are trying to do EME from a small urban backyard, first of all good
luck, you'll need it. But the main consideration you'll have is control of
sidelobes to minimize the terrestrial crud your antenna will pick up from
your neighbor's consumer electronics. You may need high rabbit wire fences
around your antenna setup to act as shields against this. In a tight urban
setting, you'll do better to forget 2m or 70cm. Concentrate on the higher
bands where you can use a dish, and fence the dish to avoid interference
pickup. The greater path loss of microwave will be more than offset by
the higher gain of the dish, and the much better controlled sidelobes.

Gary

From: tgeyer@rain.org
Message-ID: <5cm7o5$n29$1@news.rain.org>
Source record: 20163

I'm interested in putting together a hamsat station. I've read a few articles and still have some questions. Any help would be greatly appreciated.

1) If I'm only interested in working packet with the satellites, do I need an all-mode (SSB, CW, etc) radio? Will any FM 2m/70cm radio do as long as I have enough power aperture to send/receive the signal?

2) Since the digital modes of the satellites vary (AFSK, FSK, PSK, etc.) and the packet speeds, do I need a separate TNC or modem for each satellite?

3) Is a rotator mandatory? If so, can one get by with only az rotation (supposedly cheaper) than as/el rotation?

4) I would like to test the system by sending myself e-mail. Can I send e-mail into the internet? If not the internet, are there unique commands that I need to know to send to my local packet BBS?

Thanks!

Tom

By combining the benefits of the World Wide Web and E-mail, you can use the internet to set up satellite schedules to contact hams all over the world.

DX stations will also find that by establishing prearranged schedules, they can avoid the pile-up mania that makes working the states anything but enjoyable.
Using the same procedure one would use to work the Space Shuttle, you can now (thanks to the World Wide Web) work DX and stateside stations in an orderly and productive way.

Visit http://www.sarrio.com and estabish your own cybersched

The only action we can take in a free society is to NOT access the newsgroup... We could post messages of agitation also, but what would that accomplish?

Source record: 20166

Hello there. I am Jim Haas, KG9IF, QSL/Contest/Awards Manager for the Husky Amateur Radio Club, W8YY, which is the amateur radio club of Michigan Technological University in Houghton, MI. Every year over a festival known up here as Winter Carnival, where everyone takes a couple of days off to enjoy the snow (we get a lot of that up here), we run a special event station. This year's station runs from 1100Z on 30 January 1997 (6:00 AM Eastern) to 1100Z on 1 February 1997.

"So Jim," you ask, "what do I get for working this station?" Well, if you work our station, just send us a self-addressed, stamped envelope suitable for holding a certificate and we will send you just that--a really nice certificate that says you worked W8YY over Winter Carnival.

Below is the frequency list, which is a general guideline and not a promise of where we will be. I can guarantee one thing--if you look around, we will be there. We may not be on, for example, 14.325 exactly, but we'll be on 20 somewhere. We may also do some HF digital modes (we still need a few connectors for that) and some satellite work as well. If there is enough interest among the station ops/control ops, we will work some CW as well.

If you have any questions, comments, or criticisms, just drop me a line at jdhaas@mtu.edu. We look forward to hearing you on the air.

73 de Jim Haas KG9IF

Band Mode Frequency
17 M USB 18.130.0 MHz

20 M USB 14.325.0 MHz
CW (maybe, if
there is 14.130.0 MHz
interest)

30 M CW (if there 10.125.0 MHz
is interest)

40 M LSB 7.262.5 MHz

75/ LSB 3.972.0 MHz
80 M

160 M LSB 1.932.0 MHz

363. Re: Newbie questions regarding satcom

Newsgroup: rec.radio.amateur.space

From: Casey McCullough <askey@erols.com>
Message-ID: <32EF7198.3AC2@erols.com>
Source record: 20167

Tom,

You should check out www.amsat.org site. It has lots of info re sat ops.

To answer a few of your questions though, to operate packet through the sats you will pretty much need an all-mode radio. While only some of the sats require USB/LSB to operate, the all-mode radios give you the fine tuning ability required to properly follow the doppler shift during a pass.

The 1200 baud sats (AO-16 and LO-19 for example) require ssb receive and a special modem. The 9K6 baud sats also require a special modem. About the only sat that you can work packet through with a normal tnc is or was (I've not done sats in a couple years so not current with exactly what's up right now) the Japanese satellite JAS-20 (?) .

You don't really need a rotator to get started and it's probably a good idea to wait to see if you are going to like the mode before you invest in that kind of hardware. You should get some type of beam at least for the rx side. You don't need much though. As an example: I operated from my apt balcony while in Denmark using a cut down x-polarized beam of only three elements in each plane. I made a little stand and would aim the beam to about the middle portion of a pass I wanted to work. This would usually give me pretty good signal levels for about 80 % of the pass. Simple, cheap and it worked.

Paccomm is a good source for sat modems for both the 1200 and 9K6 sats. WWW.paccomm.com is their web site I believe.

Have fun.

Regards

If you have a packet station send a BLN message to the APRS stations stating
the time of the pass and ask if they can turn there TX off during the pass.

Most of the people I know will turn the APRS transmitters off for the 10 - 15
minutes of the pass so you can make a contact, and may join in trying to make
a contact.

n=20
> >now.
>=20
> What is the gain and the boom length you are aiming at?

At least 30 dB foward gain on a stacked pair of 12 to 16 element quads=20
each from 17.5 to 27 feet,(533cm to 762cm), long.

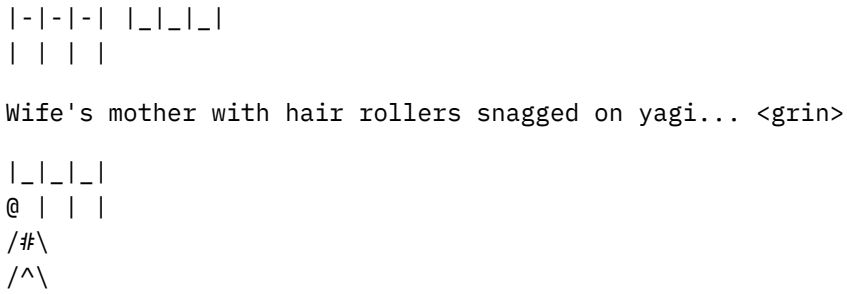
> Personally I am sure that all other EME=B4ers are using Yagi
> arrays because they are the most efficient way to go
> (space and material wise)

Not so at all. With the same length & the same number of logarithmically=20
spaced elements a vertically polarized quad has upto 50% more gain than a=
=20
vertically polarized yagi and while the vertical yagi's elements will=20
stick out about 50cm above and 50cm below the boom, the vertical quad's=20
elements only stand out about 25cm above and 25cm below the boom,(when=20

made for the 2M band).

Vertically Polerized:

Quad Yagi



Wife's mother with hair rollers snagged on yagi... <grin>

366. Re: Amateur Satellites

SB SAT @ AMSAT $ANS-026.01
NEXT SAREX FLIGHT INFO

HR AMSAT NEWS SERVICE BULLETIN 026.01 FROM AMSAT HQ
SILVER SPRING, MD, JANUARY 26, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-026.01

The STS-83's launch date has been adjusted. STS-83's the
next scheduled SAREX flight. Here's some preliminary information.

An article with background information is being planned for the March-April
issue of the "AMSAT Journal"

STS-83 - Microgravity Science Laboratory-1 (MSL-1)

Launch: April 3, 1997 2:19 p.m. EST
2 hr 30 min. launch window, 296 km. 28.5 degree inclination

Hams: Jim Halsell KC5RNI, Janice Voss KC5BTK, Don Thomas KC5FVF

Configuration: SAREX Configuration B (battery operated voice) - special
note - packet will only be performed if there is enough extra power
available. This will probably not occur until later in the flight.

Frequencies: Voice: downlink 145.55 MHz.
uplinks: 144.91, 144.93, 144.95, 144.97, and 144.99 Mhz.

Duration: 15 days, 17 hours

SB SAT @ AMSAT $ANS-026.02
GENEVA ELEMENTARY SCHOOL

HR AMSAT NEWS SERVICE BULLETIN 026.02 FROM AMSAT HQ
SILVER SPRING, MD, JANUARY 26, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-026.02
```

Geneva, Florida - On January 9th astronaut John Blaha, KC5TZQ, talked to students at Geneva Elementary School in Geneva, Florida. The contact took place just three days before the launch of the shuttle Atlantis on the STS-81 mission, Blaha's ride home.

During a near-perfect pass Blaha took the opportunity to answer questions from fifth grade students about life in space and aboard the Russian space station Mir. The students were originally introduced to ham radio by their teacher Glenda Loth, KE4BEZ, when they were in the second grade and ecstatic about their opportunity to talk to an astronaut in space. Many of the students were born in 1986 - the same year Mir's core module was launched.

Nine students got to ask Blaha questions about life aboard Mir. During the contact the students got an additional surprise - Russian Mir 22 commander Valeri Korzun came on the radio to send his greetings to the students - in flawless English. The students couldn't ask Korzun questions, due to current amateur radio regulations, but were still thrilled to hear his voice.

Geneva Elementary is located in Central Florida, approximately an hour's drive from the Kennedy Space Center. Many of the students went to KSC to watch the launch of STS-81 a couple of days later, carrying John Blaha's replacement Jerry Linenger.

The MIREX (MIR Radio Experiment) contact was supported by the Lake Monroe Amateur Radio Society (LMARS) , John Rothert, KC4IYO and Joe Singer, N4IPV a team which had supported previous Shuttle Amateur Radio Experiment (SAREX) contacts on the STS-37 mission with Lyman High School, STS-45 with a group of central Florida schools, and STS-65 with South Seminole Middle School. Hams participating in the contact include Fred N4NVW, Hal KK1B, Bob W2BZY, Joe N4IPV, John KC4IYO and many others. LMARS and the team plans to continue supporting Central Florida schools for future SAREX and MIREX contacts.

The students, teachers, and hams would especially like to thank AMSAT school mentor Will Marchant, KC6ROL, MIREX Educational coordinator Miles Mann, WF1F, and the other members of the MIREX and SAREX team for their assistance which made the contact possible. Of course much credit has to go to Rosalie White, WA1STO of ARRL. The school would also like to thank Philip Chien, KC4YER for his support and hand-outs he brought for the kids and AES for the use of a 160 watt Amp.

Geneva was one of nine schools in the United States and South Africa to take part in the program. This contact, and others in the U.S. were made possible because of the "third party" agreement concluded between the U.S. Government and Russian officials, which was in force through the duration of Blaha's stay on MIR.

[ANS thanks John Rothert, KC4IYO, for this news item.]

BID: $ANS-026.05

FO-29
Voice/CW
(Uplink 145.9-146.0MHz CW/LSB, Downlink 435.8-435.9MHz CW/USB)
Digital
(Uplink 145.85, 145.87, 145.910 MHz FM, Downlink 435.910 MHz FM 9600
baud BPSK)
FO-29 is in digital mode at the current time.

[ANS thanks, Kazu Sakamoto, JJ1WTK for this update.]

MIR:
(New frequencies implemented 1 January 1997:
Uplink 145.2 MHz FM

Downlink 145.8MHz FM)
Note, the above split is used for both packet and voice operation.

SAFEX, MIR 70cm Repeater
(Uplink 435.750MHz FM, Downlink 437.950MHz FM,
Subaudible tone 141.3 Hz)
The repeater is back up again and active.

RS-12:
(Uplink 21.21-21.25MHz CW/SSB, Downlink 29.41-29.45MHz or
145.91-145.95Mhz CW/SSB)
The sat is giving extremely good downlink signals on 2 meters. In
this period of poor propagation on 15 m, the T-mode is providing very
easy access to the satellite. Interesting DX activity has been spotted
in Europe with stations in Egypt, Crete, Cameroon, etc.
[ANS thanks Stefano Badessi, PA3FWP, for this report.]

RS-10:
(Uplink 145.865-145.905MHz CW/SSB, Downlink 29.36-29.4MHz CW/SSB)
Operating normally. Very busy with lots of QSOs heard over
north America and Europe.

RS-15
(Uplink 145.858-145.898MHz CW/SSB, Downlink 29.354-29.394MHz CW/SSB)
Be aware that RS-15 has battery charging problems. When the satellite is
in the dark it's dead.

[ANS thanks Bob Johnson, W7LRD, for this report.]
(Hint: If SSB doesn't work for you, try CW. CW is very easy
to hear on the downlink!)

KO-23
(Uplink 145.85, 145.9MHz FM, Downlink 435.175MHz FM,
9600 Baud FSK.)
KO-23's Downlink efficiency is greater than 90% with the downlink frequency
set 2.0 KHz low.

KO-25:
(Uplink 145.87MHz FM, Downlink 436.5MHz FM,
9600 Baud FSK.)
KO-25 Normal operation
KO-25 returned to full service on 1/7/97. Operating Normally..

[ANS thanks Jim Weisenberger, AA7KC, for his reports on
KO-25 and KO-23.]

AO-27:
(Uplink 145.85MHz FM, Downlink 436.8MHz FM)
Jan-06-97 11:26 UTC) It is working normally.

[ANS thanks Miguel A. Menendez, EA1BCU, for this report.]

As of NOV 2, the AO-27 schedule is as follows:
TEPR 4 = 16 = 8 Minutes in Length

TEPR 5 = 52 = 18 Minutes in Length

TX-3 is on Mid Power during TEPR 5.

This will have the TX turn on 8 Minutes after the satellite
enters the sun for a duration of 18 Minutes. This is a "back to US
Latitudes"operation.

N4USI, AO-27's current Command Station sends his thanks all for
their messages about the satellite turning on later than expected. He
reports he's deliberately letting the "turn on" time drift later
(for about 4-5 Minutes) so stations in the southern latitudes can also
have a chance to work AO-27. Every few months he will be letting the
turn on time drift like this to give more stations a chance to make
contacts thru the satellite.

[ANS thanks Michael, N4USI , AO-27 Control-op, for this
update.]

AO-10:
(Uplink 435.030-435.18MHz CW/LSB, Downlink 145.975-145.825MHz
CW/USB)
Operational

SILVER SPRING, MD, JANUARY 26, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-026.06

AMSAT-OSCAR-16 (PACSAT)
(Uplink 145.9, 145.92, 145.94, 145.86MHz FM, Downlink 437.0513MHz SSB,
1200 Baud PSK.)
It is working normally.

Example of a lit orbit. (Jan-05-97 12:36:03 UTC)
The batteries load (About Tot.Bat/V = 10.865 Volts)
The RC/PSK TX-OUT= 0.633 - 0.704 Wtts.

Example of a nocturnal orbit. (Jan-05-97 23:57:05 UTC)
The batteries load (About Tot.Bat/V = 10.433 Volts)
The Transponder RC/PSK TX-OUT= 0.760 Watts..

[ANS thanks Miguel A. Menendez, EA1BCU, for this report.]

FO-20
(Uplink 145.9-146.0MHz CW/LSB, Downlink 435.8-435.9MHz CW/USB)
Operating normally. Strong downlink signal.

OSCAR-11
(Downlink 145.825MHz. FM, 1200 Baud PSK)

During the past month (18 December - 14 January) good, steady signals
have been received from OSCAR-11 on 145.826 MHz.

[ANS thanks Clive Wallis, G3CWV, for this information.]

IO-26 (ITAMSAT):
(Uplink 145.875, 145.9, 145.925, 145.95MHz FM, Downlink 435.822MHz SSB,
1200 Baud PSK.)
Operating normally. TLM values are carried on AMSAT-BB.

[ANS thanks Daniele Piercarlo, IK2XRO, ITMSAT Command Station for this
report.]

DO-17(DOVE)
(Downlink 145.825MHz FM, 1200 Baud AFSK.)
Signals from Dove are strong.

LUSAT-OSCAR-19
(Uplink 145.84, 145.86, 145.88, 145.9MHz FM, Downlink 437.1528MHz SSB,
1200 Baud PSK AX.25.)
It is working excellently in its orbits on Europe.

Example of a lit orbit. (Jan-05-97 12:00:44 UTC)
The batteries in good state (Tot. Bat/V = 11.08 Volts)
The RC/PSK TX-OUT= 1.004 - 1.079 Wtts.

[ANS thanks Miguel A. Menendez, EA1BCU, for this report.]

WEBERSAT (WO-18)
(Downlink 437.104MHz SSB, 1200 Baud PSK AX.25.)
Webersat (WO-18) is fully operational broadcasting the following
status message:

22-Jan-97 1:35:30 UTC
Pacsat, DOVE, Webersat, Lusat -- seven years in space
Gathering/Sending Week 1 WOD -- arrays
Sending new pictures and spectra
73,
KB7KCL & IK3WVJ

The "tone" has returned, however at present does not interfere with
reception at this QTH. The command team is monitoring.

[ANS thanks Tommy Davis, IK3WVJ, for this report.]

Well,

Your figures are a *real* break through, and therefore they are worth
somecloser examination. First of all, is it dBd or dBi?
second: How were this figure obtained? all experiments
or simulations I came across so far do *not* show
mor gain per boom length for long quads over yagis.

Quite frankly, the figure is out of this world.
a real "big gun" EME array consists of 48 (fourty eight!)
yagis, each several meters long, in order to achieve 28 or so dBd.

>With the same length & the same number of logarithmically
>spaced elements a vertically polarized quad has upto 50% more gain than a
>vertically polarized yagi

What is 50% more gain? it is 1.7 dB. This just does hardly justify the
effort of using full wave loop elements + supports. Even than, the
figure applies only for short (<10 dBd) antennas. sorry.

I finally talked to Jerry this morning. WOW, was that exciting! First time I ever talked to Mir before. The great thing is is Jerry is carrying with him a couple of momentos, one of which is a Michigan Technological University flag which is where I am attending right now. He was very happy and excited about hearing from us.

Now all I need is to find out how to get a QSL card for the contact? If any of you could supply the info it would be much appreciated!

Thanks in advance.

TTYL,
Mike

Oh no Mr. Bill

whatever...

374. Weird packets from DO-17

Newsgroup: rec.radio.amateur.space
Date: 1997-01-30 00:00:00 UTC
From: mconner@neonramp.com
Message-ID: <32f02ca9.3706518@news.neonramp.com>
Source record: 19978

I've copied over the past 2-3 days frames like this coming from DO-17:

DOVE>MBLCTL [01/30/97 05:06:27]: <UI>:
A
DOVE>MBLCTL [01/30/97 05:06:31]: <UI>:
A
DOVE>MBLCTL [01/30/97 05:06:34]: <UI>:
A
DOVE>MBLCTL [01/30/97 05:06:37]: <UI>:
A

DOVE>MBLCTL [01/30/97 05:06:40]: <UI>:
A

DOVE>MBLCTL [01/30/97 05:08:41]: <UI>:
V:9J EC:9F ST:8805 IL:2F00:0CE9 IV:1800 EL:0D96 AH:0000 WS:33D0

21:0D 2E:89 31:AA 32:AB 0A:9F 0D:B5 10:AA

Most of the frames were like the first five - the last one is the only one that looks anything like telemetry. Is this unusual, or is the satellite transmitting in some other mode?

Hello,

Does anyone know where I can purchase a Rockwell/Collins or Motorola GPS receiver board (not enclosed) like the ones TAPR are selling.
I would like to send one up on my next high altitude balloon flight and I understand these units do not have the altitude restriction most other units have.
Thanks, Doug

>long as I have enough power aperture to send/receive the signal?

If you want to work the 1200 baud PSK birds, you'll need a SSB receiver.
Even with the 9600 baud FSK birds, you need smaller tuning steps than
most FM rigs offer to compensate for doppler. So a multimode is the way
to go.

>2) Since the digital modes of the satellites vary (AFSK, FSK, PSK, etc.)
>and the packet speeds, do I need a separate TNC or modem for each
>satellite?

Yes, unless you use one of the DSP units which can be loaded with the
appropriate DSP code for each modulation type.

>3) Is a rotator mandatory? If so, can one get by with only az rotation
>(supposedly cheaper) than as/el rotation?

No. You can get by with fixed antennas. The old standby crossed dipoles
can be used, or the better Lindenblad or Quadrafilar Helix designs can
be used. These are LEOs, so the signals aren't that weak. You don't need
much antenna gain. Circular polarization is a real plus, however, because
it reduces spin modulation.

A 3 or 4 element yagi with a fixed elevation of 30 degrees can also be
used with reasonable results. That sort of antenna has a main lobe about
60 degrees wide, so you only have to track in azimuth. There'll be a hole
in coverage when the satellite is directly overhead, but the satellite
will spend the majority of the time of a pass at an elevation of 30 degrees
or less, so the fixed elevation design will work for most of the pass.
You'll have more spin modulation, though, unless you use a CP yagi. I'd
suggest not bothering with a yagi unless you need the extra gain for
uplink, IE if you can't generate 30 to 40 watts to an omni antenna.

SB SPACE @ ARL $ARLS003
ARLS003 Permission granted for Linenger to ham it up from Mir

ZCZC AS03
QST de W1AW
Space Bulletin 003 ARLS003
From ARRL Headquarters
Newington, CT January 31, 1997
To all radio amateurs

SB SPACE ARL ARLS003
ARLS003 Permission granted for Linenger to ham it up from Mir

US ham-Astronaut Jerry Linenger, KC5HBR, has been granted permission for general QSOs and scheduled school radio contacts with unlicensed students and a control operator.

Getting permission involved approval by authorities in the US, Russia and Germany. Miles Mann, WF1F, Director of Educational Services for the Mir International Amateur Radio EXperiment (MIREX), and Dave Larsen, N6CO, director of the MIREX board, signed an agreement on behalf of MIREX, while Sergei Samburov, RV3DR, chief of the Cosmonaut Amateur Radio Department, signed for the Mir Amateur Radio EXperiment (MAREX), and Joerg Hahn, DL3LUM, international coordinator, signed for the German Space Amateur Funk EXperiment (SAFEX) group, which provided the ham equipment aboard Mir.

The FCC also has given approval for Linenger (and for Astronaut Colin ''Michael'' Foale, KC5UAC--who will take Linenger's place in May) for general QSOs and third-party traffic with schools, family and friends. Linenger recently arrived on Mir via STS-81.

According to Mann, applications for US school QSOs with cosmonauts are approved by MIREX, based on specific guidelines, before being sent on to Samburov and SAFEX. ''The Mir crews have busy work schedules, but our guidelines allow us to arrange--months in advance--school QSOs during crew off hours,'' he explained. The Cosmonaut Amateur Radio Department gives final approval for all QSOs and reserves the right to cancel at any time. Mir's daily experiments always have first priority over ham radio.

Because Mir crews now include a US astronaut, SAREX and MIREX have begun to work together. Currently the SAREX program has about 80 schools on its waiting list. To get a Mir school QSO application, send a self-addressed, stamped envelope to Educational Activities

Department, ARRL, 225 Main St, Newington CT 06111.

A word on random QSOs with the Mir space station: Mir crews make random voice QSOs only during off hours. Do not ask the crew to schedule QSOs, as they do not have the long-term calendar. The 2-meter Mir frequencies recently were changed: The uplink frequency is 145.200 MHz and the downlink is 145.800 MHz. This change resulted from a recommendation from IARU Region 1 (Europe). Please do not ask the crew about it, as the crew does not set policy on frequencies.

Perhaps someone has mistaken decibels for a linear scale or
made an error extrapolating from the dBA scale where 10 dB
sounds twice as loud. It looks like Ted was talking about
a quad antenna in the 15-20 dBd range for a single bay. He may
have either taken a 15 dBd figure and doubled it for two antennas
(instead of the actual 3 dB increase) or he may have started with
a 20 dBd figure and added 10 dB for doubling the number of antennas
in the array (a la dBA scale.)

>>With the same length & the same number of logarithmically
>>spaced elements a vertically polarized quad has upto 50% more gain than a

>figure applies only for short (<10 dBd) antennas. sorry.

Again, the 50% number may not be power gain. A 2-el quad has about
50% more *decibels* of gain than a 2-el Yagi when you measure it
against an isotropic. Of course, that doesn't translate to an 50%
increase in power gain, nor does it scale linearly to longer booms
with more elements.

At best, I would think that Ted's 2-bay, 12-to-16 element quad
array would be in the 20+ dBd range. Still, not too bad for a
relatively small array.

Hello,
I have an ft-726r fully loaded that I would like to upgrade to a 736 for computer control and 1.2 GHZ capabilities. The 726 has the Sat module, 6m, 430,2m and has be re-aligned by the factory. The unit is physically in mint condition. It also has a tone encoder.
I would like to trade it for an ft-736. I know that the ft-736 are hard to come by and costly evin used these days. Which is why I am offering cash in addition. I would exepect that in just about any case the 736 would be worth the 726 fully loaded + cash.

Thanks

Source record: 19990

I have 32 meg 70 ns parity simms, valued at $150 each.

I am looking for a 726 for trade, in equivilant value to the above simms.

let me know whatcha got at jserocki@wwa.com

>relatively small array.

Hi Scott,

The point is, that there is no reason to believe that with two
multielement quads of 2,5 to 4 wl boom length more gain
should be available than from a pair of yagis with the same boom length.

Congrats by the way! I talked to John on Jan. 4th after 2 years of trying to
make a voice contact with Mir. Persistance pays off!

The 145.800 Downlink and 145.200 Uplink are also the same frequencies for
Mir packet operation. There are two ways to do this. First you can digipeat
through Mir at R0MIR. Second, you can connect to the packet mailbox at R0MIR-1.

> 21:0D 2E:89 31:AA 32:AB 0A:9F 0D:B5 10:AA

On the 01/30/97 0315 UTC pass I copies the following data:

DOVE>MBLCTL/V: <UI>:
V:9J EC:9E ST:0805 IL:2F00:0CE9 IV:1800 EL:0D96 AH:0000 WS:0540
21:0D 2E:84 31:AA 32:A9 0A:9E 0D:B5 10:AA

We here have no idea what this is at all. The second line could be
interpreted as telemetry data but alow of the first line has non hex
values.

Does anyone know? Please help!

Thanks,

> Dnlink 437.925 FM Dnlink 437.975 FM

I have been trying to hear MIR's 70cm FM Voice repeater on the 437.925 frequency for weeks and have had no luck. Then, someone out here stated that the FM Voice repeater can be found on:

Uplink: 435.750
Dwnlnk: 437.950

and I have been hearing it just find on each and every pass since using these new frequencies, so please make note of it!

I just finished assembling the kit.
tested unit worked ok except for lcd, it did not come with kit.
talked to TAPR they are sending it next week.
Problem i am having with unit is it accepts nasa keps but not
amsat keps.
does anyone know what the problem may be?
please let me know.

393. MO-30 status

Please don't digipeat through Mir. As Phil Chien relays in his Mir FAQ:

>The packet system was put aboard Mir solely for the purpose of
>communications to and from the cosmonauts. It should *NOT* be used as a
>packet E-mail box for other hams, for digipeating of any kind, APRS, or any
>other purpose. The U.S. MIREX team allow unproto packet (non APRS) when
>the mailbox is in a timeout loop.

That is not a bug, that is a feature. <grin> Seriously, some time back Sueo took out the ability to read AMSAT formatted keps to make room for other features. Fortunately, most distribution channels send out both formats. Also, there are programs which will convert between the two, though I don't have one handy to send you.

Hi there!

I'm looking for any algorithm that improves the SNR.
Is there anything available? I'm especially interested in
algorithms that gives a improvement in Morse decoding.

If you have something please let me know by sending me a mail.

Thank you ver much,
Uli

400. NORAD Two-Line Orbital Element Sets (TLE939)

Newsgroup: rec.radio.amateur.space
Date: 1997-02-04 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <5d5v5v$eig@blackbird.afit.af.mil>
Source record: 20004

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

401. Re: SNR improvement algorithms

Newsgroup: rec.radio.amateur.space
Date: 1997-02-04 00:00:00 UTC
From: oddjob@cix.compulink.co.uk
Message-ID: <E53qys.F1K@cix.compulink.co.uk>
Source record: 20005

I'm especially interested in algorithms that gives a improvement in winning the lottery, easy by comparison......hi hi

Steve Walters: G7VFY: 0956-544202

402. NORAD Two-Line Orbital Element Set Format

Message-ID: <5d632r$enq@blackbird.afit.af.mil>
Source record: 20006

As a service to the satellite user community, the following description of the NORAD two-line orbital element set format is uploaded to sci.space.news and rec.radio.amateur.space on a monthly basis. The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW,

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system. In addition, element sets (updated daily) and some documentation and software are also available via anonymous ftp from

archive.afit.af.mil (129.92.1.66)

in the directory pub/space.

==========

Data for each satellite consists of three lines in the following format:

```
AAAAAAAAAAAAAAAAAAAAA
1 NNNNNU NNNNNAAA NNNNN.NNNNNNNN +.NNNNNNNN +NNNNN-N +NNNNN-N N NNNNN
2 NNNNN NNN.NNNN NNN.NNNN NNNNNNN NNN.NNNN NNN.NNNN NN.NNNNNNNNNNNNN
```

Line 0 is a twenty-two-character name (this change is being made to be consistent with the name length in the NORAD SATCAT).

Lines 1 and 2 are the standard Two-Line Orbital Element Set Format identical to that used by NORAD and NASA. The format description is:

```
Line 1
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
10-11 International Designator (Last two digits of launch year)
12-14 International Designator (Launch number of the year)
15-17 International Designator (Piece of launch)
19-20 Epoch Year (Last two digits of year)
21-32 Epoch (Julian Day and fractional portion of the day)
34-43 First Time Derivative of the Mean Motion
or Ballistic Coefficient (Depending on ephemeris type)
45-52 Second Time Derivative of Mean Motion (decimal point assumed;
blank if N/A)
54-61 BSTAR drag term if GP4 general perturbation theory was used.
Otherwise, radiation pressure coefficient. (Decimal point assumed)
63-63 Ephemeris type
65-68 Element number
69-69 Check Sum (Modulo 10)
```

(Letters, blanks, periods, plus signs = 0; minus signs = 1)

Line 2
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
09-16 Inclination [Degrees]
18-25 Right Ascension of the Ascending Node [Degrees]
27-33 Eccentricity (decimal point assumed)
35-42 Argument of Perigee [Degrees]
44-51 Mean Anomaly [Degrees]
53-63 Mean Motion [Revs per day]
64-68 Revolution number at epoch [Revs]
69-69 Check Sum (Modulo 10)

All other columns are blank or fixed.

Example:

NOAA 6
1 11416U 86 50.28438588 0.00000140 67960-4 0 5293
2 11416 98.5105 69.3305 0012788 63.2828 296.9658 14.24899292346978

405. Receiver- Kit for Weather Sat.'s

Newsgroup: rec.radio.amateur.space
Date: 1997-02-04 00:00:00 UTC
From: abom@iaehv.nl
Message-ID: <32f7b66c.9988385@news.iaehv.nl>
Source record: 20009

Hallo, weather satellite- fans

Last year I developed a weather satellite receiver for receiving all
polar satellites. The receiver will be connected to the soundblaster
card in the computer. In combination with a shareware file beautiful
pictures can be received.

Because we had such a good results we intend to publish the complete
electronic design inclusive the print- layout on internet.

Some technical details.

* Manual tuning from 136- 139 MHz.
* Kepler compensated
* Squelched Loudspeaker output.
* Non- squelched soundblaster output.
* Signal strength indication.
* Very Sensitiv for weak signals (0.12 uV/ 12dB sinad)

When you are interested in rebuilding the receiver, please mail us.
At sufficient interest it will be possible for us to order
professional print boards and to supply the special components.
Further it will be possible to give technical support during building
the receiver.
When you are interested in building a low cost and a good performance
weather- receiver let us know.

Best regards,

A.Bom

407. MIR pass on 02/05/97 about 00:45 UTC

Newsgroup: rec.radio.amateur.space
Date: 1997-02-05 00:00:00 UTC
From: Mike Cat <foobar@abc.xyz>
Message-ID: <32F8A351.4505@abc.xyz>
Source record: 20011

FOR DIRECT MAIL REPLIES, SEE BELOW.

Hi all,

The MIR pass (of about 82 degrees elevation here in New England) on 02/05/97 at about 00:45 UTC failed to produce any signals on both the 2 meter and 70cm downlink frequencies.

Can anyone else verfy this information as well so I can sleep without thinking I'm going crazy?

I have been successfully listening to MIR on 145.800 on packet and on 437.950 FM Voice for over a week now, except for this pass. Did they turn off the robot and repeater for some specific reason?

Perhaps they were disabled for the state of the union address or because they were using the spare power to watch the breaking news on OJ? Or maybe they knew this pass was a "prime time" pass of 1/3 of the US?

Clueless in New Englad,
Mike Cat

Mike,

I heard them just fine, on voice at about 00:40 EST. In fact, I may
have worked them, though he moved on to another station quite quickly,
so I'm not 100% sure.

The max elevation here in Southern New England was only about 41
degrees, but the signal was pegging my meter (ain't line of sight
wonderful :-)

Good luck for future passes.

There are a wide variety of amateur satellites available for use by radio amateurs. All have some time above the horizon in Europe.
Are you a radio amateur?
Are you interested in digital or analog satellites?
Do you have any experience or equipment for VHF, HF, or UHF activity?
Buzz

Yaesu keeps telling me this radio is nothing but vaporware, as they are unwilling to invest in the design and production of an all new radio until they see that Phase IIID is up, running, and there is a lot of interest in it. Also, there is little incentive to upgrade the venerable FT736 right now since it is still considered the best sat radio on the market. I have encouraged them to do some minor upgrades to the 736, including built-in 9600 bps, and an FSK/PSK modem too. They don't seem too interested yet.

I don't have it available here, but the 1997 ARRL Handbook has dowlink and uplink requirements for all P3D analog and digital transponders. March, 1997 QST will have an article that might have more info on the microwave transponders.

418. DOVE data from 03:16 UTC on 02/06/97

Newsgroup: rec.radio.amateur.space
Date: 1997-02-06 00:00:00 UTC
From: Mike Cat <NotValid@email.address>
Message-ID: <32F9E5EA.2596@email.address>
Source record: 20022

Dove is still in it's MBLCTL mode. Thanks to Stacey Mills:

> The MBLCTL stands for "microsat boot loader control".
> Radiation damage has altered the 555 reset/watchdog timers on the
> microsats and the new software works around this.

Here is the data I gathered on 02/06/97 at 03:16 UTC.

DOVE>MBLCTL/V: <UI>:
V:9J EC:CD ST:8805 IL:2F00:0CE9 IV:1800 EL:0D96 AH:0000 WS:0170
21:0D 2E:83 31:AB 32:AC 0A:9E 0D:B6 10:AB

Also, transmissions from dove are few and far between. During the last
two high elevation passes over me (which lasted over 10 minutes), I was
only able to receive ONE DO-17 transmission.

Does anyone know how often DOVE transmits when it's in this MBLCTL mode?

Thanks!
Mike Cat

419. R0MIR data for 02/06/97 00:10 UTC

Newsgroup: rec.radio.amateur.space
Date: 1997-02-06 00:00:00 UTC
From: Mike Cat <NotValid@email.address>
Message-ID: <32F9EBFB.2A4E@email.address>
Source record: 20023

Just for fun I am posting all the packet data that I got from MIR's pass in my neck of the woods (New Hampshire, USA) from 02/06/97 at approximately 00:10 UTC. If you know any of these amateurs or are one yourself, it's a neat way to get a followup QSL via a newgroup posting.

420. newbie transmit question

Newsgroup: rec.radio.amateur.space
Date: 1997-02-06 00:00:00 UTC
From: stevem14@aol.com
Message-ID: <19970206163400.LAA07106@ladder01.news.aol.com>
Source record: 20024

I just got a 726 yaseu and am puting a sat station together and am thinking about a single 144 &432 mhz j-pole (with 2 feeds) like is in the ARRL handbook for an antenna for the l.e.o. sats. My dumb question for the day is this:
Won't I be transmitting directly into my reciever and smoke the thing when I try crossband full duplex communications?

If you feel like it, resopnd to murdock@graceland.edu instead of a general post but that will work for me too.

Radio Meteor Observation Bulletin No. 42 February 1997

1. FORWARD SCATTER METEOR OBSERVATIONS

Observer: Maurice De Meyere
Location: Deurle, Belgium (3 37' E, 51 00' N)
Frequency: 66.51 MHz
Transmitter locations (all stations of more than 10 kW):
66.35 MHz, Klaipeda, Lithuania 12 kW, 05h00-22h00
66.41 Siedlce Poland 39 04h57(Sun05h57)-02h00(Sat03h00)
66.47 Viesintos Lithuania 12 05h00-22h00
66.50 Sofia Bulgaria 10 24hrs
66.56 Poznan Poland 56 04h57(Sun05h57)-02h00(Sat03h00)
66.62 Budapest Hungary 100 24hrs
66.68 Valmiera Latvia 20 06h00-22h00
Antenna: crossed Yagi, 4 elements, astronomical azimuth 270 deg (= E),
elev 27 deg
Antenna amplifier: 25 dB max level 90 dBmuV
Receiver: commercial, Progresson 447A, TESLA (Bratislava)
The receiver was calibrated with a Marconi TF2008 signal
generator. Sensitivity: 5 muV (modulation frequency
1000 Hz, frequency sweep 38 kHz) at (S+N)/N = 20 dB

Observing method: automated setup, 150 samples/second, 8 bit resolution.
[Time and details of all individual meteor reflections are stored
on file in the University of Ghent format (Prometeos), and are
available for further analysis. Reduction software for DOS and
Windows available].

January 1997

Raw counts of reflections with a duration of at least 0.027 s
during one hour interval starting at UT:

Notes:
. & hardware trouble
. local time = UT + 1 hour.

Maurice De Meyere

Location: Astronomical Observatory, University of Ghent, Belgium
(3 42' 32" E, 51 01' 25" N)
Antenna (2x): 4 elements horizontal Yagi, pointed East, elevation= 30 degs
Antenna amplifier: 10 dB gain
Frequency: (1)=66.29 MHz (signal) and (2)=65.3 MHz (interference control)
Receiver (2x): modified commercial FM receiver
Data acquisition: 12 bits PC-based A/D convertor, 250 Hz sampling rate
Interference rejection:
dual setup: receiver (1) tuned at distant transmitter, receiver (2)
tuned at empty frequency. Anticoincindence measurement rejects
registration of broadbanded spurious signals (lightnings, computers,
ignition motors, etc).
Further information:
see WWW page (additional info + observational data)
http://allserv.rug.ac.be/~hdejongh/astro/meteor/meteor.html
Data format:
results are shown as total reflection time, expressed as
a percentage. The actual number shows 10 times this value.

When no figure is shown, the equipment was either out of service,
or results could have been affected by interference, sporadic E.

```

. Geminid activity between December 12-14

Pierre De Groote / comments by Chris Steyaert

```
-------------------------------------------------------------------------------
Observer: Werfried Kuneth
Location: Ferndorf, Austria (13 37' E, 46 45' N)
Antenna: 3 element Yagi
Receiver: AR-8000 at 48.2500 MHz, SSB mode, no preamplifier.
Transmitter: 150 kW TV video carrier in Madrid (Spain), distance 1550 km,
southwest.
Observing method: automatic setup using FFTDSP42t software by AF9Y to
record the audio signal. 20 channels of 2 Hz width are used for
meteor identification.
More details see <http://www.net4you.co.at/user/kuneth/info.html>
```

From the saved graphic files, the following duration distribution was computed:

Duration distribution for Jan 1-5, 1997, counts are calculated to full hour

---

+------------------------- 0.5 seconds duration
 +---------------------- 1.0 - 1.5 sec
  +------------------ 2.0 - 3.0 sec
   +-------------- 3.5 - 6 sec
    +---------- 6.5 - 12.5 sec
     +------- 13 - 25.5 sec
      +---- 26 - 49.5 sec
       +- >=50 sec
        +- 'x' means precision degraded
         +-recording duration
+-begin of hour (minutes of good data)

Notes:
. the Quadrantids showed up well only in Jan, 3rd.
. From 02h00 - 04h00 UT a different transmitter is reported.
Precision is therefore lower during that period.
. local time conversion: 1 hours ahead of UT (07h00 UT is 08h00 local)

Werfried Kuneth

Observer: Kimio Maegawa
Transmitter: 50 W Continuous Carrier with FSK ID every 10 minutes
on 53.7500 MHz
Transmitter antenna: 2 element Cross Yagi 4dBi, zenith
Transmitting Location: Sabae city (136 11' E, 35 56' N)
Receiver: IC706 2.4kHz BW USB, sensitivity -150 dBm at 50 ohm
Receiver antenna: 3el Yagi 7 dBi (elev 70 deg, az 150 deg = SE)
height 10 m
Receiving Location: Ohno city (136 53' E, 36 00' N)
Data processing : Receiver output is fed into Sound Board of 486DX2-66 MHz PC
and analyzed by AF9Y's FFTDSP42 software (same as W. Kuneth)
Then stored every 10.5 min automaticaly with GIF format.
Play back GIF files and count echoes manually rejecting
tropo signal or airplane echo by the doppler shift.

1997 Quadrantids hourly echo counts

The frequencies are far enough apart that you won't damage your receiver but you probably will "hear" your tx signal in your receiver unless you use some type of filtering.

I have used a 726 for sat work and feel that you would be much better off and most likely much happier with your results if you use two antennas separated by as much as you can. Mount your tx ant higher than the rx ant.

You're about to have a whole lot of fun. Enjoy.

Regards KF6OQ/OZ2USA/9L1CM/5H3CM/KF6OQ/DU3

Hi, David.

A Radio Shack HTX-202 with the R/S brick amplifier, about 35W, into a
homemade 1/4 wave groundplane antenna up at 20 feet.

Direct line of sight is such a neat thing :-)

428. Cross Band Couplers

Newsgroup: rec.radio.amateur.space
Date: 1997-02-07 00:00:00 UTC
From: Roger Rehr <rrehr@epix.net>
Message-ID: <01bc14ab$43a41080$4442e0c7@regor>
Source record: 20032

Where can I get a couple of cross band couplers so that I can use my single run of hard line for full-duplex 2m/432 communications?

The ARRL antenna manual discusses these devices (page 17-9 in the 17th Edition)
but Not where to get them.

I'm not worried about cost.

Thanks

Roger

If you must use a single antenna, buy a splitter designed to
drive two antennas (450 and 144) from a single radio. Install
it in reverse to drive a single antenna.

Anyone have any experience/info on using a Icom 735
with a transverter? The 735 manual is skimpy on info
on the transverter jack on the rear panel. any hints
or kinks are appreciated....

I would like to homebrew a transverter(s) for 144 and 220.

They're called diplexers. You can get ordinary ones at any major
amateur dealer. Comet sells them, Diamond sells them, as do others,
for use with dual-band mobile installations. They cost about $60.
However, the loss through these ordinary diplexers is likely to offset
any loss savings you might have with the hardline, so using them to
create a low loss system is futile.

But there is hope. Tx-Rx Systems, Sinclair, and other duplexer
manufacturers, can supply you with high quality cavity combiners
which won't have such high losses. Lucky for you that cost is
no object, because these units sell for more than $1,000 each.

By combining the benefits of the World Wide Web and E-mail, you can use the internet to set up satellite schedules to contact hams all over the world.

DX stations will also find that by establishing prearranged schedules, they can avoid the pile-up mania that makes working the states anything but enjoyable.
Using the same procedure one would use to work the Space Shuttle, you can now (thanks to the World Wide Web) work DX and stateside stations in an orderly and productive way.

Visit http://www.sarrio.com and estabish your own cybersched

Source record: 20048

Howdy from Helena, Montana (KA7YAO) Bill with the following question: Do I adjust my xmit (uplink) on this repeater to stay on the downlink 437.950 or do I leave my xmit (uplink) on 435.750 and adjust my downlink. Tonight I heard folks up 10 then 5 etc as bird approached then passed down 5 then 10 and it appears they were leaving xmit freq set and adjusting downlink to hear the other station. I tried making a contact by going up 10 and also shifting my xmit up 10 to match and I know thats wrong so no contacts were made of course. I have my IC2350 setup as 437.950 - 2200 offset and CTCSS of 141.3 so xmit on 435.750. I am new at this so any help would be appreciated. Bill

445. Re: ICOM 735 & Transverters?

Newsgroup: rec.radio.amateur.space
Date: 1997-02-10 00:00:00 UTC
From: Erik Skovgaard <Erik_Skovgaard@bc.sympatico.ca>
Message-ID: <01bc1714$94db0e20$2ec56cce@default>
Source record: 20049

Joe,

I tried it using a Hamtronics transmitting and receiving converter. The transverter output from the 735 is very low (10 mW, I think) - too low for most transverters. The separate RX antenna input to the 735 is a real blessing for transverters, however.

I found the sensitivity a little on the poor side on 10 meters. However, a good preamp on the transverter fixed that (and that is the right way to do it, too). Overall, the 735 is a very good rig to use on the back end of a transverter, but you may have to boost the transmit signal. I used the main antenna output (instead of the transverter output) and an attenuator. I did manage to blast 100 into the transverter a few times, of course :-)

The output at the transverter jack is much lower than 10 mW. 10 mW is
what most available transverters want to see, but the 735 puts out less
than a milliwatt. The reason for this is that the transverter output is
tapped off the pre-pre-driver stage instead of the pre-driver stage so
the transverter port can be used transceive.

As long as you're going to use the separate Rx input anyway, you can fix
that. The cable going from the pre-driver on the main board to the driver
on the PA board is the right level to drive most transverters. Just unplug
this cable from the main board, and plug the transverter jack cable in its
place. Now you'll have about 10 mW at the transverter jack on the back, but
you can't *transceive* on this port anymore. (That's Ok, you're using the
separate Rx port to receive.)

If you add another jack to the back, you can route the cable going to
the PA to it. Then to restore the radio to normal operation, all you
need to do is put a jumper on the outside on the back between this new
jack and the transverter out jack. Simple. This way you can never over-
drive a transverter, and you'll have the right level for most modern
transceiver designs.

I don't know what Icom was thinking when they set the radio up this way.
Perhaps they had plans, which never materialized, to offer transverters
for it which required the lower drive level. Anyway, after this mod,
it is a wonderful radio to use with transverters.

Gary

For sale: Custom built 4CX1000 amplifier. Consists of separate RF deck, control panel, and PS. RF deck uses motor driven vacuum variable cap and roller inductor, with potentiometer feedback for LED indicators on control panel. Will cover 10-160 meters, has input pad to prevent overdriving, 15 watts in will produce approx 1500 out at 3000 VDC. Control panel has large meters for plate voltage and current, bias voltage and grid current. Power supply components included but not built. Blower included and mounts remote of RF deck. Could mount entire system in rack, or use RF deck remote of operating position.

Prefer trade for legal limit desktop amplifier or ??? Make cash offer.

Great idea Gary, but it defaces the rig. No help when bowwowing Joe's rig on field day. An easy fix is to make up a small buffer amplifier using a single transistor, e.g. BF981 or a modamp, operating in a linear mode (most important) to boost the low power to about 20mW. Then add a filter on the output to ensure a clean drive.

A level setting pot is a good idea as well so you can adjust the power input to the transverter, and while you are at it, a relay and two sockets to switch the receive line and the signal to the transverter pin on the acc1 connector.

Now you can leave the rig wired for HF and have the transverter connected. Change bands at the flick of a switch and protect the transverter from 100W of HF.

Has anyone heard of a 435 MHz circular polarized patch antenna? Are patch antenna CP? I'm looking for a manufacturer, plans, used, or any information for the design of a CP patch antenna.

My design needs are circular polarized and VERY SMALL!! Am I overlooking any designs?

Please email me with any information.
Thanks & 73,

tz

>of 141.3 so xmit on 435.750. I am new at this so any help would be
>appreciated. Bill
>

This is a regular repeater, not a linear transponder, so you need to
move *both* transmit and receive frequencies to compensate for doppler.
(I understand the repeater has AFC in its receiver, so it can compensate
for uplink doppler to some degree, but why make it work harder than it
has to? Try to stay in the center of the range.)

456. AZ/EL rotors.. Which one is bset?

Newsgroup: rec.radio.amateur.space
Date: 1997-02-11 00:00:00 UTC
From: allen@mailhub.scf.lmsc.lockheed.com
Message-ID: <5dqjqt$i53$1@lscruz.scf.lmms.lmco.com>
Source record: 20060

I am thinking about buying an AZ/EL rotor. I beleive that there is more
than one model. Which one is liked the best?

thanks, Allen WB6RWU

459. NORAD Two-Line Orbital Element Set: Space Shuttle (97042.00000000)

Newsgroup: rec.radio.amateur.space
Date: 1997-02-12 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <5dr91j$1hk@blackbird.afit.af.mil>
Source record: 20063

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system. As a service to the satellite user community, the most current elements for the current shuttle mission are provided below.

Element sets (also updated daily), shuttle elements, and some documentation and software are also available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

>
>73 Mike

Well, you can certainly do that, Mike. But 1) I don't consider adding
a jack to the back panel "defacing" the rig, and 2) if I'm borrowing
the rig it only takes a couple of minutes to remove the cover and move
the transverter cable over to the pre-driver output jack, and another
couple minutes to put it back when I'm done. No *permanent* changes are
required. This is the quickest, easiest, and cheapest way to allow the
IC735 to work with 10mW input transverters.

I'd use an external box only if it were imperative that neither radio
nor transverter be touched internally. In that case, your idea is an
excellent one. I'd likely use a MAR-4 as the gain element. Note that
you *could* tuck one of these *inside* the 735 or *inside* the transverter
as alternatives. That wouldn't "deface" either piece of equipment, and
eliminates another external box and another level of TR sequencing.

If you're using transverters with a transceive IF port, the best place
to put the extra amp is inside the transverter on the Tx side *after*
the transverter's internal TR. If you're using a transverter with a
split IF, many are this way, then putting the amp in the radio to bring
it up to "standard" transverter levels might make more sense. Especially
if you want to mast mount the transverter, then having the hotter signal
at the other end of the coax becomes very attractive.

There's nothing *wrong* with your approach, it is just that I'm reluctant to build yet another box when I don't have to. That's just more stuff you have to lug along, and another set of cables to add to the tangle, and possibly cause problems, and another level of TR switching to sequence.

Gary

462. NORAD Two-Line Orbital Element Set: Space Shuttle (97042.00000000)

Newsgroup: rec.radio.amateur.space
Date: 1997-02-12 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <5dtift$55u@blackbird.afit.af.mil>
Source record: 20066

The most current orbital elements from the NORAD two-line element sets are
carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are
also available on this system. As a service to the satellite user community,
the most current elements for the current shuttle mission are provided below.

Element sets (also updated daily), shuttle elements, and some documentation
and software are also available via anonymous ftp from archive.afit.af.mil
(129.92.1.66) in the directory pub/space.

463. R0MIR on SAFEX

Newsgroup: rec.radio.amateur.space
Date: 1997-02-12 00:00:00 UTC
From: BJ Arts <bjarts@uslink.net>
Message-ID: <01bc193f$61a57a40$22bc92ce@bjarts.uslink.net>
Source record: 20067

I just worked Val. R0MIR on the MIR 70cm repeater, SAFEX. He come on during the middle of the pass over North America and worked three US stations. From what R0MIR was talking about, it sounds like he'll be headed home soon. It was fun to her him on the SAFEX side and a big pile started after his first contact. The uplink frequency was 435.765 and the downlink was 437.942 Mhz. as this was near the end of the pass for me I had a big doppler shift to compensate for on both the up and downlink frequencies. I hope other get a chance to work Val, as he sure wanted to do some talking to fellow amateurs on the ground. 73 and Good hunting.

464. Which 10m Pre-amp????

Newsgroup: rec.radio.amateur.space
Date: 1997-02-12 00:00:00 UTC
From: Mark Fossum <n0nsv@amsat.org>
Message-ID: <33025782.2DD@amsat.org>
Source record: 20068

I'm seeking advice on Pre-amps for 10m Satellite Operations. Currently, I'm using a Gap Challenger for my 10m downlink antenna on Mode-A. (RS-10 & RS-15) I like to find a good low noise Pre-amp to improve things a bit.

Any suggestions?

Mark Fossum - N0NSV

Mark,

I use the Hamtronics unit that cost about $29. It is *not* a GAsFET, but
you probably won't notice the slightly higher noise on 10 meters. Both
RS-12 and RS-15 give very good signals here with just a sloping dipole.

Source record: 19824

Hello,

I have tried to use the MIR UHF repeater several times with next to no luck. I hear it fine, although with some deep fades, but it does not seem to hear me very well. I use 35 watts and an Icom 821H. The antenna is a 6-element yagi, horizontal polarization, pointing 45 degrees up from horizontal.

What kind of antennas do people use on the repeater?

73 de VE7MDL ....Erik.

479. GIF, JPEG scanning service. FREE OFFER! A picture is worth a thousand words! (onmEpM)

Newsgroup: rec.radio.amateur.space
Date: 1997-02-14 00:00:00 UTC
From: scanning@XXX1324noreply.com
Message-ID: <eo7wTHhG8GA.219@uptgmsnb01>
Source record: 19833

Why don't you print or save this info in case you need it in the future?

Hello Friends,
It's time to take full advantage of the online medium by having your photographs scanned today! Once your pictures are scanned into one of three formats (GIF, JPEG, or BMP) you can do many exciting things with them.

-You'll easily be able to attach them to emails and send them to people your chatting with online. No more having to try and explain what you look like!

-You can also use your photos in all kinds of fun projects: build web pages; design your own greeting cards; make personalized stationary,desktops, and screen savers- the list is endless!

- Scan pictures of yourself, your pet, your vacation, or whatever you choose!

Cyber Services will scan ANY photograph, drawing, magazine clipping, or other artwork to an image file, and email or US mail it (on disk) back to you within 24 hours of its receipt. (You must be able to receive file attachments to get your file(s) via email. Check with your ISP if your not sure.) PRIVACY & CONFIDENTIALITY ARE ASSURED. You'll also receive helpful technical tips on everything from renaming your file to saving time when sending it to people via email.

We scan all our images in 16.7 million colors for best quality. For just $1 extra we can enlarge or crop your photo, blur out a body part, or ad text (such as your name or email address).

Best of all, as a FREE GIFT to you (limited time only), IF YOU CHOOSE TO, we'll reserve you a FREE PAGE (or pages) in our "Internet Date-Site" (Now under construction!!!). This web site contains pages classified by local area and sexual preference. There's also a erotic image gallery (must be legal age to enter), and a "special interests" section. That's right, you can have your own page on the internet for just $4! (Note: You're responsible for answering your dog's email!) Your free page(s) will include any or all of the following: Your scanned photo(s) (You pick which ones- You can have some, none or all of your photos posted on your page), your email address with an icon visitors can click to send you mail, and a brief profile about you. We'll remove or modify your page, at your request, at anytime! When the "Date-Site" opens for business, you'll receive an email notifying you of the address of your personal web page. You can give the address to people and they can view it from any internet
connection! There are millions and millions of people on the internet.It's

time you start meeting them! (This service won't be free for long so act now!)

If you have any questions regarding our services, please call us at (541)744-5718.

Ordering Information:

Price: $4 for first scan, $3 for each additional scan
Extras: $1 each to add personalized information. (name/email)
$1 each to have image modified (enlarged, body part blurred, etc..)
$2 to have image files mailed to you on a floppy disk (IBM or MAC).
$1 credit card processing fee (Visa/Mastercard users only)

If you would like your photographs returned to you please include a self addressed stamped envelope. Otherwise they will be destroyed.

Order Form (PRINT OUT or COPY CLEARLY):

Name (optional):

Email Address or Screen name (PRINT CLEARLY! You must be able to receive file attachments. Otherwise include $2 for shipment on floppy disk.):

Address (optional unless having shipped on disk):

Phone number (optional):

File type (GIF, JPEG, or BMP. GIF recommended):

Extras (Exact personalized info you want printed on scan):

Disk Format (if having mailed on a floppy): IBM or MAC

Payment method (Cash, Check, Money Order, or Visa/Mastercard):
Please make checks payable to Cyber Services.

Credit Card # (credit card orders only):

Expiration date:
Don't forget to include the $1 processing fee if your paying with your credit card.

Do you want the FREE GIFT? Yes or No (circle one)
-Web Page(s) in our "Internet Date-Site" (under construction). You can have a page for yourself, a page for your car, and a page for your cat! Be sure to indicate where you want your page (F4M, M4F, F4F, F4M, or Couples) and which of the following info you want on your page (print clearly): State and Town, email address, year or birth, physical description, quote/message (under 30 words please). Please indicate which photos you want on your page (if any) if you don't want them all to be displayed. If your want your nude/erotic photos displayed in our erotic image gallery YOU MUST include a signed statement that your are over 18 years of age or older and give us

consent to display your nude/erotic photo, and be sure to tell us if your want it displayed with your info or anonymously.

Mail the above information and photos with payment to:

Cyber Services
2852 Willamette St. #131
Department 1
Eugene, OR 97405

Orders sent overnight will be given first priority.

Erotic/Nude photo's will be accepted providing everyone in them is of legal age.

Questions? Call (541)744-5718

Please help our small business grow by sharing this info with someone you think could use it.

Thank You!

(onmEpM)

I use a Mirage in shack model preamp for RS-15 and extreme eastern passes of RS-10 when I am trying to work the UK. Real nice, GAsFET (proper spelling?) and rugged..(steel case). Has a nice remote jack that I have connected to the footswitch. Key the transmitter, the preamp shuts off..etc.. I would say that it does bring in A lot of noise as well, but that is a coax and a house full of RF! Without it, England is impossible for me....

Hi Houston -- there is a great packet tutorial by Larry Kenney, WB9LOZ
at URL:

http://itg-pc1.acns.nwu.edu/~odenbach/classes/c96/packetradio.txt
Also check the packet links at URL:
http://pw2.netcom.com/~ac6v/pagew.html#D

Hope this helps

Does anyone know of a program (w/ or w/o source code) for Linux that can
decode uo-22 data? If so, please e-mail me and tell me where I can get
my hands on it. Thanks

Be aware that these file contain obvious errors. Look at table 2: the E and E3 units seem to be electronically identical, yet their frequency coverages differ.
Mmmm.... Wonder what else is wrong!

490. Mir news

Newsgroup: rec.radio.amateur.space
Date: 1997-02-15 00:00:00 UTC

MIRNEWS.344 10 FEBRUARY 1997

Launch Soyuz-TM25: This ship with on board the reliefcrew for the 23d Main Expedition (M.E.) to MIR and the German astronaut Reinhold Ewald, who will in cooperation with the Russians execute the MIR-97 program, has been launched from Baykonur on 10.02.1997 at 14hrs 09mins 30secs UTC. The callsign of the crew is Sirius (so Sirius-1, 2 and 3). The commander is Tsibliyev, now making his 2d flight in space and the board-engineer is Lazutkin who did not fly thusfar.

Progress-M33: There must always be a free docking port for the new ship. Before the flight of the Soyuz-TM24 the Russians undocked the Pr-M as soon as they were sure that the systems of the new ship were functioning normally, so at abt 1 day after launch. Some orbits after the undocking the freighter entered the earth's atmosphere and burnt up. To begin with the Pr-M32 the Russians changed this routine and the Pr-M32 flew autonomously until 18.08.96, redocked to the complex and left MIR and burnt up in the atmosphere on 20.11.1996. The Progress-M33 separated from MIR's aft (Kvant-1 +X axis) on 6.02.1997 at 12hrs 13mins 56secs and will make an autonomous flight until the beginning of March '97.

Soyuz-TM24: This ship had been docked at the forward dockingport (transitionsection - P.Kh.O. -X axis). This port has been chosen for the docking of the S-TM25. In the future the Russians refrain from the use of the approach system Kurs in Soyuz-TM and Progress-M ships. This decision has been taken due to problems about the delivery of that systeem between RKK Energiya and the factory NPO Kharton in Kharkov, Ukraine.
On 7.02.1997 at 16hrs 28mins 01secs the S-TM24 separated from MIR and manned by Korzun, Kaleri and Linenger made an autonomous flight concluded by the docking of that ship at the aft (Kvant-1 +X axis) dockingport that day at 16hrs 51mins 27secs.
Undoubtedly this has been quite an experience for Jerry Linenger who came by Atlantis and will return with the shuttle.

Dockings of S-TM ships will be executed manually by the commander and those of unmanned Pr-M freighters will be done by the crew on board MIR by the use of the Remote Control system TORU.

ETA (expected time of arrival) of Soyuz-TM25 at MIR:

S-TM25 has to dock to the MIR's forward (P.Kh.O. -X axis) docking port on 12.02.1997 at abt. 1550UTC. This is 3 minutes

after the first pass for both objects over Western Europe. During this pass (1541-1547UTC) we can expect communications about the approach on 121.750 mc FM-N and the 143.625 mc.

493. Sound Blaster = easy WEFAX FAX SSTV RTTY

Newsgroup: rec.radio.amateur.space
Date: 1997-02-15 00:00:00 UTC
From: "Brian E. Cauchi" <gcauchi@keyworld.net>
Message-ID: <01bc1b89$25fdf0c0$0101a8c0@gcauchi.keyworld.net>
Source record: 19847
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc, rec.radio.amateur.space

Hello... Brian here!

If you have a RADIO and a SOUND BLASTER (or compatible card) you already have all the hardware necessary to receive WEFAX, FAX, SSTV and RTTY.

You can also transmit monochrome FAX and SSTV, with the current version of my FTV software.

*** Put the power of your 80386, 80486 or Pentium processor to real use ***

The external "decoder" units that are used by conventional users are modelled inside this software. This makes it easy to get started, inexpensive and rids you of the inevitable tangle of wires and boxes of decoders.

Absolutely no external hardware, other than a simple audio lead, is required by FTV. The current version decodes:

WEFAX (from weather satellites, e.g. 137-138 MHz)
HF-FAX (from terrestrial stations)
SSTV (from radio amateurs, e.g. 14.230 MHz)
Baudot (press, naval, weather etc)

Here is a run down of the more interesting features:

(1) It keeps the demodulated signal in memory, so that the signal can be analysed again at a different keying rate or polarity! Garbage can be resampled on the fly, which means that minutes of received signals decoded at the wrong baud rate or keying polarity are recovered, on the fly, while still receiving.

(2) The incoming signal is analysed automatically - standard modes, line rates, baud rates and keying polarity are automatically determined following analysis.

(3) Tuning oscilloscope available at all times, without loss of copy.

(4) Program works in real time.

*** What are you waiting for? Try it now! ***

Take a look at my web site for futher details, from where you can download an evaluation copy, at: http://www.geocities.com/SiliconValley/2504

Registration promotes the further development of this software and entitles the user to future upgrades paying only for delivery expenses, if any.

Finally, just in case some of you have trouble accessing my web site, here is my postal address (if you want a reply, send a self-addressed label and IRC's to cover expenses):
Brian E. Cauchi,
Gawhra, Domenico Cachia Street, Birkirkara BKR06, MALTA.

What can I say? Try it, and may you have as much fun as I am having...
73's from Brian.

494. What is NORAD 24706?

Newsgroup: rec.radio.amateur.space
Date: 1997-02-16 00:00:00 UTC
From: bd703@scn.org
Message-ID: <E5o9nt.FK7@scn.org>
Source record: 19848

Although this object probably isn't amateur related, is there someone
who can tell me what NORAD # 24706 is?

It is also refered to as 1996-073C.

A friend of mine noticed the keps for it but we can't find out what satellite
it is.

Thanks in advance

Kerwin

Look carefully at Table 2: E receives 144-146 and 430-440, while E3
receives 67-180 and 400-512 MHz.

It appears there is no way to get the 800 MHz band on "K" (U.S./Canada)
models, which should make Newt Gingrich happy.

Page 16 appears to be missing from the JPG images.

I checked my pages and indeed we don't have page 16
What i don't understand is that all pages i have are just like i
received from Kenwood and they are one part.
No way they could "forget" page 16, i think it's a mistake in numbering
the pages sins page 15 and 17 are one.

I ask them for it and let you know.

William

Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc, rec.radio.amateur.space,rec.radio.amateur.dx,rec.radio.scanner

I would like to use my 79A as the remote to my 733A.

I followed all the directions in the Appnotes. I power on while holding
PTT and MR and nothing happens.

Any suggestions would be great.

Thanks, Mark, N1XYY

501. Support Little Leo instructions

Newsgroup: rec.radio.amateur.space

Anyone wishing to register opposition for the ARRL/AMSAT submission should send a brief e-mail message to wrc97@fcc.gov. The Subject line should say "Reference No. ISP-96-005 IWG-2A." A simple statement to this effect, "I oppose the ARRL/AMSAT opposition to the NVNG MSS flexible allocation proposal," will be included in the public record and will help to drive home the point that there is broad-based approval to well conceived 2 metere sharing proposals. It ought to be clear to the FCC the public good is poorly served by allowing hams exclusive use of these valuable
frequencies.

Please note! The proposals the League opposes are not FCC proposals, nor are
they endorsed by any other branch of the government. They are industry proposals. The League's objective is to falsely demonstrate there is broad citizen opposition to the industry proposals.

Additional arguments or evidence also is welcome. Important! Comments should
reach the FCC no later than March 4, 1997!

I'm a professional educator of electronics and computer service technology. I've only had my ham ticket for about a month now, but I'm learning a lot about this fascinating field. In fact, it was a few of my students that got my interest up in ham radio, and I've done what I can to promote it to my other students. I view it as a national resource... and also realize that it is fast becoming an endangered resource!

Reading these newsgroups has helped me have a better understanding of not only the technical aspects of the field, but the kind of people that are involved in it. The vast majority of the participants in these groups are extremely helpful, and willing to do anything they can to promote amateur radio... proud followers of The Amateur Code by W9EEA!

I've also learned that there are a small number of participants that prefer to use the newsgroups for their own pleasure... attempting to degrade the service and those participating in it. No doubt these types have other interesting diversions when their computers and rigs are down, such poking sticks into hornet nests to observe the reaction. I've been around long enough to know that this type of person will continue to provoke a response until they are ignored long enough. Even

the hornets learn this lesson!

Perhaps the formation of a new newsgroup, such as rec.radio.amateur.whiners-cryers is in order, so that these types can have their own little playground and stop spamming the groups that are helpful!

Also... please don't think anyone identifying himself as a "teacher" speaks for everyone in that profession. Hopefully you too have been around long enough to realize that there will always be a few dog-eared cards in the deck. Fortunately, they are easy enough to identify.

Obviously, I'm opening a path for flames by posting my opinion here... and from the childish battles I've read on these newsgroups, I certainly expect a few. I'll just ignore them. Then the flamethrowers will find another nest to poke.

My two cents...

John - N3YPR

Come on, Burt....
Let me see ---- public service events (bike races, marathons, sporting events, Special Olympics, APRS at the real Olympics in Atlanta, etc), search and rescue communications (whether on foot, in vehicles, or in the air), coordination of communications for emergency management agencies (from city/municipal to FEMA), and what about hurricanes, tornadoes, wildfires.....

Is that enough or do you need me to waste more bandwidth trying to convince you of something the rest of us acknowledge.

Doesn't say very much about your example, does it Burt? Are you
telling us that you are such a poor teacher and such a poor example,
that you can not guide your students to the more interesting,
productive areas of ham? Please don't say there are none, you and the
rest of us know that that is an outright lie. Of course, if you truly
believe there are NO redeeming features in amature radio, then that
would prove that you are not a good teacher, or at the very least,
lack the knowledge and drive to be a "good" teacher. All that said,
I'm not stating that you are not a good teacher, like I said, it could
simply be that you are spouting bilge and nonsense for some strange
reason known only to yourself.

>It is a vast wasteland.

If your above example shows your ability to motivate our youth, could
it be possible that the same could be said of your classroom?

>Hams can not ignore.

Why should hams ignore? I, personally feel, that is one of the
problems in ham radio. We ignore TOO much. You yourself have
mentioned this. Please make up your mind on how you feel it should
be.

>No you do not. If you find ham radio interesting you will love watching
>water freeze.

You have NO room to talk, Burt. YOU are guilty of being exactly what
you accuse others of being. You are still the UTH (remember that
one), you just use internet instead of ham. I find this interaction
interesting, but it is definitely more boring than talking to someone

live, on air. If this is you idea of interesting, then maybe you'd find watching water thaw fascinating. A "typical ham" (your definition) is still a "typical ham" whether it be via radio or internet>

I've had fun with the thread that's come since posting this rig, but I'm starting to get a little tired of Nutless Idiots such as yourself, littering up the newsgroups and destroying other people's ads. It's okay though, because I have a growing list of boneheads I'm going to be watching very closely for. I'm actually quite anxious to see YOUR next attempt to sell an item. I assure you that there will be more attention drawn to the outlandish prices instead of the equipment you've posted.

Have a fine evening,

Mike

Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc, rec.radio.amateur.space

Re what was previously posted regarding the ARRL/AMSAT position
on this issue. I would recommend that individuals do their own
research
prior to sending the suggested response. The poster points out that:

"Please note! The proposals the League opposes are not FCC proposals,
nor are they endorsed by any other branch of the government. They are
industry proposals. The League's objective is to falsely demonstrate
there is broad citizen opposition to the industry proposals."

I would ask myself - when did industry ever propose to GIVE any new
frequencies to the Amateur community? As far as "broad citizen
opposition to the industry proposal", the Amateur Community will
generally have to be its own best advocate. We know the value of
the 2 Meter band during times of stress and emergency, the general
public is sometimes quick to forget the acts of service.

The poster also states that your "simple statement" will:

".....be included in the public record and will help to drive
home the point that there is broad-based approval to well conceived
2 Meter sharing proposals."

He appears to be asking you the amateur community to use the same
"simple statement" to support the view favored by industry. Somehow
the logic escapes me - when has the Amateur not lost out in the end
to every "well conceived sharing proposal"?

The poster then wraps up with the following:

"It ought to be clear to the FCC the public good is poorly served
by allowing hams exclusive use of these valuable frequencies."

Pay close attention to that phrase "valuable frequencies"! Obviously
they are of financial value to someone or industry would never have
come up with this proposal. This is $$$$$ speaking - NOT service to
the community, not public relations, and certainly not the voice of
a broad based citizenry.

Anyone wishing to register SUPPORT for the ARRL/AMSAT submission
should send a brief e-mail message to wrc97@fcc.gov. The Subject line
should say "Reference No. ISP-96-005 IWG-2A." A simple statement to
this
effect:

"I fully support the ARRL/AMSAT opposition to the NVNG MSS flexible allocation proposal." This might be followed by a BRIEF example of a situation wherein the Amateur Service and the Two Meter band was of value to the community in times of stress/emergency.

As noted by the posting, your view -- supporting OR dissenting -- will be included in the public record and will help to demonstrate that there is support for your side of the question. Please do your own research, and don't get caught up in the rush towards "broad-based approval" of either side!

You know the value of the Two Meter Band and you know there are other groups who would like to market a few more Garage Door Openers or some other commercial (read $$$$$ making) devices. Once the frequencies
are gone, there may not be any others to share.

Comments must arrive at the FCC prior to 04 MAR 97

Please note, I apologize for the length of this posting. I was concerned
that the language in the original note ("oppose" the "opposition") might
be construed in the wrong way and do a dis-service to the Amateur Service.

Wrong here. If the League alerts its members to a threat to the amateur band allocations, and the membership (and Amateur community at large) agrees, it is by no means a "false" demonstration. It demonstrates that there is, in fact, STRONG, BROAD opposition to the sharing of these band segments with other sevices, as NO method of sharing has been proposed that would not severely interefere with existing services here, especially to the amateur satellite service. I encourage all those amateurs (who have not already done so) to file their comments OPPOSING the sharing of these band segments with other services.

Thanks.

The "false" comes into the picture when the league acts "concerned".
Fact is we have lost, and will loose spectrum, since the idiots in
Newington have promoted this as a "hobby" and dropped the "service". Add
incentive licensing, contests and NTS and you have a good case to get
rid of the whole lot of 500,000! ARRL did not get concerned about
220-222, now the whole band plus 2m and 440? The ARRL stacks the deck,
no doubt, but it (ham radio) is over. I am 34 and have been in radio 24
years. I said 15 years ago, hams were becoming "bookmarks" for
commercial interest. I was right. I work in the communications business
and read industry periodicals. Just wait till you find out we will also
be loosing space on 40/75 meters! This is coming real soon.
Burt, I do not know how you could put "which president do you trust
more?"
on your page. This piece of crap, in lieu of a leader, sells everything
to highest bidder. That is why you support the idea of "sharing" and
"getting along" since Clinton has made it so. For those who read this:
RCR a commercial trade newspaper has reported the Clinton regime plans
to make $50 BILLION off of additional spectrum auctions the next 2

years. They also admit that wireless company officials went to "coffees" at the white house. Now you ask why does Burt support all this? Because by Clinton selling our spectrum, he will get more federal money to use at work along with a raise for nothing! Computers, the internet in every classroom, more education spending..get it? More utopian spending at Burt's place of work.

I do agree 90% of hams are boring and unskilled, but to get to the point, sharing the 2m band will lead to exclusive allocation and then what do you do? I will become an outlaw: guns, scanners, ham radios, cigarettes, etc.

I will see you on 144.410 no matter who "owns" it!
Chris

Hale-Bopp Becoming An Impressive Sight

At 05:00 PST this morning I went outside to take a look at comet Hale-Bopp. My observing location isn't the best; I'm only about 20 km from the outskirts of the San Fernando Valley and the light pollution is so bad that I can barely see the brightest patches of the Milky Way.

In spite of this, I immediately spotted the comet with the naked eye. It was about 15 degrees above the east-northeast horizon and looked like a fuzzy star.

It was almost as bright as the stars in the Big Dipper. I estimate the comet's brightness to be about magnitude +2.6.

Through my 10X50 binoculars I saw a small, bright nucleus. The tail was about 4/10ths of a degree long. Both the nucleus and tail were white with no detectable color.

Owens Lake Astronomy Expedition in Two Weeks

Two weeks from today I plan to take a trip to the eastern side of Owens Lake to assess the light pollution there. This site was chosen because it's twice as far from Los Angeles and Bakersfield than Mount Pinos and should be much darker.

My current employment situation may prevent me from driving to my preferred Hale-Bopp observing sites of central Nevada or Escalante, Utah. Thus, a closer alternative is needed and east Owens Lake may fit the bill.

I'm looking for others who may want to drive up to the site with me or meet me there. I'd be leaving the Thousand Oaks area at about 08:00 and arrive in the vicinity of the site at about 13:30. After a few hours of photographing satellites and deep sky observing, I'd pack up and head for home (I might consider getting a hotel room and staying until Sunday morning).

The roundezvous point will be the intersection of state routes 136 and 190 on the east side of the lake bed. Plan on being there at 15:30.

If you're interested in joining me, contact me at my e-mail address.

Next Vandenberg Launch in Six Weeks

The next scheduled launch from Vandenberg AFB is a refurbished Titan II (not a Titan IV, a Titan II) carrying a DMSP weather satellite. The launch time is unknown. Details regarding this event will be posted on my web page as they become available.

Minuteman III Launch Fiasco

Two weeks ago, several of us stayed up late for two consecutive nights to watch a Minuteman III launch from Vandenberg AFB. On the first night, we didn't see anything at the scheduled 00:01 PST launch time. A fellow ham radio operator made a telephone call and found out that there was a problem and the attempt had been scrubbed.

The next night was a repeat of the first. The 00:01 launch time came and went with nothing happening. The same fellow made a phone call and learned that there was the same problem as the night before (a malfunctioning radar in Hawaii) and the Minuteman III probably wasn't going to be launched.

At 00:15, my friend Bob (KE6YLD) and I left our observing site and drove home. I took a shower, removed my contact lenses, and settled into bed. At 00:42 I saw a bright glow through the bedroom window. The Air Force did launch the missile .... but they were 41 minutes late and we had no easy way to learn of the delay. Needless to say, I was not happy the next day.

To prevent this sort of thing from happening again, I leased a cellular telephone. If I go to Vandenberg AFB to cover a launch in person, I can call desinated ham radio operators in Ventura, Los Angeles, and Santa Barbara counties. They in turn can pass the countdown status over various 2-meter ham radio repeaters.

If I decide to watch a launch from Ventura County, I'll be able to call a news media liason at the base for the countdown status. I'll then call the designated hams who will pass the news along as described above.

By the way, I'm looking for ham operators to volunteer to help me with this. Before you volunteer, be advised that 60% of the launches occur at midnight or 01:00. Many go at even worse times like 03:30. Also, you'll need to be able to easily get into at least one high-coverage 2-meter repeater (i.e. Broadcast Peak in Santa Barbara, Sulphur Mountain, Mount Disappointment, Palos Verdes, or Catalina Island).

Try 437.950 as well. Sometimes the Repeater is switched on and qso- Mode is off
Dont forget the doppler shift of +/- 10 kHz.

Sean,

MIR seems to be in the SAFEX repeater mode lately. The downlink frequency is 437.950. Due to the low orbit, you will find that the doppler shift is rather large, so you may have to tune up 10 KHz on the approach and down that much when it moves away from you.

The two-tone busts you heard on 145.8 was perhaps packet? That's what I heard on that frequency the last few nights except tonight. In fact, I did not heard MIR at all tonight.

>Look carefully at Table 2: E receives 144-146 and 430-440, while E3
>receives 67-180 and 400-512 MHz.
Which is *exactly* my point: the receive ranges differ, yet the diode-matrix (D302-D308, labeled 'Destination diode' in table 2) is exactly the same. These diodes tell the unit how to behave. Now if the E and E3 units have the same diodes, how can they behave differently?

Note that I feel the documents contain a wealth of information,
I was just hoping to keep anybody from opening up his/her handheld and moving diodes, only to find out there is an error in this table 2. The TH79 is to precious for that.

> It appears there is no way to get the 800 MHz band on "K" (U.S./Canada)
> models, which should make Newt Gingrich happy.
Still, I see TH79A's advertised WITH 800 MHz in various newsgroups. As I understand it the older units can receive 800, but the newer ones can not. I somewhere read in an article that you can see this from the serial number:
===If your serial number is 603XXX or higher, that is all you will get. The
===TH-79A that I have posted is 602XXX
I cannot find the original article though- you'll have to search the net for it.
There may be a NOSPAM. in front of my E-mail address.
It is there to fool machines, not people.

Hello Kerwin,

I can't tell you, from my present information, exactly what the 96073C object is, but I can say it was launched by a SOYUZ-U vehicle on Dec 24, 1996 at 1350UTC. The name of the primary object was/is 'Bion No. 11' and the launch took place from Plesetsk pad LC43. The primary object was a 'Life sciences' experiment with International Designation 96073A. I may be wrong, but I think this was a capsule containing two monkeys that was later retrieved after re-entry.

The 'C' designation would normally refer to an upper stage or other part of the launch vehicle, or perhaps to debris of the launch.

Cheerio, Alan.

Sean: I monitored several MIR passes on 17 Feb from WASH DC area. I
listened on 2 meters. They were a ctive on both packet and FM voice.
I heard strong FM voice sigs at 2016Z. I was using an old Yaesu
memorizer and a little verticle dipole. Good luck! Bill N2CQR

A friend of mine told me about a trancsceiver, ICOM IC-970H, which can also be used for the S-Band. I have not found such a transceiver at the homepage of ICOM.

Does anybody know something about it?

Hakan

I would say 30% of all hams are active and 10% of those are involved in contests. Those 10% walk all over the rest in their piggish ways of hogging the band.

You are right, I should not use the word "all" as you suggested.

And what percentage of hams take part in the above?
And of those that do, ham communication uses 400000 words when 10 will
do. Hams are horribly inefficent voice communicators.

Is that what it thinks it tells you. When I demonstrate ham radio I make no editorial comment. I offer extre credit for it. If I leave the radio on the comment I get is, "you do not talk to those losers do you." Ham radio speaks for itself. Not even Jesus Christ could convince our youth to get on the air with the current crop of old white fat farts.

If you want to talk direct to the student that has no use for ham radio his address is on my WWW site. See him, he is the #1 student in the school with a perfect SAT verbal score. And he knows the score on ham radio.

A trip to my home page reveals there are many good files and programs for amateur radio operators that want to use Mac computers.

<http://www.mv.com/ipusers/wd1v/>

* Ham Radio Test Simulators - where you can go from Novice to Extra Class practicing the actual tests right on your Mac! Check out the info on the new NO CODE license or scramble your neurons and learn Morse on the Mac too!

* Macnet Roster - a virtual "Who's Who" HyperCard stack with more than 780 entries giving the names, addresses, phone numbers, of radio operators all over the world that are using Macs. Check out their projects and their passions and put a design on your Mac Radio future when you see what neat things are being done!

* Mac Ham Radio Software Listing - as the name implies, its "The List" of the latest - much of it with FTP links so what you see is what you can get with just a click. Many of the programs listed on right there for FTPing.

* Ham Radio.FAQ - compiled on a Mac with a lot of links to great Mac FTP sites for radio, electronic engineering, and similar data.

Ah, yes, and if you look at the figure on page 6, the "E" has a jumper
at W301, while the "E3" does not, And in Table 4, the TX-RX Unit number
for the "E" is X57-4402-71, while the "E3" us X57-4402-73. Do the X57
indicators imply the configuration of jumpers and/or diodes, or
different firmware? Things may be more comples than just moving diodes
and cutting wires. It's confusing (probably on purpose).

Thank you William for the post-

These are indeed correct.
The newer US versions of the radio have a different processor that
will not allow the extended coverage. No doubt a request-demand from
our wonderful government.

Kent

Announcing NEW
Ham Radio.FAQ

This is the second generation of the original file that was
a regular USENET posting entitled

"rec.radio.amateur.misc Frequently Asked Questions"

The NEW Ham Radio.FAQ is a HyperText document that is on the
WWW and it contains 3 chapters plus hundreds of LINKS to radio
related sites!

1 - Introduction to the Ham Radio.FAQ
2 - Amateur Radio Organizations, Services, and Data Sources
3 - Amateur Radio Advanced and Technical Questions

Please provide a copy of the Ham Radio.FAQ to any new or
soon-to-be Hams that you know or share with them the URL to this
site:

http://www.mv.com/ipusers/wd1v

Send me an EMAIL <or packet with your Email address> if you want the
FAQ text file sent to you as an attached <120 K> file with the words
"HAM FAQ" on the subject line.

Send me a formatted disk with SASE disk mailer if you want the
FAQ text file sent to you on disk. PC or Mac are fine.

73,

Hakan,

The 970 is no longer made. It supported several different bands by module, but I think the highest was mode L. I could be wrong. You may be able to find one used. By all reports it was a good rig, but too expensive and specialized. Icom is now making the simpler and cheaper 821, which seems to be a good general satellite rig.

Simple: He just refers them to the following newsgroup:
news://alt.radio.pirate
Just because this guy has NEVER been involved in SkyWarn, RACES, ARES, or built his own repeater network from the ground up, he thinks these things should be left to the broadcasters, and commercial guys only! He's obviously got the knowledge, and spent some time doing some technical things (he's an extra), but he must now be bored.

Hale-Bopp Becoming An Impressive Sight

At 05:00 PST this morning I went outside to take a look at comet Hale-Bopp. My observing location isn't the best; I'm only about 20 km from the outskirts of the San Fernando Valley and the light pollution is so bad that I can barely see the brightest patches of the Milky Way.

In spite of this, I immediately spotted the comet with the naked eye. It was about 15 degrees above the east-northeast horizon and looked like a fuzzy star.

It was almost as bright as the stars in the Big Dipper. I estimate the comet's brightness to be about magnitude +2.6.

Through my 10X50 binoculars I saw a small, bright nucleus. The tail was about 4/10ths of a degree long. Both the nucleus and tail were white with no detectable color.

Owens Lake Astronomy Expedition in Two Weeks

Two weeks from today I plan to take a trip to the eastern side of Owens Lake to assess the light pollution there. This site was chosen because it's twice as far from Los Angeles and Bakersfield than Mount Pinos and should be much darker.

My current employment situation may prevent me from driving to my preferred Hale-Bopp observing sites of central Nevada or Escalante, Utah. Thus, a closer alternative is needed and east Owens Lake may fit the bill.

I'm looking for others who may want to drive up to the site with me or meet me there. I'd be leaving the Thousand Oaks area at about 08:00 and arrive in the vicinity of the site at about 13:30. After a few hours of photographing satellites and deep sky observing, I'd pack up and head for home (I might consider getting a hotel room and staying until Sunday morning).

The roundezvous point will be the intersection of state routes 136 and 190 on the east side of the lake bed. Plan on being there at 15:30.

If you're interested in joining me, contact me at my e-mail address.

Next Vandenberg Launch in Six Weeks

The next scheduled launch from Vandenberg AFB is a refurbished Titan II (not a Titan IV, a Titan II) carrying a DMSP weather satellite. The launch time is unknown. Details regarding this event will be posted on my web page as they become available.

Minuteman III Launch Fiasco

Two weeks ago, several of us stayed up late for two consecutive nights to watch a Minuteman III launch from Vandenberg AFB. On the first night, we didn't see anything at the scheduled 00:01 PST launch time. A fellow ham radio operator made a telephone call and found out that there was a problem and the attempt had been scrubbed.

The next night was a repeat of the first. The 00:01 launch time came and went with nothing happening. The same fellow made a phone call and learned that there was the same problem as the night before (a malfunctioning radar in Hawaii) and the Minuteman III probably wasn't going to be launched.

At 00:15, my friend Bob (KE6YLD) and I left our observing site and drove home. I took a shower, removed my contact lenses, and settled into bed. At 00:42 I saw a bright glow through the bedroom window. The Air Force did launch the missile .... but they were 41 minutes late and we had no easy way to learn of the delay. Needless to say, I was not happy the next day.

To prevent this sort of thing from happening again, I leased a cellular telephone. If I go to Vandenberg AFB to cover a launch in person, I can call desinated ham radio operators in Ventura, Los Angeles, and Santa Barbara counties. They in turn can pass the countdown status over various 2-meter ham radio repeaters.

If I decide to watch a launch from Ventura County, I'll be able to call a news media liason at the base for the countdown status. I'll then call the designated hams who will pass the news along as described above.

By the way, I'm looking for ham operators to volunteer to help me with this. Before you volunteer, be advised that 60% of the launches occur at midnight or 01:00. Many go at even worse times like 03:30. Also, you'll need to be able to easily get into at least one high-coverage 2-meter repeater (i.e. Broadcast Peak in Santa Barbara, Sulphur Mountain, Mount Disappointment, Palos Verdes, or Catalina Island).

A man went to a guts store to get some guts for dinner. He sees a sign remarking on the quality of guts offered at this particular gut store. So he asks the butcher: "How much for Engineer guts?"
"3 dollars an ounce."
"How much for teacher guts?"
"4 dollars an ounce."
"How much for ham operator guts?"
"100 dollars an ounce."
"Why is ham operator guts so much more?"
"Do you know how many hams you need to kill to get one ounce of guts?

Well you have the ability to laugh at your self and admit a minor error.
Are you sure you are a ham?

Ham radio defined:

There's just so much more in the world to catch their
eye than a bunch of farts who try to maintain their heirarchy in a
pseudo
secret society, refusing with a vengeance to pass the baton, for fear of
the
tiniest little detail of what's theirs being changed. Even if the change
is
necessary and beneficial to the hobby.

> I have seen you post that comment before. It makes absolutely NO
> sense! "If I have the guts"??? I am confused as to your meaning.

Hams are so gutless that none will meet me on the air to discuss my so
called outrageous views. It is not like I can hit them on the air.

> All kidding aside, my first impression is that you actually do have
> some serious problems. Do you so delusional as to believe that you
> could harm me by merely talking to me?

Maybe not you but most hams I could make look damn silly on the air, not
because I am smarter but I have the facts on my side.

I have the "guts" to talk to
> any human being in this world. Would your conversation be so inane
> that I would die of boredom?

Far less than a TYPICAL ham contact.

I had always imagined it would be an
> interesting conversation. Please explain this "guts" idea. I am
> willing to bet I am not the only one with this question.

You are the only one maybe with the guts to ask.

567. IC725 FOR SALE!

Newsgroup: rec.radio.amateur.space
Date: 1997-02-19 00:00:00 UTC
From: Gkenn <glenn@indigo.ie>
Message-ID: <330B909E.16C9@indigo.ie>
Source record: 19876

HF Radio & Accessories for Sale.

ICOM IC-725 ALL BAND HF TRANSCIEVER.
500 kHz - 30 MHz
AM, SSB, CW and FM
26 User Programmable Memories
3 Scan Types
Selectable Tuning Rate
Band stacking register capability
10 dB preamp
20 dB attenuator
100W output

ICOM AH3 HF AUTOMATIC ANTENNA TUNER
Wide tuning range
Automatic digital control tuning
Eight-frequency memory for fast tuning
Weatherproof design
Max 0.3W radiated power
Controlled directly by IC-725

DRAE 24 AMPERE POWER SUPPLY

All items are in mint condition and have the original instruction
manuals.

I am looking for ï¿½800 ono.

For more information email glenn@indigo.ie

Burt,

The part that takes guts is to promote this hobby of ours in a positive
way,
bitching and moaning about how bad things are takes NO GUTS AT ALL and
that's
all I've ever seen from your posts. Nothing positive, no creative ideas
just good
ole belly achin.

Do you have guts Burt?

571. NORAD Two-Line Orbital Element Set: Space Shuttle (97049.33333333)

Newsgroup: rec.radio.amateur.space
Date: 1997-02-19 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <5eg12k$2sv@blackbird.afit.af.mil>
Source record: 19880

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system. As a service to the satellite user community, the most current elements for the current shuttle mission are provided below.

Element sets (also updated daily), shuttle elements, and some documentation and software are also available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

Before this thread get's any further out of hand, I have a couple of
questions:

First of all, this clown is just looking for attention and enjoy's pushing
everyones buttons. He is looking for a response from a large group of
people, and he got it! He's no better than a jammer on your local repeater;
the more you respond to his drivel, the more he enjoy's it. If he is just
ignored, he will eventually go away. Don't give him the satisfaction of a
response, he has shown that he doesn't really care about the issues, he
just like to push your buttons!
Second, he obviously was interested in Amateur Radio at one time, since he
is an Extra Class, and continues to use his call sign in his sig at the end
of every message. I really wonder what his daughter, KA1VBQ thinks about
Amateur Radio? Does he really hate Amateur Radio that much? I don't think
so...His web page has several references, links, etc to Amateur Radio. He
even has some quotes paying homage to CW. Let's see, photo's of him and his
daughter with their call signs prominently displayed, callsign search,
links to Ham Radio info, and obviously very proud to be an Amateur Radio
Operator! At least that's what it looks like from this end!
So Burt, what's the real story? Are you AND your daughter going to give up
your calls? Are you going to continue this rediculous thread? If you feel
such hatred towards the hobby, why don't you show it on your web page? I
look forward to your response and hope you can quit playing this silly game
of yours.

>UTH?

I thought you would remember that one, Ultimate Typical Ham.

>Nothing is more boring than that. But I will be glad to meet you OR
>ANYONE on the air, if you have the guts.

I have seen you post that comment before. It makes absolutely NO
sense! "If I have the guts"??? I am confused as to your meaning.
All kidding aside, my first impression is that you actually do have
some serious problems. Do you so delusional as to believe that you
could harm me by merely talking to me? I have the "guts" to talk to
any human being in this world. Would your conversation be so inane
that I would die of boredom? I had always imagined it would be an
interesting conversation. Please explain this "guts" idea. I am
willing to bet I am not the only one with this question.

Thank you Alan,

may be some times later, when the s-band is used more frequently by
amateur satellites, similar transceivers will be produced again.

And you are one of the ones who gave it to me.
What is it about spineless hams that they think they can tell others
what to do and not do it themselves? Are you German?

> Don't give him the satisfaction of a response

Like you did?

> I really wonder what his daughter, KA1VBQ thinks about
> Amateur Radio?

She says, "it's boring....I do not relate to them in anyway what so
ever."
quoted at 1133 EST. She is a straight A student.

>Does he really hate Amateur Radio that much? I don't think
> so...His web page has several references, links, etc to Amateur Radio.

Have you READ the references, they are hardly positive.

> He even has some quotes paying homage to CW. Let's see, photo's of him and his
> daughter with their call signs prominently displayed, callsign search,
> links to Ham Radio info, and obviously very proud to be an Amateur Radio
> Operator! At least that's what it looks like from this end!

I do pay homage to CW, it is the one mode where hams get to the point.
READ the K1OIK reference page.

> So Burt, what's the real story? Are you AND your daughter going to give up
> your calls?

She wants to give hers up.

Are you going to continue this rediculous thread? If you feel
> such hatred towards the hobby, why don't you show it on your web page?

Look at the WWW page man, it is all there.

Nicely spotted Bob!
As the green wire is in series with D308, cutting the wire equals removing
D308. That leaves us with an identical diode-matrix for the E2 and the E3,
which have different transmit ranges.....

In reality it was tested that the difference between E2 and E3 is in diode
D304: with D304 it is an E2, without it an E3 (which is equal to E9).

Sigh.... Am I suffering from dyslexia or what is going on here?....

There may be a NOSPAM. in front of my E-mail address.
It is there to fool machines, not people.

There were 1296 Mhz and 2.4GHZ modules for the ICOM970.
The unit was the top of the line HAM Satellite rig.

I think you can get three down converters for the price of
one 2.4 Ghz module

Aris,

As I understand the bird is not on over Europe because of abuse from unlicensed operators. It functions regularly over North and Central America during daylight hours.

As a note to those wishing to use AO-27 over North America. This bird is in constant use during daylight hours. If you don't hear it PLEASE DON'T CALL CQ you will just be QRMing the bird. If you don't hear it the problem is yours the bird is active, count on it. Thanks

73 Jerry KK5YY

>Because I am public service minded person.

I'm glad you said this Burt. The Boston Marathon will be running
on April 21st. We will need additional volunteers. I will be part
of a group using APRS software to keep track of emergency
vehicles. I believe this is a school holiday, so you should be free.

Since you are a teacher of electronics, you should be able to
throw together a tracker if you want to help even more. Simply
interface a GPS unit supplying an NMEA sentence to a TNC
of your choice. Transmit on 145.79 (you can use that 2M
equipment in your closet) . The Shareware is downloadable
from various web sites.

If you don't have, or can't build, a GPS unit, just keep the
serial interface of the TNC free and we can program it with
a laptop.

Maybe we can even put your moped to work!

Anyway, Thanks for volunteering!
73,

Steve

I have heard races covered by ham radio. CBers do better.
Hams are horribly inefficent blabber mouths but I bet your group in
the Boston area actually does a lot of good.

I don't agree with Burt's position, Bruce, but I haven't seen any engineering study which would indicate that the SS signals of the LEOs would adversely impact amateur operations. Frankly, I think their signals would have negligible impact on most amateur operations, including most amateur satellite operations. There might be some impact on traditional EME operations due to the slightly raised noise floor, but that's a very tiny part of amateur activity on these bands.

The real problem is the other way, with the relatively high power narrowband amateur operations causing interference to the LEO's terrestrial users. Due to the near-far effect, nearby amateur operators would overwhelm the SS coding gain and cause interference to the receivers of terrestrial users of the LEO services. That's where the danger to amateur radio lies in this proposal.

Once they have the camel's nose in the tent, and have established an economic interest in the spectrum with a large user base, the interference to their operations by amateurs would serve as an excuse for them to go back and request exclusive access to the spectrum, IE kick the amateurs out.

Of course if amateurs also adopted SS systems, and practiced proper power control (required by amateur regulations, but ignored in amateur practice), there would be negligible interference in either direction. But amateurs appear unlikely to do that voluntarily, so conflict would

be inevitable. And amateurs don't wield either the economic or political power to prevail in such a conflict.

We may win this time, and I've dutifully filed comments supporting amateur radio, but ultimately we can't continue to warehouse spectrum. The pressure to effectively utilize the spectrum will continue to mount, and unless *we* start using it effectively, others ultimately will.

This is deadly serious. The FCC has made it very plain that they will no longer condone warehousing of spectrum. They are in the process of forcing broadcast to give up the spectrum it has warehoused. Congress has mandated that warehoused military spectrum be released. And that leaves amateur radio as the only major warehouser of spectrum left untouched. That can't last long.

Even Better Burt! Since APRS is digital (but you knew that) you need
not hear any of that horribly inefficent blabber. Just objects on a computer
screen.

BTW, As a former police dispatcher and PO (I even worked in Yarmouth,
hey, maybe I arrested you!) I understand your comments about communication.
But it's easy to critisize from the armchair, isn't it? I have been in radio
communication situations in which life depended upon good skills. Since
a lot of that experience was on the Cape, maybe it was a life of someone you
knew. I don't take this stuff lightly.

I still have a cottage in Dennisport BTW (off Old Wharf Rd.) I even have a
weather station there you could monitor if you were on APRS.

I have yet to be arrested. You sound like a very competent person.
Yes it is easy for me to bitch but I have paid dues over the years.
Once we could not get hams to help out at a Beach Boys concert at Otis
so my daughter, who was 8 at the time (KA1VBQ) was paired with an adult
Red Cross worker and she did fine.

Call me when you are here. It would be a first for a ham that does not
agree with me to say so in person.

Burt, Just what are you doing to make ham radio more interesting to the young folks. What are you doing to bring more young folks into the hobby and keep them there??

It is real easy to sit back and spout a lot of hogwash about how boring, and how stupid and all of the rest of the blah blah blah that I see comming from you.

Have you started to put together a high speed packet network, at a speed high enough to use the internet browsers on? If computers interest the kids, Add computers to the radio, only do it at a speed that will hold their interest. If you come to Dayton this year look me up. The Consolidated Electronics Booth as I work for them and get stuck there for the three days. I will introduce you to a friend of mine, in fact several. One started the 19k2 network around here on 440 several years ago. He and I along with hams around the country are trying to get 900 megs off the ground with spread spectrum. All to get more speed so that ham radio can compete with the internet. Another friend is a scout leader, Their class this time around has over 40 students, all looking for that ticket as he has made ham radio interesting to the scouts by arrainging field day out at the scout camp. He has set up a satellite station to work the birds with the boys right there.

Ponder those things Burt, You claim to be an educator, yet you cut, slice and condem rather than teach and enhance. I have kept my silence for a long time now and read what you have said. Perhaps I should continue to keep it, but I feel that someone has to point the truth out to you as you seem to be oblivious of it. There are many of us out here trying to put the ham back in ham radio and make it fun again, both for us and the young folks. Please quit lumping all hams in one heap and cutting us down. You are the one that gives ham radio a bad name to the non hams that read the news groups that you post your tirades to.

Fred ke8tq ke8tq@n8acv.#day.oh.usa.noam

Come to Dayton this year and stop at the TAPR booth to say hello......

Hello Peter,

I recommend the British magazine Short Wave Magazine - I think you can get it in NZ. Among many other features it runs a monthly 2 or 3 page column on weather staellites written by Lawrence Harris, in a very accessible form.

I also strongly recommend subscribing to the automatic WXSat mailer list. Below are attached a couple of recent posts complete with visible header. If you study these you will see who to mail to subscribe. Here you will see amateurs and professionals exchanging information. This is an excellent forum.

You might also consider joining the Remote Imaging Group (RIG). For 10 Quid each year you get a solid journal every quarter containing first class articles on satellites, receiver and antenna construction, pictures and how to interpret them plus much more. Take a look at the RIG web-site, given below.

The following is forwarded by the wxsat mail list daemon.

Could somebody please post Burt Fisher's home address and telephone number on these newsgroups he keeps crossposting to so we can call him (like maybe when I'm reading the news at 2:00 A.M.) and tell him what we think of his abusive drivel and/or mail him dead rodents and such?

I read somewhere about some guy being a public pain in the ass and being subscribed to like 300 "bill me later" subscriptions to everything from porn magazines to Forbes. Surely somebody out there has a similarly wonderful idea about how to deal with Butt Fisher. If he wants to make himself a public figure, then we can treat him as such, you know posting details about his formerly private life, what kind of undergarments his wife wears, etc. I'd suggest to Butt Fisher that life as a private citizen is a little nicer than life as a public figure. I think a good argument can be made that his repeated controversial postings on USENET already make him a public figure. Thoughts?

Some people could constantly mail bomb his account until his ISP cuts him off. Of course, he could switch to another ISP, and then the mail bombing might start again. However, I'm not recommending such a thing....

But..., its real easy to set up a cron jobs under unix to send it a huge 100k message every five minutes. If 50 people started doing that ... well, you get the pictures.

In case you missed the number of birds...
From Edupage:

TELEDESIC LOOKS AT SCALING BACK
Teledesic Corp., the high-profile, $9-billion satellite communications project backed by cellular magnate Craig McCaw and computer mogul Bill Gates, is exploring options to scale back its 840-satellite system, beginning initially with just 288 "birds." The satellites will occupy a low-Earth orbit, 400-700 miles above the Earth, circling in 12 orbital planes or "rings," with 24 satellites in each ring. A spokesman for Teledesic says the company "has not altered" its original plan, but may start off with a more modest arrangement. (Wall Street Journal 19 Feb 97)

To all who have seen Burt Fisher's relentless attacks in various newsgroups:
Don't feel alone. He got a new Packard Bell for christmas and discovered that he could try to force his views on more people than if he just stuck to the classroom full of ninth graders he's trying to teach broadcasting. I wonder if he still needs help getting rid of that bus mouse he doesn't really have?

This is true. You can't see a thing on his web site unless you let him execute Media Player on your machine. I've got a problem just allowing executables being sent to, and run on my machine to suit someone elses whim. With this guy's attitude, who knows what you'd end up with.

Dear Friend,
Five minutes and five dollars can change your life!!!THIS IS THE FAIREST, MOST HONEST WAY I KNOW TO SHARE THE WEALTH! Would you like to make thousands of dollars, quickly, legally, with NOCATCH? Then keep reading..... please take five minutes to read thisarticle; it will change your life, just like it did mine. It's true! You can make up to, or over, $50,000.00 in 4 - 6 weeks; maybe sooner! I SWEAR I'M NOT LYING TO YOU, AND THIS IS NOT A SCAM! If you're interested, keep reading; if you're not, I apologize forwasting your time.

Here we go. A little while back, I was browsing through these newsgroups, just like you are now, and came across an article similar to this that said you could make thousands of dollars in weeks, with only an initial investment of $5.00!! So, I thought, "Yeah, right, must be a scam", but, I was curious, like most of us are, and kept reading. Anyway, it said that you send $1.00 to each of the five names and addresses stated in the article. You then place your own name and address in the article at the bottom of the list at #5, and post the article in at least 200 newsgroups, (there are thousands). No catch, that was it! So after thinking it over, talking to a few people first, I tried it.I figured what have I got to lose except for 5 stamps, and $5.00, right? Well, guess what....within 7 days, I started getting money in the mail! I was shocked! I still figured it would end soon, and didn't give it another thought. But then money kept coming in , tripling in size and multipying by 10 - 20 times the amount that I got the first week! In my first week I made about 20 - 30 dollars. But, by the end of the second week, I had made a total of over $1000.00!!!! In the third week, I had over $10,000.00, and its still growing. This is my fourth week, and I've made about $42,000.00 TOTAL, and the money is still coming in.....Let me tell you how this works, and most importantly, WHY it works, also, make sure you print a copy of the article NOW, so you get the information off of it, and begin making money.The process is very simple, and it consists of 3 EASY steps:

STEP 1: Get 5 separate pieces of paper and write the following on each sheet of paper...."PLEASE PUT ME ON YOUR MAILING LIST", and then write your NAME AND ADDRESS. Get five $1.00 bills and place ONE inside each piece of paper that you just wrote on. Fold each paper so the bill will not be seen in the envelope, (otherwise, nosey people who like to steal envelopes with money in it won't get yours). Put one paper inside each envelope, and seal it. Do the same for all five. You should now have 5 envelopes, sealed, EACH with a piece of

paper AND a $1.00 bill, stuffed inside of the paper. Make sure those words that were stated above, are written on each paper. What you are doing is creating a service; this is PERFECTLY LEGAL. Now then, mail the 5 envelopes, with the paper and $1.00 bill in each, to the following 5 addresses:

1. D. Ellis, 8301 W. 92nd St., Overland Park, KS 662122.

2. J. Krakowiak , 1112 W. Broadway #1, Anaheim, Ca 928053.

3. J. Sides, Lamar Box 1, South Plains College, 1401 S. College Ave.,Levelland, TX 79336

4. Areg Mkrian, 15 Alma Ave. Belmont, MA 02178-4404

5. A Karns, 4000 NW 53rd, Oklahoma City, OK, 73112

STEP 2: Now take the #1 name off the list that you see above, move the other 4 names up, (5 becoming 4, 4 becoming 3, etc.), and put YOURNAME as number 5 on the list. You can slightly alter this article ifyou need to; editing what you need to edit.

STEP 3: Post your amended article, (with your name at #5), to at least 200 newsgroups, (There are close to 19,000 of them). HOW TO DO THIS:If you are using Netscape 3.0, do EXACTLY the following:
1) Click on any newsgroup, like normal, THEN click on 'TO NEWS',which as on the far left when you're in the newsgroup page. This will bring up a box to type a message in.
2) Leave the newsgroup box like it is. CHANGE the subject box to something flashy, like, "NEED CASH $$$ READ HERE $$$" or "FAST CASH"!!
3) Tab once, and you should be ready to type. Now, re-type, (onlyonce), this WHOLE ARTICLE WORD FOR WORD, except to insert your name at#5, and to remove #1 off the list; plus any other small changes youthink you need to make. Keep most of it the same!!
4) When you're done typing the WHOLE article, click on FILE in THISBOX, right above send, not where it says Netscape News On The FirstBox. Click on SAVE AS when you're under FILE. Save your article as a text file to your C: or A: drive. DO NOT SEND OR POST YOUR ARTICLE UNTIL YOU DO THIS. Once saved, move on to number 5 below.
5) If you still have all of your text, send, or post, to this news group, now, by just clicking send; which is located below FILE, and right above Cc:.
6) Here's where you're going to post all 200. OK, click on any newsgroup, then click on 'TO NEWS', again, in the top left corner. Leave theNEWSGROUPS BOX alone. Again, put a flashy subject title in the SUBJECT BOX. Hit TAB once you're in the body of the message, and then click on ATTACHMENTS, which is below the SUBJECT BOX. You will get another box to come up. Click on ATTACH FILE, then find YOUR file that you saved; click once on the file, and then click 'OPEN'. Now click on OK. If you did this right, you should be able to see your file name in the attachments box, and it will be shaded green.If you use IE EXPLORER, it's just as easy......HOLDING DOWN THE LEFT BUTTON,

HIGHLIGHT THIS ARTICLE. THEN PRINT THIS ARTICLE FOR YOURRECORDS TO HAVE THE NAMES OF THOSE YOU WILL BE SENDING $1.00 TO. NEXT, GO TO THE NEWSGROUPS AND PRESS "POST AN ARTICLE". A WINDOWWILL OPEN. TYPE YOUR HEADLINE IN THE SUBJECT AREA AND THEN CLICK INTHE LARGE WINDOW BELOW. PRESS "CRTL" AND THEN "V", AND THE ARTICLE WILLBE PLACED IN THE WINDOW. IF YOU WANT TO EDIT THE ARTICLE, DO SO, AND THEN HIGHLIGHT AND COPY IT AGAIN. NOW EVERY TIME YOU POST THE ARTICLE IN A NEWNEWSGROUP, ALL YOU HAVE TO DO IS REPEAT "CRTL" AND "V" AND PRESS POST.
7) That's it. Each time you do this, all you have to do is type in a different newsgroup, so that way, it posts to 200 different newsgroups. You see? Now you just have 199 to go!!! (Don't worry, eac hone takesabout 30 seconds; once you get used to it). REMEMBER ..200 IS THE MINIMUM. The more you post, the more money you'll make.AND THAT'S IT!!!! THOSE ARE THE ONLY 3 STEPS THERE ARE!!! You are now in the mail order business, and will start receiving $1.00 envelopes from various people, all over the world, within days.(HINT: THE MORE NEWSGROUPS YOU POST TO, THE MORE MONEY YOU WILLMAKE!). You may want to rent a PO Box, eventually, because of all the mail. If you wish to stay anonymous, you can come up with a name, suchas "manager" or"investor". Just make sure all the addresses are CORRECT, please! LET ME TELL YOU WHY THIS SYSTEMS WORKS!! Out of every 200 postings, let's say I ONLY receive 5 replies, (this is actually VERY LOW). So, I made $5.00 with my name at #5. Now then,each person who just sent me $1.00 makes, say, only 200 postings, now with your name at number 4, WHICH IS A TOTAL OF 1000 POSTINGS, not including yours too. 50 people send you $1.00 now; that's $50.00 you just made! Now then, your new 50 agents post 200 each with YOUR NAME AT NUMBER 3, or10,000 postings, (50 X 200). Average return is 500 at $1.00 each, which is $500.00! They make 200 postings, which is 5000 returns at $1.00 each,which is $5000.00!! And finally, 5000 people make 200 postings each,with YOUR NAME AT NUMBER 1. YOU NOW GET A RETURN OF $50,000.00 BEFOREYOUR NAME DROPS OFF THE LIST!! AND THAT'S IF EVERYONE MAKES ONLY 200 POSTINGS, AND IF ONLY A SMALL % PEOPLE RESPOND!!!When your name is no longer on the list, you just take the latest posting that is appearing in the newsgroups, and SEND OUT ANOTHER $5.00 to THE NAMES ON THE LIST, PUTTING YOUR NAME AT #5 AGAIN, AND START POSTING AGAIN!! The thing to remember is, do you realize that THOUSANDS OF PEOPLE ALL OVER THE WORLD ARE JOINING THE INTERNET AND ARE READING THESE ARTICLES EVERY DAY!! JUST LIKE YOU ARE RIGHT NOW!!! So, can you afford $5.00 and see if it really works? I think so.......People have said, "What if the plan is played out and no one sends you the money?" So what! What are the chances of that happening when there are TONS OF NEW, HONEST USERS AND NEW, HONEST PEOPLE joining theInternet and Newsgroups everyday? and, are willing to give it a try? Estimates are at 20,000 to 50,000 new users, each and every day!! Remember, play FAIRLY and HONESTLY and this WILL WORK, I PROMISE YOU!! You just have to behonest. Make sure you print this article out, RIGHT NOW, also, try to keep a list of everyone that sends you money, and always keep an eye on the newsgroups to make sure everyone is playing fairly. REMEMBER: HONESTY IS THE BEST POLICY!!

YOU DON'T NEED TO CHEAT THE BASIC IDEA TO MAKE MONEY! GOOD LUCK TO ALL, AND PLEASE, PLAY FAIRLY; YOU WILL REAP THE HUGE REWARDS FROM THIS.....WHICH IS TONS OF CASH!!! ****By the way, if you try to deceive people by posting the messages with your name on the list, and by not sending the money to the people already on the list, you will not get much. Someone I talked to knew someone who did that, and he only made $150.00; and that was after seven or eight weeks!! Then, he sent the 5 $1.00 bills; people addedhim to their lists, and in 4 - 5 weeks, he had over $10,000.00. THIS IS THE FAIREST, AND MOST HONEST, WAY I HAVE EVER SEEN TO SHARE THE WEALTH OF THE WORLD WITHOUT COSTING ANYTHING BUT OUR TIME! GOOD LUCK, AND HAVE FUN!!!!

Hi Jim,
there are several frequencies You can try:

1) 145,800 MHz down 145,200 up, doppler shift approx. +/- 3kHz voice or packet

2) 437,950 MHz down 435,750 up, doppler shift +/- 10 kHz, this is a repeater,
You will also need a CTCSS tone to open it. Cannot remeber, 141.?? maybe

3) 437.925 MHz down 435,725 up, doppler shift +/- 10 kHz, this is the QSO-
mode where You can talk to the astronauts. Voice messages will be
transmitted as well on this frequency.

4) 437,975 MHz down 435,775 up, doppler shift +/- 10 kHz, packet radio

there is always only one of the 70 cm frequencies in use. Good luck,
73, Roman (DL2SFE)

618. NORAD Two-Line Orbital Element Set: Space Shuttle (97050.27936321)

Newsgroup: rec.radio.amateur.space

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system. As a service to the satellite user community, the most current elements for the current shuttle mission are provided below.

Element sets (also updated daily), shuttle elements, and some documentation and software are also available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

> and keep them there??

I show 30 9th graders ham radio every year on the air, they also see the
ARRL self serving video tape and I talk about the hobby spewing the
company line.
And you are doing just what?

> There are many of us out here trying to put
> the ham back in ham radio and make it fun again, both for us and the young
> folks. Please quit lumping all hams in one heap and cutting us down. You
> are the one that gives ham radio a bad name to the non hams that read the

There may be "many" as you say but overall these many are a very small
percentage.

I will be very pleased to present myself anywhere on Cape Cod that you
invite me to.
I will not barge in UNINVITED.
I will speak to any group about my views but if off CApe travel is
involved, I need expenses.

Most belong in one group.
The reason few here agree with me is that all those that agree with me
left the HOBBY.

If you want ANY licensed amateur's address and phone number, do a search for QRZ on the web. Once there, you can input the callsign, and instantly get the info you want. Beware, that sometimes weird people use others' callsigns. Please be careful not to flame an innocent bystander in the process.

Good luck, and please think before you act harshly. The net is fun, and some people just are 'that way'.

From: Mike Tatum <miket@cybatek.dungeon.com>
Message-ID: <01bc206b$8a55ce80$ae9482c1@cybatek.dungeon.com>
Source record: 19781

Hi All!

I'm very much into Morse at the moment and am attempting to get contacts via AO-10 in A1A mode.

I am a very good signal on the downlink, no S reading but very load, however I never get any replies??

There are plenty of voice contacts going on but no A1A ???

Does anyone use A1A on AO-10 anymore ???

Would like to hear from anyone interested in a sched!!

Please E-Mail direct ...

Actually iff there are sufficent numbers maybe the hams there will have
sufficent guts to call me names to my face. Is that what YOU need,
10 hams in back of you while you play tough guy?

Because even if there are 100 hams for me to face I will appear.

Nope, sorry Burt but I am not an ARRL type person. Those of us that work
with the young folks here show them **REAL*** ham radio and not the tripe
that is spouted by some on the news groups or on the HF bands in certain
places. But then I doubt that you would do any differant to lure the
young in as your posts show that you really only do the motions of trying
not put any heart into it. It is plain to see that your love is in the
commercial area. Yup, I was in the commercial area too, I guess if you
call being a chief engineer for a couple of radio stations commercial.
But that is a differant story....And only has enhanced my abilities and
enjoyment of ham radio.

enuff said. end of thread.

Fred Ke8tq

I may not always agree with what you say. But I will defend to the
death your right to say it.

>The above quote clearly does not apply to Packet SYSOPS, does it?

The right of free speech comes as a bundle with the responsibility of free speech. Since you demonstrate little responsibility yourself it would appear that packet sysops are forced to take responsibility. The pity is that now you will have your electronic tantrums on the news groups. Perhaps if all of those on the news groups who were tired of your spamming were to flood your provider with complaints your provider would take the same action as the packet sysops. Then you could scream your complaints out on the beach.

To answer your as yet unasked question, Yes I would say the above to your face, I just would not fly across the country to do it.

I have a large assortment of like new boards, modules, 1/8" flexible hard
line with SMA connectors on both ends, BNC chassis connectors, various interconnecting cables,etc.

The many boards contain such things as SAWTEK SAW filters of various bandwidths, transitors, IC's, miniture relays, torriods, trimmer capacitors,
filters, modules, etc.

I am selling as a "grab box". If you are a builder, this is a gold mine of
goodies.

I will sell the above for $50 plus $10 shiping.

I also have one have one Hewlett Packard 33314A coaxial switch left. DC to 4 GHz. Will sell for $45 shipped UPS.

One Amplica broad band pre amplifier which works from 1 to 3 GHz perhaps even lower and higher. I only checked it in that range. Letting it go for $25 shipped UPS.

Seller: George Keller W3SAP
Email: gakeller@worldnet.att.net

642. How to be a class ham (not always any oxymoron).

Released with the permission of the author who required no editing take
place:
(this is what a person of class and intellect says, it does not
necessarily agree
with me and where he does not he resorts to facts over insults).
Burt

>Hello Burt,
> I just wanted to drop you a note concerning the thread currently running
on the rec.radio.amateur.equipment newsgroup. After ready the many
replies,
flames, etc, I would have to agree with *some* of your comments and
thoughts. I think you have a picture in your minds-eye of the "typical"
ham
operator being a rag-chewing, cigar smoking, foul-mouthed,
over-glorified
CB'er. Though there are MANY that fit that bill, but, I think better
than
half don't fit that desciption. As I'm sure you know, there are many of
us
who do public service such as Skywarn, RACES, ARES, etc. To group those
of
us who do public service with the lids is an unfair condemnation. I
literally put myself at risk when I go out and spot for the weather
service
and don't look at myself as being involved with a hobby at that point,
but
rather, an important part of a system that can and does save lives.
> After looking over your website, following the thread for the past few
days, and reflecting on the garbage I hear on some of the bands, I can't
argue with a good portion of your comments. Many of the respondants have
been very articulate, others have shown that they think with their
southern-most body part. I believe you are a person who is truly
concerned
about the state of Amateur Radio and it's related services. Your
opinions
may not neccessarily be within the mainstream of the hobby, but they do
count, and I respect that. I hope that you can also respect the efforts
of
those of us who DO look at Amateur Radio as a way to help others, and
show
that by doing the service work. We are not all lids, and I hope you can
see

that.
> I decided to send this note to you personally, rather than through the newsgroup, so as to try and get it back to the subject it is supposed to cover. I look forward to your reply, and your thoughts on my comments.

I suspect you are a ham in the tradition of KV4FZ, that notorious personality of the (14.313 MHz) airwaves. Never the less, I would enjoy meeting you on the air sometime, say, on 20 Meter phone in the General class portion of the band. I know you are a cw buff but I think phone would give a bigger audience for you and allows others to make comments more readily. However, if hams are as gutless as you say, there should be few comments.

As far as the facts about Little Leo's are concerned, I am sure you are armed with all sorts of technical data about their compatibility with the existing uses in the bands. However, I would like to know where you got such data because everywhere I go says that such data does not exist.
This is not to say that such data would change my position. I am against any commercial intrusion into the amateur radio allocations, especially the ones that are being fully utilized such as the 2 M and 75 cm bands.

I look forward to your reply.

Sincerely,

Michael Goad

Actually, Burt, your news article has helped me to decide in favor of
sending the FCC an e-mail in SUPPORT of the ARRL's position and to
further encourage every ham I talk with to do the same. If you are so
against amateur radio and all it is and does that you are willing to let
the commercial interests come in and take over (you know they won't be
"shared" for long) two of the most utilized bands we have, why don't you
turn in your license and get out of ham radio all together.

If you believe that protecting the interest of amateur radio is not in
the best interest of the general public, perhaps you should come down
and
talk to some of the victims and rescuers involved in the aftermath of
hurricane Andrew in Dade County, FL. Amateur radio's ability to be used

in times of disaster is highly dependent on the bands the little leo's want. We cannot allow any intrusion on these bands if we are to be useful
to the public in times of emergency.

For the record, I am a communications technician for the fire-rescue department of a local county, so I do have some first hand knowledge of the events following hurricane Andrew and the utilization of amateur radio there prior to the arrival of outside help from FEMA and others. Because of its usefulness, there has been a greater effort by the local governments in south Florida to work with the amateur radio community to ensure that this service will be available in the future. Many agencies now have amateur radio stations in key facilities and have lined up operators to run them in emergencies. Some have provided learning materials for their own personnel who expressed interest in becoming ham radio operators.

I am not sure what your motivation is in backing the little leo's, but I suspect it is financial. What we are talking about here goes way beyond the almighty dollar in my book. I am here to let you and all who read this that we will fight this to the end.

Sincerely,

Michael Goad

In actuality, Burt has been invited numerous times to a moderated roundtable type forum on the band and frequency of his choosing. Each time, he is, what is referred to as a no show, thus proving the saying that those who talk the talk (the gut vs gutless scenario) don;t necessarily walk the walk

Look for the Burt special event station to be setup VERY near his home sometime around the end of March. The amateurs of Cape Cod and surrounding areas will be invited to attend this. One special feature will be to show Burt in his true environment. Hopefully, Burt will make an appearance and even work some stations (after all, we will be parked in his neighborhood) We (and there is going to be more than one) will be connected to the Internet and will be demonstrating the public minded Burt to all his neighbors

More details as time progresses

Yes Mike, CW is very much used on AO10 for the simple reason that it works so very well! Do not become too discouraged by the lack of replies although I must admit it might seem more useful to be on SSB. Right now the path between us is rather bad but I will certainly look for you and others that care to keep CW alive on AO10! Cliff Buttschardt K7RR

I will appear on 20 meter voice and you can gather a crowd as I doubt
you can talk to me without a fan club for support. Hams are as gutless
as I say. If there are comments there will be no calls attached to them.

> As far as the facts about Little Leo's are concerned, I am sure you are

I have zero facts except any use has got to be better than loser hams.

Total bullshit. Tommorow is Sunday let us have a go at it.
I can go on almost ANY band.
Why don't you cite ANY time a ham has accepted my challenge, they always have an excuse, (my rig is packed away, the antenna is down, or just no reply).

> Look for the Burt special event station to be setup VERY near his home

I already told a local ham of your offer. If I am invited I will come.
The local hams despise me more than you do but they have zero guts.

You know I do not hide, you can see AND hear me on my WWW page, can you say the same for any others around here?

Burt,

You call yourself a teacher? A mentor entrusted to help shape the minds of our young children? Heaven forbid, a roll model? By your posts you have proven that you are incredibly opinionated, not above using foul language in an open forum of mutual learning that is easily accesable by curious young minds, you point your "holier-than-thou" finger at Amateur Radio Operators and seem to have no problem speaking ill-will of this group of human beings. Can you tell me just what exactly it is that makes you a better person than any of these people you speak so poorly of? I am an Amateur Radio Operator myself and I take great pride in it, I also pride myself on being a volunteer interpreter for the deaf, a volunteer for the American Legion, an advocate for the rights of Veterans and the disabled, among other similar interests. I literally volunteer more of my time than I work for a wage, I may be poor but if pride were gold I'm a very rich man.. Can you say that, Burt?

This is America, Burt, and you are by the first ammendment entitled to voice your opinion, but you already know that. I too am an American and am entitled to my opinions and my opinion is that you are a bigot and have no business in the teaching profession if you are incapable of treating other human beings as the equals that they are. In the mean time, I'll be praying for your students..

If you have such a problem with Hams, why not (on the way to church next Sunday) rip up your FCC license into little pieces and go about helping your fellow man in a manner more constructive than the one you have chosen.

John KB7VZL (and darn proud of it)

I am the way I am because as a teen I was an active ham radio operator. I used "the mike" to not face real people thus missing my teen years the way real people experience it. It is not ham radio's fault of course, the fault is entirely mine. However I am not that person now and I despise in others what I despised in myself. I am much like a reformed smoker (they tend to be fanatics against smoking). When I hear hams on the air blabbing on about nothing, doing nothing, being nothing, kissing each others butts so much their lips turn brown I want to anything other than be like them. Further I was a gutless wimp up to 18 years of age (fit
in well with ham radio), I would cower with the slightest threat but I learned that fear is far worse than being beat up and rarely would have anyone beat me anyway. So today if you want to threaten me the odds are high (especially if you are a ham) that nothing will ever be carried out. And if threatened I always tell the person to carry out the threat even if my acts that caused the threat were wrong because once you threaten me that closes the door as to the legitimacy of your cause.

To those folks in the ASD support group much of the above applies. Most of you are uncaring men whose spouses finally wised up (hams make great uncaring spouses). In the end I am a far deeper and caring person than 90% of you. And to those that PERSONALLY insult me and/or use profanity, those acts say so far more about you than I. If you read my mail carefully you will rarely see me personally insult anyone and rarely will I use profanity. I argue ON THE MERITS. When you see someone attack the person it means their cause is without foundation.

> If you operate a PBBS to serve all amateurs who the hell are you to
> decide what THEY should read.

Exactly..*I* am the owner/operator of the PBBS and *I* decide what gets read. *I* take the input of the people who utilize MY equipment, *I* decide what content is acceptable or not. Not YOU or the FCC

That's who the hell *I* am. *I* and the others on my PBBS consider your posts inappropriate to anything related to amateur radio, hence, no posts.

I firmly believe you have every right to show the fool that you may or may not really be. HOWEVER, I DO NOT repeat, DO NOT have to give the platform to prove it. That's for others to do.

If you're suggesting that I have to allow you to access my property (equipment, etc.) then you are barking up the wrong tree.

So they are not required to read them. Do you think that those that
agree with me will risk
being locked out by you if they tell you they agree?

> If you're suggesting that I have to allow you to access my property
> (equipment, etc.) then you are barking up the wrong tree.

You are using public frequencies you have a moral right to allow all
comers.
Next Maybe you will deny access based on color?

First things first 75 very crowded right now (7:55 EST) but will try
3.875 at 9:00 EST

Now for the rest

In all honesty, Burt, you are the only one I've ever "locked out". And
quite frankly, I have found very few if any locally who will agree with
anything you have to say concerning amateur radio

I also reserve the right to preview all for sale messages for content. I
allow only amateur and amateur related materials to be posted. Cars,
guns, recipes all get round filed.

Funny, I have yet to see a radio that can determine a person's color
based on a callsign. Is this something new?? How can I tell a person's
color based on his posting to my PBBS?? Enlighten us Burt

Tried again on 75 at 9pm EST, no luck, to much noise. Maybe next week

Hello,

I am from california and this is a rather large item(s) so pick up is
Prefered.

I am selling my satellite station to pay for school.

TX/RX
FT-726R: (2m,430,6m,sat unit) (Just serviced at yaesu so A-OK)
With external tone encoder (For mir)
AMPS
Mirage 1010 UHF amp (10watt in =100 out)
Mirage 1070? vhf (I am not sure on the numbers but its 10w -> 70w.)
PRE-AMPS
VHF Lanwheir pre-amp (Very sensitive low noise..they are hard to find,
but it might be worth looking it up for the specs...they costed about
$150 each)

UHF " "

ANTENAS
KLM-435-40CX (40 element circ. polarized beam for uhf)
KLM-2M-22C (22 element circ. poloarized for vhf)

MISC:
Yaesu 5600 azmuth/elevation rotor (similar to the 5400 but "heavyduty")
2 30 foot runs of 3/4 inch hardline with conector etc.
fiberglass cross boom re-inforced with a hardwood dowel
20 foot tower
All the conectors and misc coax needed to hook up the amps,pre amps,
radio and antenias together.
2 50 foot runs of rotor cable

To buy all this stuff new would cost a small fortune.
E-mail me for offers.. I am looking for about $2000 you pay shipping or
pick it up in california (Bishop, ca)

Hi:

I'm thinking about selling my Yaesu FT-726r and I was wondering what they are currently going for. This one has the 2m/430 modules and satellite board.

It works like a champ but I decided to upgrade to the FT-736r and I don't want to let it sit around in a box.

Thanks,

Mark Fossum - N0NSV

The BBS for which I'm a co-sysop has been on the air for about 8
years, and in all that time we have never locked one legitimate ham
out of the BBS for any reason. We've handled dozens of Burt's
rantings, as have all the upstream SysOps, obviously. Burt loves to
tar hams with a broad brush, but he gets more on himself than he does
on others.

Yes Mike, CW is very much used on AO10 for the simple reason that it works
so very well! Do not become too discouraged by the lack of replies
although I must admit it might seem more useful to be on SSB. Right now
the path between us is rather bad but I will certainly look for you and
others that care to keep CW alive on AO10! Cliff Buttschardt K7RR

Hello Peter,

I recommend the British magazine Short Wave Magazine - I think you can get it in NZ. Among many other features it runs a monthly 2 or 3 page column on weather staellites written by Lawrence Harris, in a very accessible form.

I also strongly recommend subscribing to the automatic WXSat mailer list. Below are attached a couple of recent posts complete with visible header. If you study these you will see who to mail to subscribe. Here you will see amateurs and professionals exchanging information. This is an excellent forum.

You might also consider joining the Remote Imaging Group (RIG). For 10 Quid each year you get a solid journal every quarter containing first class articles on satellites, receiver and antenna construction, pictures and how to interpret them plus much more. Take a look at the RIG web-site, given below.

The following is forwarded by the wxsat mail list daemon.

STS-82 landed this morning (21Feb97) at 8:32 UTC.

Visit the site at http://shuttle.nasa.gov/ for more info.

John - N3YPR

Date: Sat, 22 Feb 1997 15:35:58 -0500
From: George Keller
Subject: UHF/Microwave components FS

I have a large assortment of like new boards, modules, 1/8" flexible
hard
line with SMA connectors on both ends, BNC chassis connectors, various
interconnecting cables,etc.

The many boards contain such things as SAWTEK SAW filters of various
bandwidths, transitors, IC's, miniture relays, torriods, trimmer
capacitors,
filters, modules, etc.

I am selling as a "grab box". If you are a builder, this is a gold mine
of
goodies.

I will sell the above for $50 plus $10 shiping.

I also have one have one Hewlett Packard 33314A coaxial switch left. DC
to 4 GHz. Will sell for $45 shipped UPS.

One Amplica broad band pre amplifier which works from 1 to 3 GHz perhaps
even lower and higher. I only checked it in that range. Letting it go
for $25 shipped UPS.

Actually the 9th graders do not need to hear my views. They have open
minds.
They are far more alive than most hams or ASDers.
I do not have a Packard Bell.

Better yet BURT.. you choose. Post it here, post it on the NE DX cluster, time and place, I will be there and I am sure many others will be there. If fact, e-mail me a code word so that any Burt wanna-bes how get on the frequency first will be exposed as liars and fabricators

> I already told a local ham of your offer. If I am invited I will come.
> The local hams despise me more than you do but they have zero guts.

Excellent, BTW can I set up on your front lawn??? Operating from a car seems a bit difficult/ Very do able, but it would be so much nicer to spread out on a table with electrical power.

> You know I do not hide, you can see AND hear me on my WWW page, can you
> say the same for any others around here?

Never been there. Have read about having to download files to access certain things...a BIG NONO in my book

He my friend is the guy who owns the PBBS. The 18th century equivalent
was the printing press. Perhaps as an educator you remember the famous
quote, "Freedom of the press is for he who owns a press." Mr. Beford
owns the press and takes the responsibility, he get to decide what
passes his node. You don't like it tough.

690. What's an FBOM?

Newsgroup: rec.radio.amateur.space
Date: 1997-02-24 00:00:00 UTC
From: n9vjg@aol.com
Message-ID: <33113721.3681293@news.imaxx.net>
Source record: 19744

Are you reading this? Great! That means it wasn't written it for nothing. Not to worry, you won't be wasting your time.

Amateur Radio is a hobby and like all hobbies, it needs to be fun and rewarding. We at FBOM Magazine may not be able to straighten out your 40
meter beam after a hurricane or stop commercial satellites from squatting
on your VHF repeater input, but what we can do is present a lighter side
to all the QRM.

FBOM Magazine is the new generation of radio hobby publications, focusing
mostly on amateur radio operators (Hams). FBOM Magazine is for everyone,
from the guilt-ridden Extra class ham to a Technician or CBer that's tired
of being blamed for the erosion of family values in America. FBOM Magazine, the official publication of the Bad Signal Club--A free-thinking
state of mind where you are certified to transmit scratchy signals, crack a
joke without saying "hihi," tune up on some Little LEOS and have a good
time laughing at others as well as yourself.

As if that wasn't enough, FBOM also pokes it's nose into the world of the
scanner junkie and the strongest competition to wireless communications,
the Internet.

*
* GET YOUR FREE SAMPLE ISSUE!!!
*
* Email N9VJG@aol.com now for your free sample of the latest issue!
*
* Visit our Web Site which is still under construction and
* in bad need of updating. Just nudge your favorite browser to:
* http://www.interaccess.com/uncle-del/FBOM/.
* If you have America Online, visit the FBOM Magazine folder
* in the Ham Radio Forum message boards, under "Manufacturers,
* Dealers & Vendors."
*

Why YOU should subscribe to FBOM Magazine:

1. You will earn your official Bad Signal Club membership and will be
able to operate any bands with a scratchy signal and tell the
complainers
to stick it where the sun doesn't shine.
2. Blatantly hilarious and unusual commentaries on life as a radio
hobbyist.
3. No boring propagation charts. We replaced those with "Radio
Horoscopes".
4. No articles for home-brewing outrageous tri-banders and RF amps.
Just
step-by-step guides on how to build contraptions like a
"rubber-duckie
plane" for your HT and how to clean nasty things out of your
microphone.
5. Wacky contests where you can win antennas, free chunks of used
RG-58
and other prizes.
6. Free classifieds for paid subscribers.
7. We don't make you feel inferior if you work channel 19.
8. Hey.. we're writing it, so why aren't you reading it?
9. FBOM is 100% biodegradable and fat-free!
10. No test is required for this upgrade.

Why YOU should subscribe to FBOM Magazine NOW:

Rates are CHEAP! 2-year (4 issues) subscription rate of $9. 1-year
subscription rate (2 issues) for $5.

For only $9 you can have 4 issues of FBOM Magazine delivered to you.
Hey
that's a pretty good deal--especially for a publisher that is terribly
desperate to gain more subscribers!

How you can give us your hard-earned money:

*
* Mail a check or money order for a 1 or 2 year subscription to
* "Eric Bond" (That's me, the publisher and janitor) and send it

Please, guys, can't you keep this stuff to rec.radio.amateur.misc? Isn't one newsgroup enough for this sort of childish squabbling without splattering it around to the homebrew and space newsgroups too?

Roy Lewallen, W7EL

> anything you have to say concerning amateur radio

Of course no one else will dare risk losing access for displeasing King
Steve.
I have been locked out of several PBBSes and the few that allow me in
get a lot of pressure to take me off but they are real men, they do not
like what I say but they believe in free speech.

> I also reserve the right to preview all for sale messages for content. I

You are doing what is legally required in most cases.

> color based on his posting to my PBBS?? Enlighten us Burt

Most of those that access your PBBS are local and you can see them
easily.
Are you available evenings on air?

Actually it does. I myself agree 100% with the above. HOWEVER, there is nothing that compels me to provide you with the soapbox by which you may practice it.

STS-plus is a nice satellite tracking program. You might want to get a
more recent version, however, as he is constantly making changes to it.

Get it at ftp.seds.org/pub/software/pc/sat

The sop* files are what you are looking for.

705. NORAD Two-Line Orbital Element Sets (TLE952)

Newsgroup: rec.radio.amateur.space
Date: 1997-02-24 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <5et714$qqr@blackbird.afit.af.mil>
Source record: 19759

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

****

You are technically correct, but ethically wrong wet. If you set up
to provide a public service as a BBS, you have a moral obligation to
forward all legal mail, or at least not to limit forwarding based on
personal considerations such as who is saying what. SysOps who censor
mail are a big problem on the ham BBS network, and responsible SysOps
should and will route around them.

If you're not part of an open network, you're just cluttering up
valuable space on the bands, and are giving jerks like Burt more
ammunition.

707. FS: Fiberglass Crossboom for Satellite Ant.

Newsgroup: rec.radio.amateur.space
Date: 1997-02-24 00:00:00 UTC
From: B077 <bmyers@primenet.com>
Message-ID: <33128D21.6478@primenet.com>
Source record: 19761
Cross-posted to: rec.radio.amateur.space,rec.radio.swap,rec.radio.amateur.antenna

For Sale:

Fiberglass 1-1/2 inch X 8 foot crossboom, new. Perfect for OSCAR Satellite Antenna setup. Consists of 1 eight-foot piece 1-1/2 inches diameter, 1/4 inch wall (1-1/4 inch I.D.) with 1 eight-foot piece of 1-1/4 inch solid rod inserted in it (tight fit). That makes, for all practical purposes, an 8 foot solid fiberglass crossboom to nicely fit your G-5400 rotor. Strong.

Price: $79.00 plus shipping UPS (it meets UPS requirements for length) in U.S.A.

Please reply to Bob: bmyers@primenet.com

Thanks.

You are welcome as is anyone to contact my students (dormouse1@juno.com
or my daughter at aurora24@rocketmail.com) and ask them for your self.
Foul language? I used ass, report me. You no doubt have seen the vile
profanity used against me? When compared to the public at large I am
indeed an ass but when compared to hams I am far superior than MOST.

Can you tell me just what
> exactly it is that makes you a better person than any of these people
> you speak so poorly of?

I do not call my wife THE WIFE or my daughter a harmonic.
I have a life, I care about other people, I have guts to name just a
few.

I also pride myself on being a volunteer
> interpreter for the deaf, a volunteer for the American Legion, an
> advocate for the rights of Veterans and the disabled, among other
> similar interests. I literally volunteer more of my time than I work
> for a wage, I may be poor but if pride were gold I'm a very rich man..
> Can you say that, Burt?

All of the above makes you a better man than I. Notice I deleted what
you "do" for ham radio.

I too am an American
> and am entitled to my opinions and my opinion is that you are a bigot
> and have no business in the teaching profession if you are incapable
> of treating other human beings as the equals that they are. In the
> mean time, I'll be praying for your students..

No need to pray for them, ask them if they need your prayers.
Hams are not equals, all others are or are superior than I.
Just how am I bigot?

No one here has the intellect to deal with my students OR THE GUTS.

Subject: AO-10 and A1A mode ???

Hi All!

I'm very much into Morse at the moment and am attempting to get contacts
via AO-10 in A1A mode.

I am a very good signal on the downlink, no S reading but very load,
however I never get any replies??

There are plenty of voice contacts going on but no A1A ???

Does anyone use A1A on AO-10 anymore ???

Would like to hear from anyone interested in a sched!!

Please E-Mail direct ...

Subject: FS:*Complete* Mode B setup

Hello,

I am from california and this is a rather large item(s) so pick up is
Prefered.

I am selling my satellite station to pay for school.

TX/RX
FT-726R: (2m,430,6m,sat unit) (Just serviced at yaesu so A-OK)
With external tone encoder (For mir)
AMPS
Mirage 1010 UHF amp (10watt in =100 out)
Mirage 1070? vhf (I am not sure on the numbers but its 10w -> 70w.)

PRE-AMPS
VHF Lanwheir pre-amp (Very sensitive low noise..they are hard to find,
but it might be worth looking it up for the specs...they costed about
$150 each)

UHF " "

ANTENAS
KLM-435-40CX (40 element circ. polarized beam for uhf)
KLM-2M-22C (22 element circ. poloarized for vhf)

MISC:
Yaesu 5600 azmuth/elevation rotor (similar to the 5400 but "heavyduty")
2 30 foot runs of 3/4 inch hardline with conector etc.
fiberglass cross boom re-inforced with a hardwood dowel
20 foot tower
All the conectors and misc coax needed to hook up the amps,pre amps,
radio and antenias together.
2 50 foot runs of rotor cable

To buy all this stuff new would cost a small fortune.
E-mail me for offers.. I am looking for about $2000 you pay shipping or
pick it up in california (Bishop, ca)

73's Reed

STS-plus is a nice satellite tracking program. You might want to get a
more recent version, however, as he is constantly making changes to it.

Get it at ftp.seds.org/pub/software/pc/sat

The sop* files are what you are looking for.

Did not get this message until 6 AM Monday.

> In all honesty, Burt, you are the only one I've ever "locked out". And
> quite frankly, I have found very few if any locally who will agree with
> anything you have to say concerning amateur radio

Of course no one else will dare risk losing access for displeasing King
Steve.
I have been locked out of several PBBSes and the few that allow me in
get a lot of pressure to take me off but they are real men, they do not
like what I say but they believe in free speech.

> I also reserve the right to preview all for sale messages for content. I
> allow only amateur and amateur related materials to be posted. Cars,

> based on a callsign. Is this something new?? How can I tell a person's
> color based on his posting to my PBBS?? Enlighten us Burt

Most of those that access your PBBS are local and you can see them
easily.
Are you available evenings on air?

From: n9vjg@aol.com
Subject: What's an FBOM?

Are you reading this? Great! That means it wasn't written it for
nothing. Not to worry, you won't be wasting your time.

Amateur Radio is a hobby and like all hobbies, it needs to be fun and
rewarding. We at FBOM Magazine may not be able to straighten out your
40
meter beam after a hurricane or stop commercial satellites from
squatting
on your VHF repeater input, but what we can do is present a lighter
side
to all the QRM.

FBOM Magazine is the new generation of radio hobby publications,
focusing
mostly on amateur radio operators (Hams). FBOM Magazine is for

everyone,
from the guilt-ridden Extra class ham to a Technician or CBer that's
tired
of being blamed for the erosion of family values in America. FBOM
Magazine, the official publication of the Bad Signal Club--A
free-thinking
state of mind where you are certified to transmit scratchy signals,
crack a
joke without saying "hihi," tune up on some Little LEOS and have a
good
time laughing at others as well as yourself.

As if that wasn't enough, FBOM also pokes it's nose into the world of
the
scanner junkie and the strongest competition to wireless
communications,
the Internet.

*
* GET YOUR FREE SAMPLE ISSUE!!!
*
* Email N9VJG@aol.com now for your free sample of the latest issue!
*
* Visit our Web Site which is still under construction and
* in bad need of updating. Just nudge your favorite browser to:
* http://www.interaccess.com/uncle-del/FBOM/.
* If you have America Online, visit the FBOM Magazine folder
* in the Ham Radio Forum message boards, under "Manufacturers,
* Dealers & Vendors."
*

Why YOU should subscribe to FBOM Magazine:

1. You will earn your official Bad Signal Club membership and will be
able to operate any bands with a scratchy signal and tell the
complainers
to stick it where the sun doesn't shine.
2. Blatantly hilarious and unusual commentaries on life as a radio
hobbyist.
3. No boring propagation charts. We replaced those with "Radio
Horoscopes".
4. No articles for home-brewing outrageous tri-banders and RF amps.
Just
step-by-step guides on how to build contraptions like a
"rubber-duckie
plane" for your HT and how to clean nasty things out of your
microphone.
5. Wacky contests where you can win antennas, free chunks of used
RG-58
and other prizes.
6. Free classifieds for paid subscribers.

7. We don't make you feel inferior if you work channel 19.
8. Hey.. we're writing it, so why aren't you reading it?
9. FBOM is 100% biodegradable and fat-free!
10. No test is required for this upgrade.

Why YOU should subscribe to FBOM Magazine NOW:

Rates are CHEAP! 2-year (4 issues) subscription rate of $9. 1-year subscription rate (2 issues) for $5.

For only $9 you can have 4 issues of FBOM Magazine delivered to you. Hey
that's a pretty good deal--especially for a publisher that is terribly desperate to gain more subscribers!

How you can give us your hard-earned money:

*
* Mail a check or money order for a 1 or 2 year subscription to
* "Eric Bond" (That's me, the publisher and janitor) and send it
* to FBOM Magazine, P.O. Box 7711, Westchester, IL 60154-7711.
*

(FBOM Magazine c1997)

To: Ham-Space@ucsd.edu

Ham-Space Digest Mon, 24 Feb 97 Volume 97 : Issue 65

Today's Topics:
NORAD Two-Line Orbital Element Sets (TLE952)
Support Little Leo instructions

Send Replies or notes for publication to: <Ham-Space@UCSD.Edu>
Send subscription requests to: <Ham-Space-REQUEST@UCSD.Edu>
Problems you can't solve otherwise to brian@ucsd.edu.

Archives of past issues of the Ham-Space Digest are available
(by FTP only) from ftp.UCSD.Edu in directory "mailarchives/ham-space".

We trust that readers are intelligent enough to realize that all text
herein consists of personal comments and does not represent the official
policies or positions of any party. Your mileage may vary. So there.

Date: 24 Feb 1997 23:08:20 GMT
From: tkelso@afit.af.mil (TS Kelso)
Subject: NORAD Two-Line Orbital Element Sets (TLE952)

The most current orbital elements from the NORAD two-line element sets are
carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are
also available on this system.

Element sets (also updated daily) and some documentation and software are
available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the
directory pub/space.

As a service to the satellite user community, the most current of these
elements are uploaded weekly to sci.space.news and rec.radio.amateur.space.
This week's elements are provided below.

****

- Current Two-Line Element Sets #952 -

Hi Mark,

I bought my 726r one year ago for $600.00. It was in perfect condition less the sat. bd.

Hope this helps....

Chuck, WD8DTH, NNN0XEX-MI

Bad idea, he has the right to post lets just stop responding.

> Thoughts?

Yes, let's start a club and join each other in solidarity to NOT respond
to Burt Fisher ANYMORE.

I Tim Hynde pledge to never respond to Burt Fisher in a PUBLIC forum
again.
Any takers? I'll be number one, e-mail me your call for an official
"Stop Burt Fisher" club I.D number.

Hello
I am seeking info on constructing a small (3-4 ft.) dish antenna for
weather satellites. Any sources of info greatly appreciated.

please reply direct to :
jkktl@aol.com

tnx!

^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^

This is the ONLY tried and true way to deal with people like Burt
who's sole interest in public forums is trolling for flames. This is
how they get their kicks. The hotter the responses, the better they
like it.

719. Amateur space station

Newsgroup: rec.radio.amateur.space
Date: 1997-02-25 00:00:00 UTC
From: William Nolle <wa8inz@concentric.net>
Message-ID: <33135390.75EA@concentric.net>
Source record: 19681

Does anybody know the latest FCC rules on Amatuer Space Stations?.
I read the FCC part 97 subsection 97.207 that deals with this subject,
but i know i have read someplace that there are exemptions to this
section. The NASA HAL5 group will launch the first amateur rocket into
space and it will carry transmitting equipment, but of course will only
be in space for 150 or so seconds. This flight is planned for the
summer and the FCC part 97 requires a 27 month advanced notification.

Bill WA8INZ

Bob Winingham wrote:

> I think you can get three down converters for the price of
> one 2.4 Ghz module

The last price I heard for the 2.4GHz module was $1800....
outrageously expensive. Its output power was 1 watt. One nice
thing you could do with it (as with all the bands) was the rig
would apply 12V to the coax to run a mast mounted pre-amp and
it was properly sequenced.

I'm not sure that IC-970A/H is out of production or if ICOM just
stopped exporting it to the US.

If there are any more questions, e-mail me directly as I have one
with most of the options except 2.4GHz. :-)

722. Which TNC for PacSats???

Newsgroup: rec.radio.amateur.space
Date: 1997-02-25 00:00:00 UTC
From: Mark Fossum <n0nsv@amsat.org>
Message-ID: <331367CD.2686@amsat.org>
Source record: 19684

I'm ready to induluge in the world of Packet Satellites. Keeping in mind that I'm a total beginner to this mode (PacSats, not Satellites) I'm seeking the opinions of those of you already working the digital birds.

I've enlisted the help of a couple of semi-local Elmers that feel the KPC-9612 is a good starter for the 9600 digital birds. Although it won't work all of the other modes, most of my Elmers say that once I work the 9600 birds, I won't want to mess with the slower ones.

Currently, I'm operating a Yaesu FT-736, AEA Satellite Trackbox, Yaesu G5400b Rotor, 2m & 70cm Preamps and antennas for 2m, 70cm & 2.4gig. I've been using Nova for Windows but it currently isn't being offered with a tuner so I'll probably call AMSAT and get a copy of WiSP for the automated tracking/tuning.

What do you think? Have you got any suggestions for me?

Mark Fossum - N0NSV

STSPLUS is one of the best around. I think it's the best anyway. There are other great programs as well. Check the amateur satellite web sites for the others.

It is your right to pass or not pass as you see fit. In general I agree with you Burt looks much worse for his posts. However if a sysop chooses not to pass anti ham propaganda that too is his right. After all you guys supply the time, equipment, location and expertise we all enjoy thus it is your foot ball and you make the rules. Most reasonable

people would accept this but then Burt is not reasonable.

My answer might be *slightly* biased since we produce it :-) but the best
tracking software is LogSat Professional for Windows. You can preview it at
http://www.logsat.com.

And thus the greatest way to hurt me if you think I am a fool is not to
censor me but to let me be heard, as you have done.
You have decency even if you think me a fool.

Mark,

Sounds like a good plan. Other possibilites include getting a G3RUH modem to use with a TAPR clone, or something like an AEA DSP-2232, _not_ the DSP-232. AEA is out of business, but the 2232 is a good performer on both 9600, 1200, and 400 baud (P3D) tlm, plus all the usual other modes. One used, or a new one on closeout would be a good purchase. The same for a used DSP-12. TAPR/AMSAT also have the DSP-93, which is a neat box with ongoing software development. If I were starting fresh today, that is what I would use.

BTW, you will need WISP. It will not only drive the tracking and tuning, but it also handles all the message details. And of course it helps support the P3D effort.

Alan

Good insights but why still play the role of a victim? To be liberated
from your past, you have to LET IT GO. Ten years from now, you'll hate
who you are today. There is no peace or healing going on when you
despise anything, past, present, or future. Its all INSIDE you - what
isn't there to love?

Peace and healing come with acceptance and forgiveness. Then you can love
instead of hate. Much better use of energy. In fact, the sensation is
that it takes no energy. What we resist (the pain of not loving) persists.

73,

John/WD1V

> I think you can get three down converters for the price of
> one 2.4 Ghz module

The last price I heard for the 2.4GHz module was $1800....
outrageously expensive. Its output power was 1 watt. One nice
thing you could do with it (as with all the bands) was the rig
would apply 12V to the coax to run a mast mounted pre-amp and
it was properly sequenced.

I'm not sure that IC-970A/H is out of production or if ICOM just
stopped exporting it to the US.

If there are any more questions, e-mail me directly as I have one
with most of the options except 2.4GHz. :-)

Hi Mark,

I bought my 726r one year ago for $600.00. It was in perfect condition
less the sat. bd.

Hope this helps....

Subject: Which TNC for PacSats???

I'm ready to induluge in the world of Packet Satellites. Keeping in mind
that I'm a total beginner to this mode (PacSats, not Satellites) I'm
seeking the opinions of those of you already working the digital birds.

I've enlisted the help of a couple of semi-local Elmers that feel the
KPC-9612 is a good starter for the 9600 digital birds. Although it won't

work all of the other modes, most of my Elmers say that once I work the 9600 birds, I won't want to mess with the slower ones.

Currently, I'm operating a Yaesu FT-736, AEA Satellite Trackbox, Yaesu G5400b Rotor, 2m & 70cm Preamps and antennas for 2m, 70cm & 2.4gig. I've been using Nova for Windows but it currently isn't being offered with a tuner so I'll probably call AMSAT and get a copy of WiSP for the automated tracking/tuning.

What do you think? Have you got any suggestions for me?

Subject: Which TNC for PacSats???

Mark,

Sounds like a good plan. Other possibilites include getting a G3RUH modem to use with a TAPR clone, or something like an AEA DSP-2232, _not_ the DSP-232. AEA is out of business, but the 2232 is a good performer on both 9600, 1200, and 400 baud (P3D) tlm, plus all the usual other modes. One used, or a new one on closeout would be a good purchase. The same for a used DSP-12. TAPR/AMSAT also have the DSP-93, which is a neat box with ongoing software development. If I were starting fresh today, that is what I would use.

BTW, you will need WISP. It will not only drive the tracking and tuning, but it also handles all the message details. And of course it helps support the P3D effort.

737. Mir Information and Prediction

Newsgroup: rec.radio.amateur.space
Date: 1997-02-26 00:00:00 UTC
From: Kees Leune <s722413@kub.nl>
Message-ID: <5f1fq1$mnm@mailnews.kub.nl>
Source record: 19691

I have put up a Web page which contains information regarding ham activities on board space station Mir. The information you will find there deals with mainly with the frequencies used by the crew. Another, much more interesting possibility is the realtime creatings of predictions of passes over YOUR area.

By filling in your IARU qth locator and your locator UTC time offset, you will get a tailor made prediction which tells you exactly when the station will be in reach so that you can give it a go.

The URL:

http://stuwww.kub.nl/~pe1rhp

The server is located in the Netherlands (JO21MN) and optionally fetches information from Germany. More information will be put up on a later time.

I'm looking forward to any reactions you might have!

According to my dictionary:
PUERILE
1. Belonging to childhood; juvenile.
2. Immature; childish. See Synonyms at young. [Latin *puerlis*, from puer,
child, boy.] • puerilely adv. •puerility or puerileness n.

People,
You are missing the point! The object of newsgroups is the free exchange of ideas and information, just like ham radio is supposed to be enjoyed. Not by ignoring peoples views just because you don't agree with them. That is what makes the United States of America GREAT!
Not censorship!
You don't like don't logon or turn off your radio.

>It is your right to pass or not pass as you see fit. In general I agree
>with you Burt looks much worse for his posts. However if a sysop
>chooses not to pass anti ham propaganda that too is his right. After

Correct. I agree with and support this right. However, just because
you have a "right" does not mean you have to exercise it. After all,
you have a "right" to make a fool of yourself, too. Remember, power
corrupts, and once you start censoring what goes through your BBS,
you'll find all sorts of excuses to filter out anything that annoys
you.

>all you guys supply the time, equipment, location and expertise we all
>enjoy thus it is your foot ball and you make the rules. Most reasonable
>people would accept this but then Burt is not reasonable.

And if all the Sysops who find various things unreasonable start
killing them, the network collapses. If you don't want to be part of
a free-flowing information net, then you have no business setting up a
BBS on such a net. Put your little up-tight closed BBS off on some
peripheral channel, and lock out folks to your heart's content.

I repeat: It's legal to lock out folks like Burt (or me - it's
happened more than once) but it's not ethical, nor is it in the spirit
of Amateur Radio. It's hard to overemphasize the importance of this
principle.

Hint: How far do you think the Internet would have grown if it
catered to the same sort of censorship that some hams practice?

742. Who did I hear on 130.165 MHz?

Newsgroup: rec.radio.amateur.space
Date: 1997-02-26 00:00:00 UTC
From: John Charles <jaycee@midmarsh.demon.co.uk>
Message-ID: <sQELBBAC6JFzEwIi@midmarsh.demon.co.uk>
Source record: 19696

For the first time I picked up some voice traffic on 130.165 MHz this afternoon, best reception here being 130.1625 MHz presumably due to the Doppler shift.

It sounded like an American accent and he was talking about how it felt to be wearing a mask overnight. It certainly wasn't the usual voice I've heard on 145.800 MHz in the past.

I'm wondering who I heard and to whom he could have been talking on that frequency as my listings show it as Shuttle to Mir traffic. I could only pick up one side of the conversation. Mir was passing over at the time.

BURT, I sorta hate to burst your bubble, but your steady flow of BS has
been steadily rejected on the packet network - what makes you think your
presence one either Internet or the ham bands is likely to be any more
successful? Do you often trip over your own ego and hurt yourself?

I use Netscape and it's newsreader. Is there anyway that I can filter
out certain subjects/individuals from having them show up in my reader.
If not can you reccomend a news reader that has this facility.

I am not denying individual's right to blow hot air. As far as I am
concerned, their argument is lost at the outset by posting it to an
inappropriate news group anyway. This last posting reminds me of "Oh you
are so good at milking cows. I wish I could do it as well as you do."
The only problem is someone doesn't know a cow from an ass.

Thank you for your help with ther news reader.

Sounds like you have the U.S. Post Office and ham radio confused.
The big problem with the packet network is sysops who don't pay
attention, forward anything to anywhere, loose mail by letting things
sit on their system forever, etc. Running a BBS is something that
requires a) time and b) effort, and too many packet BBS's consist
of a TNC, a radio, a computer with BBS software that somebody's
buddy set up, and a ham running around patting himself on the back
calling himself a 'sysop'.

>If you're not part of an open network, you're just cluttering up
>valuable space on the bands, and are giving jerks like Burt more
>ammunition.

I think you have that backwards, too. I don't know who the first two hams were who hooked up TNC's and BBS software, but I imagine that the intent of the first link of the 'packet network' was to forward information, not garbage. Keeping the network free of garbage reserves valuable space for valid information to be passed.

The amateur packet radio network already forwards, by design, an incredible amount of garbage in the form of message headers. I don't recall the exact figure, but a few years ago I analyzed a months worth of ALLUS bulletins, and I think that headers accounted for between 40 and 50 percent of the total character count. Add to that garbage a totally unnecessary ASCII drawing at the end of every message, a few lines of advertising from the guy who wrote the whiz bang terminal program used to generate the message, and top it off with an ACK at the end so the receiving system generates a totally unnecessary return message saying the mail got there, and you run the percentage of garbage up well over 50%. The packet network does a wonderful job of diseminating garbage, but unfortunaly falls flat on it's face when it comes to delivering mail from one ham to another ham.

I agree one hundred percent with Steve. I supplied the two computers, three radios, three TNC's, assorted power supplies, cables, antennas, etc. that are used to run my packet BBS and DX cluster. I pay the electric bill every month. When the little red transmit light on one of my packet radios turns on, I decided what gets transmitted, and it damn sure won't be Bubble Head's Bible Quotes or daily birthday lists from the Happy Club. Steve chooses to keep certain people off his system. I choose to keep certain garbage off my system. We are both doing what we are supposed to be doing, monitoring and eliminating garbage.

My packet equipment isn't a 'public service'. It's a service provided for hams to use in relation to ham radio. Bible banging and birthday lists have nothing to do with ham radio, so I make the decision to keep that junk off my system, and not contribute to the confusion by sending it to other systems.

When you, TAPR, or the ARRL decide you would like to reimburse me for the cost of my equipment and start sending me a paycheck, I will be happy to revert to your system of not excluding anything from my BBS.

By the way, Burt's messages pass freely thru my BBS, as his topic of discussion always seems to be ham radio related.

I think we have found the problem here, Glen. You don't seem to have
a firm grasp of the definition of the word 'network'. Networks don't
collapse from lack of traffic, they just move the existing traffic much
faster.

Hams are so brave with insults, from a distance.
I receive many packet messages of support, would you like to see some?
I figured hams could not think fast enough to engage me in a live
discussion,
so far after years on here I have been unable to get on on the air with
one to do so.

I will easily win any discussion because I have the facts and I engage
students saily, they are far more challenging than most any ham could
be.

761. Receiver- kit for Weather Sat's (2)

Newsgroup: rec.radio.amateur.space
Date: 1997-02-27 00:00:00 UTC
From: abom@iaehv.nl
Message-ID: <3315dc23.1115691@news.iaehv.nl>
Source record: 19713

Receiver- kit for Weather Sat's (2)

Dear weathersatellite- fan,

A few weeks ago I announced a weathersatellite receiver- kit.
The necessary zip- file for building the receiver can be found on the
url of the technical university of Eindhoven in the Netherlands. The
URL- address is:
ftp://ftp.esrac.ele.tue.nl/pub/ham/wefaxreceiver-kit.
The VHF2_10.zip -file of about 125kb contains the next files:

VHF2.plt The complete schematic of the receiver in HPGL- format
VHF2.par The complete partslist of the receiver in ASCI- format
VHF2t.tif The topside of the PCB in TIF- format
VHF2b.tif The bottomside of the PCB in TIF-format
VHF2c.tif The componentlayer of the PCB in TIF- format
README.txt Some background information.

In about 4- 6 weeks a nice glass epoxy print with silkscreen lettering
will be available.
If you want to make the PCB yourself, you can start immediately with
copying the top and bottom layers to transparent sheets.
On this moment the assembly- instructionsheet is being prepared and
will be send as an attached .txt- file to those who are going to
build the receiver.
For changes that are essential for the design, I will direct- mail the
WX- receiver builders.

Important design changes will result in a new VHF2_X0.zip file.
Small design changes will result in a new VHF2_1X. zip file.

Remarks before building your own Wefax- receiver:

Keep in mind that building a receiver is not just a matter of placing
the right components in the right holes. The receiver should be
adjusted for optimum results.

After that I designed last year the Wefax- receiver it's now for me a
challenge to help others in building the receiver via the internet-
possibility and to help them in getting good results with "normal"
components and limited measurement- means. Further I hope to receive
sufficient feedback for possible new receiverextensions , like PC-
operation, synthesizer and scan-possibility, this could lead to a
new and more advanced design.

For more details, questions or problems during assembling your
receiver, you can contact me via E-mail : abom@iaehv.nl or

pa0axb@amsat.org.

Succes in building your own Wefax- receiver!!!!

A popular quote used on the ham bands when faced with malicious QRM and vocal vandals, is "don't feed the animals". With that view in mind, this will be my last post on THIS subject. I really don't expect to see any logical debate flowing from the likes of burt, who could EASILY sail around the world in his own wind powered sailboat - but regardless of my own personal failings, I have YET felt the lonliness and need to advertise on Internet in an effort to find someone who will talk to me on the radio. Party on, Burt dude....

Yes, those are wasteful. But that's a separate issue, unless you
decide that you aren't going to forward anything by anyone who uses
ASCII in his signature.

>network does a wonderful job of diseminating garbage, but unfortunaly
>falls flat on it's face when it comes to delivering mail from one ham to
>another ham.

That's why we have the Post Office and the telephone. Of course, if
sysops were doing their job instead of worrying about censorship and
power trips, it'd work a lot better. In fact, it DID work better
several years ago than it does now.

>I agree one hundred percent with Steve. I supplied the two computers,
>three radios, three TNC's, assorted power supplies, cables, antennas,

Don't teach your grandmother to suck eggs. I've done all that stuff,
and more.

>electric bill every month. When the little red transmit light on one of
>my packet radios turns on, I decided what gets transmitted, and it damn
>sure won't be Bubble Head's Bible Quotes or daily birthday lists from
>the Happy Club. Steve chooses to keep certain people off his system.
>I choose to keep certain garbage off my system. We are both doing
>what we are supposed to be doing, monitoring and eliminating garbage.

You're both part of the problem, not part of the solution. You have
no business setting yourselves up as arbiters of what's garbage and
what isn't. If everybody did that, there'd BE no packet network. If
you want a closed net, be my guest. Forward to *each other*, sans
"garbage." But don't pretend to be part of an open, global BBS
network, because that is NOT in the spirit of Amateur Radio.

>My packet equipment isn't a 'public service'. It's a service provided for
>hams to use in relation to ham radio. Bible banging and birthday lists

No, it's an ego trip that allows you to force your decisions of what's
"right" or "wrong" on your fellow hams.

>have nothing to do with ham radio, so I make the decision to keep that
>junk off my system, and not contribute to the confusion by sending it
>to other systems.

You're a disgrace to good sysops everywhere.

>When you, TAPR, or the ARRL decide you would like to reimburse me for
>the cost of my equipment and start sending me a paycheck, I will be
>happy to revert to your system of not excluding anything from my BBS.

When folks like Burt get their way, thanks in large part to attitudes
like yours, I hope you'll be very happy with your commercial station.
Of course, if you had to compete with commercial stations, you'd be
out of business in a week, since the real world has little tolerance
for censorship and ego trips.

O. I C. The packet 'network' isn't for forwarding mail from one ham to another.
It's a digital soapbox for Bible Bangers and Birthday Clubs. Thanks for letting
me in on that secret. Next time I see someone put NTS traffic or a personal
message on the BBS here, I'll kill it and tell them to use the telephone.

You appear to be of the 'forward it anywhere and my job is done' mentality.
No wonder you'd rather forward bulletins than personal mail. ANYPLACE
is the right place to forward a bulletin. Personal mail requires a bit of
work .....

>Don't teach your grandmother to suck eggs. I've done all that stuff,
>and more.

Well, since you have already taught your grandmother to suck eggs,
I guess we can have her teach mine, but if you want your grandmother
to teach my grandmother to do anything, tell her to bring a shovel, cuz
she's gonna have to dig my grandmother up before she can start class.

>You're both part of the problem, not part of the solution. You have

>network, because that is NOT in the spirit of Amateur Radio.

There is no such thing as a global Amateur Radio BBS network. There
never has been, and there never will be. Unless, perhaps, if you define
'global' as a hundred miles in any direction of your house. Most of us
who don't live in the United States Of Drug Dealers use the word
'global' to mean the ENTIRE world, not just the little part that you live
in. If you have fooled yourself into thinking there is a 'global' packet
network, send me a packet message with your phone number in it and I'll call you
when it gets here: KH2D@KH2D.GUAM.USA.OC

Don't bother staying up late waiting for me to call.....

>>My packet equipment isn't a 'public service'. It's a service provided for
>>hams to use in relation to ham radio.

>No, it's an ego trip that allows you to force your decisions of what's

Now I'm on an ego trip. OK. Didn't you just tell me "Don't teach your
grandmother to suck eggs. I've done all that stuff, and more. "

>When folks like Burt get their way, thanks in large part to attitudes
>like yours, I hope you'll be very happy with your commercial station.
>Of course, if you had to compete with commercial stations, you'd be
>out of business in a week, since the real world has little tolerance
>for censorship and ego trips.

You lost me a bit here, I'm not sure what 'Burt's Way' is, I thought this
discussion originated because you were upset with the fact that Burt's
mail was being kept off Steve's system. I'm not here to compete with
commercial stations. I'm here to enjoy ham radio. But you're right.
Nobody gets fired when the operator of an Amatuer Packet Radio BBS
runs around patting himself on the back yelling 'I'm a SYSOP ! I'm a SYSOP !"

while the mail is getting forwarded to La La Land. And judging from
the amount of mail that goes to La La Land, it's a good thing, because
a lot of 'sysops' would be out of a job.

Subject: Receiver- kit for Weather Sat's (2)

Receiver- kit for Weather Sat's (2)

Dear weathersatellite- fan,

A few weeks ago I announced a weathersatellite receiver- kit.
The necessary zip- file for building the receiver can be found on the
url of the technical university of Eindhoven in the Netherlands. The
URL- address is:
ftp://ftp.esrac.ele.tue.nl/pub/ham/wefaxreceiver-kit.
The VHF2_10.zip -file of about 125kb contains the next files:

VHF2.plt The complete schematic of the receiver in HPGL- format
VHF2.par The complete partslist of the receiver in ASCI- format
VHF2t.tif The topside of the PCB in TIF- format
VHF2b.tif The bottomside of the PCB in TIF-format
VHF2c.tif The componentlayer of the PCB in TIF- format
README.txt Some background information.

In about 4- 6 weeks a nice glass epoxy print with silkscreen lettering
will be available.
If you want to make the PCB yourself, you can start immediately with
copying the top and bottom layers to transparent sheets.
On this moment the assembly- instructionsheet is being prepared and
will be send as an attached .txt- file to those who are going to

build the receiver.
For changes that are essential for the design, I will direct- mail the
WX- receiver builders.

Important design changes will result in a new VHF2_X0.zip file.
Small design changes will result in a new VHF2_1X. zip file.

Remarks before building your own Wefax- receiver:

Keep in mind that building a receiver is not just a matter of placing
the right components in the right holes. The receiver should be
adjusted for optimum results.

After that I designed last year the Wefax- receiver its now for me a
challenge to help others in building the receiver via the internet-
possibility and to help them in getting good results with normal
components and limited measurement- means. Further I hope to receive
sufficient feedback for possible new receiverextensions , like PC-
operation, synthesizer and scan-possibility, this could lead to a
new and more advanced design.

For more details, questions or problems during assembling your
receiver, you can contact me via E-mail : abom@iaehv.nl or
pa0axb@amsat.org.

Succes in building your own Wefax- receiver!!!!

From: John Charles <jaycee@midmarsh.demon.co.uk>
Subject: Who did I hear on 130.165 MHz?

For the first time I picked up some voice traffic on 130.165 MHz this afternoon, best reception here being 130.1625 MHz presumably due to the Doppler shift.

It sounded like an American accent and he was talking about how it felt to be wearing a mask overnight. It certainly wasn't the usual voice I've heard on 145.800 MHz in the past.

I'm wondering who I heard and to whom he could have been talking on that frequency as my listings show it as Shuttle to Mir traffic. I could only pick up one side of the conversation. Mir was passing over at the time.

Hi All!

Can someone tell me the name of the program that you can grab the APT signal from the NOAA birds and convert it to the pic via the soundcard inputs?

Is there a program that will do the same for FAX and CW ect. from the Shortwave?

Can you pass on the location where I can grab them or if there is a nice person out there that can UUECODE them to my address if possible. I'd appreciate the help. Thanks..

775. WeFAX APT

Newsgroup: rec.radio.amateur.space
Date: 1997-02-28 00:00:00 UTC
From: Rafael Garcia <rgarcia@sat.cide.upm.es>
Message-ID: <331720E2.5072FC07@sat.cide.upm.es>
Source record: 19629

Hi all,

I'm in the process to setup a station capable of WEFAX APT image receiving, at the 137 MHz band. But I have a doubt about what is the right receiver choice. I know that APT transmision is in FM mode, with the FAX signal AM modulated. The problem is if with a simple modified transceiver (TS-790, IC-821) for that band will be enough. In fact, the question: is it enough FM narrow (5 kHz voice channel) to get the data?

I've got a DSP-2232 multi-mode controller and IC-821. The software is something called "wefax256" by AEA. I have had unsuccesful results with that software, and I'm thinking in JVFAX or the like, with serial input.

I'll appreciate any input about this.
Thanks in advance,

Burt,

It's my opinion that you go looking for trouble. You know what they say
about looking for trouble? You find it every time!! Hee hee!

As far as feeling superior to most Amateurs. That's really nice!
I'm glad you feel that way.

I remember getting into it with you over on the Relaynet years ago. You
were giving me the gears for sending out a general message of thanks to
all that replied to one of my polls. At the time I didn't realize that
it meant so much to you. I still don't understand why!

I don't know what you are trying to prove. Your message isn't clear.
Who was it that said Communication without intelligence is pointless?

Cheers!

SB SPACE ARL ARLS004
ARLS004 AMSAT scrambling to close funding gap

The AMSAT-NA Phase 3D fund-raising campaign is at minus 150,000 dollar(s) and
counting--and that's assuming the launch goes off on schedule this
summer. At the end of 1996, AMSAT-NA figured it needed another
200,000 dollar(s) to finish the project. The latest AMSAT-NA fund campaign
has, so far, netted an additional 50,000, dollar(s) according to AMSAT-NA
Executive Vice President Keith Baker, KB1SF. ''Barring unforeseen
problems from now until launch, and assuming the early July launch
date holds, that puts us still short of funds by about 150,000,''
Baker dollar(s) said this week. ''We're still not out of the woods yet, but
we're getting close.''

But the AMSAT-NA shortfall is only part of the total Phase 3D
funding picture. Baker also says that AMSAT-DL (Germany)--which, so
far, has invested nearly 2 dollar(s) million in Phase 3D compared to nearly
1 dollar(s).4 million for AMSAT-NA--reports it still needs in the vicinity of
100,000 dollar(s) to complete its share of the Phase 3D effort.

Baker said AMSAT is on target to meet the July 8 or July 9 schedule,
which is still the official European Space Agency launch date for
the Ariane 502 rocket.

Baker said work on the satellite is moving along swiftly, and most
of the remaining electronic modules, antennas and other pieces of
the satellite are now at the Phase 3D Integration Lab in Orlando,
Florida. ''This week, a number of our Japanese and European builders
will also be in Orlando, along with several of their American
counterparts, to begin the 'final-final' installation and test of
antennas as well as integration into the satellite and testing of RF
and the remaining equipment modules,'' he said. ''They'll roll up
their shirtsleeves to get the work done.'' That phase of the job

will continue through March. Environmental testing of the satellite is slated to begin in mid-April.

The schedule is a tight one, right up until launch time. AMSAT anticipates the satellite will be shipped to Kourou, French Guyana, sometime in early May for final checkout, followed by integration with the Ariane 5 rocket in mid to late June.

''Needless to say, it is a very busy (and exciting) time for all of us.'' Baker said.

A series of pictures of Phase 3D work in progress is available via the AMSAT-NA Web site at http://www.amsat.org. Depending on its workload, the integration team hopes to be able to update these photos as work progresses.

SB SPACE ARL ARLS005
ARLS005 School contacts a go in wake of Mir fire

A ham radio contact between ham-Astronaut Jerry Linenger, KC5HBR, aboard the Russian Mir space station, and pupils at an elementary school in Michigan went off on schedule February 27, unaffected by a fire aboard Mir a few days earlier. Linenger, a physician, reported no injuries and all crew members in good health following the incident on February 24. A problem with an oxygen-generating device on Mir set off fire alarms and caused minor damage from excessive heat rather than from open flame.

The Mir fire was a popular topic as pupils at Charlevoix Elementary School in Michigan, spoke with Linenger Thursday morning. A crowd of 320, including reporters from four television stations and three newspapers, was on hand as 15 Charlevoix pupils spent ten minutes talking with Mir. The operator was Craig Stewart, KB8KPV. Regarding onboard emergencies, Linenger told the pupils that there is a crew return vehicle on each end of Mir, if something goes wrong, and he assured the youngsters that everything is fine now. He also mentioned that he misses pretzels and now eats about one-half Russian and one-half American food. ''The students were all very excited and really enjoyed their contact,'' said Frank Bauer, KA3HDO, AMSAT vice president for manned space flight. Three schools in Texas hope to have a chance to talk with Linenger over the next few weeks.

The fire last Monday burned for about 90 seconds. The crew was exposed to heavy smoke for five to seven minutes and donned masks in response. Medical personnel directed the crew to wear goggles and masks until an analysis of the Mir atmosphere could be completed.

Lithium perchlorate candles are burned to generate supplemental oxygen when more than three people are on board the space station. The oxygen-generating candles usually burn for up to 20 minutes.

Russian officials believe the problem began when a crack in the oxygen generator's shell allowed the contents of the cartridge to leak into the hardware in which it was located. Crew members extinguished the fire with foam from three fire extinguishers.

The heat destroyed the hardware in which the candle was burning, as well as the panel covering the device. The crew also reported that the outer insulation layers on various cables were melted by the heat. Russian flight controllers say that all Mir systems continue to operate normally, however.

Other schools hoping to speak with Linenger via ham radio include Perryton High School, Perryton, Texas, on March 4, United South High School, Laredo, Texas, on March 11, Booker T. Washington High School, Houston, Texas, on March 17.

In addition to Linenger, the Mir crew members include Mir 22 cosmonauts Valery Korzun and Alexander Kaleri, Mir 23 cosmonauts Vasily Tsibliev and Alexander Lazutkin, and German researcher Reinhold Ewald, DL2MIR, representing the German space agency, DARA. Korzun, Kaleri and Ewald are scheduled to return to Earth on Sunday, March 2, wrapping up a six-month mission for Korzun and Kaleri and three weeks of scientific experiments for Ewald. Linenger will remain aboard Mir with Tsibliev and Lazutkin until mid-May.

Officials are evaluating possible impacts of the fire to the mission and its science activities, as technical experts at the Russian Mission Control Center investigate the incident. The burned panel and other materials may be returned to Earth with Korzun, Kaleri and Ewald on Sunday for further analysis.

I've just found an article from 1962 that documents Russian launches that ended in the death of their cosmonauts. It states that men were in space before the official time for Yuri and that the original 'first' woman into space died when her craft left the orbit. Does anybody know where I can find out more? Any conformations?

thanks

Read "Soviet Disasters", by James Oberg. This is a very authoritative
text of well researched Russian and Soviet history. There was at least
one Cosmonaut death in training prior to Gagarin's flight, but no human
was launched into space prior to Yuri Gagarin.

Hate to go against the grain on this thread... but... the current evaluation copy of LogSat will not allow you set your QTH!!!

IMHO, this is a very poor way of crippling an otherwise good program, in an effort to force a purchase. With this "crippleware", you can look at the pretty displays... but a TRUE evaluation is near impossible. (Unless you happen to have a station in the middle of the Atlantic ocean, where the coordinates are preset!)

My mention to this fact via email to LogSat Corporation brought a "that's the way it is, buy it if you want to set your QTH... the full version works real well" response. Instead... I'm looking for alternatives. Again... IMHO!

Read "Soviet Disasters", by James Oberg. This is a very authoritative
text of well researched Russian and Soviet history. There was at least
one Cosmonaut death in training prior to Gagarin's flight, but no human
was launched into space prior to Yuri Gagarin.

Subject: Russians in space before Yuri????

I've just found an article from 1962 that documents Russian launches that
ended in the death of their cosmonauts. It states that men were in space
before the official time for Yuri and that the original 'first' woman into
space died when her craft left the orbit. Does anybody know where I can
find out more? Any conformations?

thanks

You'll need gzip.exe, available at the same site, to uncompress the file.

Try downloading the kep file from our site at
http://www.logsat.com/pub/Superkep.zip It has keps for a few thousands
satellites, including some military ones. You'll have to know what you're
looking for though, because a lot of them are identified only by numbers.

798. Q: R0MIR vs R0MIR-1 ?

Newsgroup: rec.radio.amateur.space
Date: 1997-03-02 00:00:00 UTC
From: brkille@mindspring.com
Message-ID: <5fctr0$2u@camel4.mindspring.com>
Source record: 19652

I have been listening to Mir again and have made voice and packet
contacts with the station several times in the past, but an old
question I have had has come up again. In packet mode I know
they usually have the PBBS running which is R0MIR-1, but I have
also seen connects to R0MIR. Today I connected to Mir using the
R0MIR call and got a greeting "Hello from the Mir crew", but lost
contact before I could tell if anything else was going to happen.
Is R0MIR just like my home packet call, which if someone connects
to me they just get a connect message and nothing else unless I
am at the keys? This would seem to make sence, but I just would
like this confirmed. Due to the short duration of the passes and the
QRM, both from other stations trying to work Mir and regular packet
traffic, it seems very hard at best to use the PBBS, most of the time
all I get is R0MIR-1 busy. I know there has been increased voice
activity lately but, I havent been listening at the right times I
guess. The next shuttle mission will be a SAREX mission so maybe
I will get lucky and make yet another shuttle contact. Thanks for
any comments or information on the Mir packet configuration.

>> schedule that they follow to turn it on. Let us know.

I looked at the schedule a month ago. FO-29 has been changing modes every Friday between 0000 or 0100 UTC. That's Thursday afternoon/evening in the U.S. The general rotation is Analog (JA), 1200 bps PSK, 9600 bps PSK, and then back to Analog.

It will next be in analog mode for one week starting on 14 March 97. There is also a test of the digi-talker scheduled for 28 March 97 at 10:45 UTC going through 1 April 97 at 00:30, when it switches to 9600. I don't have the schedule after that, so I don't know if the Friday UTC rotation will continue.

You'll find FO-29 much like FO-20, but with a stronger and more consistent signal.

73,
Peter - KD7MW

Dear Friends,

Maha Communications is a rapid growing company, and we are looking for
sales specialist!

1. Sales Specialist
Speak Fluent English
Some technical background of two-way/ham radio
Willing to take the challenge
Speak/Write Spanish (OPTIONAL)

Our company production lines include: Battery Pack,
Speaker/microphone,
R.F. Amplifier, Antenna, and accessories. Please visit
http://www.maha-comm.com/ for detail information on our products.

We are located at Brea, Southern California, in Orange County. If you
are interested in this job, please send e-mail to sales@maha-comm.com

Any conformations?

Those stories resurface periodically (particularly on the internet!),
and appear to be just that - stories. There doesn't seem to be any
credible evidence of a pre-Gagarin manned flight, nor is there any of a
"first female" flight ending in disaster. The Soviets did launch living
things into space before manned capsules were lofted. Some of the
"payloads" did have names (as did US chimp-o-nauts), which may have led
to speculation about crews. Things so often get lost in translation!

<snip>

> I'm looking for alternatives. Again... IMHO!

Try "Wisp", a great Windows (both 16 and 32 bit available) package
available for trial from AMSAT (ftp.amsat.org). The demo version is
fully functional and does a great job all-around (it's especially handy
for microsat ops). For a nominal fee (which supports AMSAT directly),
you can register and get rid of a small nag screen on start-up.

Low- to medium-gain vertical omni works quite well. I have even used a
discone with 35W output. Better not to have too much gain on the omni,
as it reduces effectiveness at higher elevation passes.

5kHz is not nearly wide enough. You need 50kHz, though some people claim the 40 kHz works OK for them. Most APT users seem to have special wxsat receivers made by Quorum, Spectrum (Timestep), etc. I use a Timestep receiver, demodulator board, and software.

>
> I've got a DSP-2232 multi-mode controller and IC-821. The software is

WEFAX generally refers to the fax images sent on HF frequencies. Here in the U.S., geostationary satellite images are rebroadcast on 8080 kHz (for example). I think that is what your AEA software is designed for. I use JVFAX myself with a Hamcomm interface to receive those images.

You can use JVFAX for the the 137-MHz satellite transmissions, but you'll need a more sophisticated demodulator than the Hamcomm circuit.

>
> I'll appreciate any input about this.
> Thanks in advance,
>
> --
> Rafael,
> Madrid (Spain)

I strongly recommend that you get a good book on the subject or find someone who is already experienced with APT if you want to get into receiving images directly from the satellites. A good book (in English) is the "Weather Satellite Handbook" by Ralph Taggart.

Good luck.

Rich

From: brunel@hugo.rz.fh-ulm.de
Message-ID: <brunel.244.0008D69C@hugo.rz.fh-ulm.de>
Source record: 19662

Hi folks,
on saturday (1st March) at approx. 18.00 utc I saw a bright object, moving very fast from sw to ne. It was nearly an overhead pass and while moving to northeast it became weaker and weaker. No sound of a plane and no flash-lights. First I thought it was the MIR space station which I saw many times before. But when I looked at sts- plus I noticed that the MIR passes over Germany had been in the afternoon. Of course there are lots of satellites in space but I have no idea which one is big enough to be visible from the earth.

R0MIR is the live keyboard. I have yet to see a live QSO over the Mir
keyboard though. Most of what's typed to it no doubt scrolls off the screen
pretty fast due to the PBBS usage.

Any conformations?

Those stories resurface periodically (particularly on the internet!),
and appear to be just that - stories. There doesn't seem to be any
credible evidence of a pre-Gagarin manned flight, nor is there any of a
"first female" flight ending in disaster. The Soviets did launch living
things into space before manned capsules were lofted. Some of the
"payloads" did have names (as did US chimp-o-nauts), which may have led
to speculation about crews. Things so often get lost in translation!

Try "Wisp", a great Windows (both 16 and 32 bit available) package
available for trial from AMSAT (ftp.amsat.org). The demo version is
fully functional and does a great job all-around (it's especially handy
for microsat ops). For a nominal fee (which supports AMSAT directly),
you can register and get rid of a small nag screen on start-up.

Aristides,

I am using a SQLOOP omni antenna and 80-100 watts. It seems to work well
during the entire pass.
It is well worth having a preamplifier for the 10 meter receiver since the
signals are rather weak.

Source record: 19577

Just heard the beacon from RS-16 this morning (~1915Z) a couple khz below
RS12's beacon. Very strong signal. Guess I missed the postings on this
new bird. I'll be looking for Kep's & freqs.

824. NORAD Two-Line Orbital Element Sets (TLE955)

Newsgroup: rec.radio.amateur.space
Date: 1997-03-04 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <5fi796$oo2@blackbird.afit.af.mil>
Source record: 19578

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

****

825. rs-16?

Newsgroup: rec.radio.amateur.space
Date: 1997-03-04 00:00:00 UTC
From: "William F. Erhardt" <erhardt@mt.net>
Message-ID: <01bc28ea$85ce9d60$5e427fce@default>
Source record: 19579

Howdy from Helena, Montana (Bill KA7YA0) and I copied the following today
on 29.408 four different passes:

rs-16 p167 o206 n50 m12 l17 k92 j0 e1 h2 g0 f164 e9 d14 c6 b9 a9 rs-16

Could sure use some keps for this new bird.

Bill

826. NORAD Two-Line Orbital Element Set Format

Newsgroup: rec.radio.amateur.space
Date: 1997-03-04 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <5fi7d5$oog@blackbird.afit.af.mil>
Source record: 19580

As a service to the satellite user community, the following description of the NORAD two-line orbital element set format is uploaded to sci.space.news and rec.radio.amateur.space on a monthly basis. The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW,

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system. In addition, element sets (updated daily) and some documentation and software are also available via anonymous ftp from

archive.afit.af.mil (129.92.1.66)

in the directory pub/space.

==========

Data for each satellite consists of three lines in the following format:

```
AAAAAAAAAAAAAAAAAAAAA
1 NNNNNU NNNNNAAA NNNNN.NNNNNNNN +.NNNNNNNN +NNNNN-N +NNNNN-N N NNNNN
2 NNNNN NNN.NNNN NNN.NNNN NNNNNNN NNN.NNNN NNN.NNNN NN.NNNNNNNNNNNNN
```

Line 0 is a twenty-two-character name (this change is being made to be consistent with the name length in the NORAD SATCAT).

Lines 1 and 2 are the standard Two-Line Orbital Element Set Format identical to that used by NORAD and NASA. The format description is:

```
Line 1
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
10-11 International Designator (Last two digits of launch year)
12-14 International Designator (Launch number of the year)
15-17 International Designator (Piece of launch)
19-20 Epoch Year (Last two digits of year)
21-32 Epoch (Julian Day and fractional portion of the day)
34-43 First Time Derivative of the Mean Motion
or Ballistic Coefficient (Depending on ephemeris type)
45-52 Second Time Derivative of Mean Motion (decimal point assumed;
blank if N/A)
54-61 BSTAR drag term if GP4 general perturbation theory was used.
Otherwise, radiation pressure coefficient. (Decimal point assumed)
63-63 Ephemeris type
65-68 Element number
69-69 Check Sum (Modulo 10)
```

(Letters, blanks, periods, plus signs = 0; minus signs = 1)

Line 2
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
09-16 Inclination [Degrees]
18-25 Right Ascension of the Ascending Node [Degrees]
27-33 Eccentricity (decimal point assumed)
35-42 Argument of Perigee [Degrees]
44-51 Mean Anomaly [Degrees]
53-63 Mean Motion [Revs per day]
64-68 Revolution number at epoch [Revs]
69-69 Check Sum (Modulo 10)

All other columns are blank or fixed.

Example:

NOAA 6
1 11416U 86 50.28438588 0.00000140 67960-4 0 5293
2 11416 98.5105 69.3305 0012788 63.2828 296.9658 14.24899292346978

This website does not even suggest a proper exposure for Hale-Bopp. It is an advertisement. Can someone suggest an exposure/ASA for the comet? All we need is something to get started! Cliff Buttschardt K7RR

```

These were passed to me from Amast for the Zeya orbit with the rs-16 bird on the same launcher. They are preliminary as Amast will update when they firm things up.

Bill (KA7YAO)

832. Re: Hale-Bopp photo tips

Message-ID: <cochraneE6JvDy.9Mn@netcom.com>
Source record: 19586

Not true on both accounts. If you would have look there is a link
called Details which as the following info.

Photo #1

Comet Hale-Bopp taken 2/18/97, 4:55am PST in Ben Lomond, CA.
200mm f4.0 lens, Nikon F2 camera,
15 minute exposure on ASA 400 color print film (Kodak Gold 400).
The camera was piggybacked on a small Celestron telescope which
has a motorized equatorial mount. I tracked on the nucleus.

Photo #2

Comet Hale-Bopp taken 2/18/97, 5:20am PST in Ben Lomond, CA.
50mm f1.4 lens, Nikon F2 camera,
1 minute exposure on ASA 400 color print film (Kodak Gold 400).

I did not take the photos, a friend did.

The orginal post was an advertisment, not mine.

Regards,
Larry Cochrane
Redwood City Public Seismic Network
(a group of amateur seismologists, not a company that does advertizing)

Date: 4 Mar 1997 22:21:26 GMT
From: tkelso@afit.af.mil (TS Kelso)
Subject: NORAD Two-Line Orbital Element Sets (TLE955)

The most current orbital elements from the NORAD two-line element sets are
carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are
also available on this system.

Element sets (also updated daily) and some documentation and software are
available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the
directory pub/space.

As a service to the satellite user community, the most current of these
elements are uploaded weekly to sci.space.news and rec.radio.amateur.space.
This week's elements are provided below.

****

From: dbcntcas@teleport.com (Dave Bernhardt)
Subject: RS-16?

Just heard the beacon from RS-16 this morning (~1915Z) a couple khz below
RS12's beacon. Very strong signal. Guess I missed the postings on this
new bird. I'll be looking for Kep's & freqs.
de Dave, N7DB (CN85)

5kHz is not nearly wide enough. You need 50kHz, though some people claim
the 40 kHz works OK for them. Most APT users seem to have special wxsat
receivers made by Quorum, Spectrum (Timestep), etc. I use a Timestep
receiver, demodulator board, and software.

>

WEFAX generally refers to the fax images sent on HF frequencies. Here in
the U.S., geostationary satellite images are rebroadcast on 8080 kHz (for

example). I think that is what your AEA software is designed for. I use
JVFAX myself with a Hamcomm interface to receive those images.

You can use JVFAX for the the 137-MHz satellite transmissions, but you'll
need a more sophisticated demodulator than the Hamcomm circuit.

> Thanks in advance,
>
> --
> Rafael,
> Madrid (Spain)

I strongly recommend that you get a good book on the subject or find
someone who is already experienced with APT if you want to get into receiving
images directly from the satellites. A good book (in English) is the
"Weather Satellite Handbook" by Ralph Taggart.

Good luck.

Rich

This work has been going on at McDonald Observatory in west Texas (near Marfa) since the Apollo moon missions. The astronauts left arrays of corner reflectors at the landing sites. (I think one or more of the lunokhods also carried retroreflectors.)

Check out the amsat page at http://www.amsat.org.
They have pages for all current and planned satellites.

Matthew

There are better programs than WISP for tracking. WISP is really
intended for operating on the packet store and forward satellites.
WISP will also do station control.

For that purpose, it is great!

I would recommend contacting AMSAT and ask what they have available.
They had a really neat looking program out at the Miami Hamfest
for Windows 95.

I'm not sure why having the ability to do antenna work makes the program a compromise. Admittedly, I see little reason to maintain that feature in the program, but the simple solution is "don't use it."

What features (present or not) related to satellite tracking do you dislike about the program?

Regarding the demo - the old one let you set your QTH for an 'eval' period (30 days or something), then reset to default after that. Seems reasonable to me, unless they've changed since then. (Also, if you've installed the demo before, and your 'eval' period has elapsed, LogSat may make an entry in the Registry and not allow you to "re-evalutate" the program.)

I still believe that LogSat is the best form/function combination in Sat tracking software... But I'm open to comments on other apps.

SB SPACE ARL ARLS006
ARLS006 RS-16 Satellite In Orbit

According to sources at AMSAT, a new Russian Amateur Radio satellite, designated RS-16, has been launched from the Svobodny Cosmodrome as part of a Zeya satellite package. RS-16 reportedly has an average orbital altitude of 276 miles, producing a footprint some 2000 miles in diameter on Earth.

On March 4, 1997, 1614 UTC, Jim White, WD0E, reported hearing strong signals from the RS-16 CW beacon on 29.408 MHz. Others in the US and Europe have reported strong signals on 10 meters. The transponders are not yet active. The twice-delayed launch had been expected as early as December. RS-16 is expected to be a Mode A (2 meters up/10 meters down) satellite, like RS-10 and RS-15. It's the first Russian satellite to have a 70-cm beacon, but the beacon there is not yet operational. Beacon frequencies are 29.408, 29.451, 435.504 and 435.548 MHz.

When the transponders are operational, the RS-16 frequencies are expected to be: uplink, 145.915 to 145.948 MHz, downlink, 29.415 to 29.448 MHz. Orbital elements and additional information will be announced as they become available.

I heard it today. Very strong signal! I had a bit of a hard time copying
it though. RS-12 was up at the same time, and its beacon is also on 29.408.
You'd be amazed at what a KAM will spit out trying to decode two
simultaneous CW signals. :)

Notes:
. & hardware trouble, causing communication buffer overflow.
. local time = UT + 1 hour.

Maurice De Meyere

Location: Astronomical Observatory, University of Ghent, Belgium
(3 42' 32" E, 51 01' 25" N)
Antenna (2x): 4 elements horizontal Yagi, pointed East, elevation= 30 degs
Antenna amplifier: 10 dB gain
Frequency: (1)=66.29 MHz (signal) and (2)=65.3 MHz (interference control)
Receiver (2x): modified commercial FM receiver
Data acquisition: 12 bits PC-based A/D convertor, 250 Hz sampling rate
Interference rejection:
dual setup: receiver (1) tuned at distant transmitter, receiver (2)
tuned at empty frequency. Anti-coincidence measurement rejects
registration of broadbanded spurious signals (lightnings, computers,
ignition motors, etc).
Further information:
see WWW page (additional info + observational data)
http://allserv.rug.ac.be/~hdejongh/astro/meteor/meteor.html
Data format:
results are shown as total reflection time, expressed as
a percentage. The actual number shows 10 times this value.
When no figure is shown, the equipment was either out of service,
or results could have been affected by interference, sporadic E.

. nice observation of the Quadrantids maximum on Jan 3, around 11h UT.

Pierre De Groote / comments by Chris Steyaert

```
Observer: Werfried Kuneth
Location: Ferndorf, Austria (13 37' E, 46 45' N)
Antenna: 3 element Yagi, direction south
Receiver: AR-8000 at 53.7600 MHz, SSB mode.
Transmitter: 30 kW TV video carrier in Arezzo, Italy, distance 400 km,
direction south. Several high mountains in transmitter
direction prevent direct and tropospheric reception. This
transmitter is available for 24 hours (!).
Observing method: automatic setup using FFTDSP42t software by AF9Y to record
the audio signal. 20 channels of 2 Hz width are used for meteor
identification, pictures with interference are manually rejected.
More details see <http://www.net4you.co.at/user/kuneth/info.html>

All counts below are corrected for a full hour observing time. If the
availability of the data is 20-40 minutes, a dot is shown after the value.
Data for less than 20 minutes obs. time are not shown here.

Counts of reflections longer than 6.5 seconds (assumed to be overdense):

Notes:
. Summary for February 1997: not much meteor activity at all. The underdense counts show a significant dip at 05:00 - 06:00 UT, throughout the month. The underdense counts maximum is at 02:00 to 04:00 UT and the overdense maximum is at 08:00 to 10:00 UT, again throughout the month. Still looking for explanations.
. blank value means either few or no data available or interference.
. local time conversion: 1 hours ahead of UT (05h00 UT is 06h00 local)

Werfried Kuneth

Observer: Chikara Shimoda
Location: Asahi, Nagano, Japan (137 51' E, 36 07' N)
Frequency: 81.4 MHz
Transmitter Location: FM-Japan 81.3 MHz, 10 kW, distance 180 km
Antenna: 5 element Yagi directed to the zenith.
Receiver: AM-FM Tuner (TRIO KT-1100)
Observing method: Meteor echoes output from center-tuning meter were recorded on a pen-recorder chart.

2. ABOUT THE RMOB

The RMOB is an independent initiative of some workers in the field of radio
meteor scatter observations and data reduction. It started in August 1993
in order to spread rapidly the Perseid results via E-mail. Since then, it
has appeared monthly, and it has gradually been expanded. In regularly
publishing summaries of observations, potential radio observers are kept

up to date of existing installations, possibilities and limitations of radio meteor observations. In the long run, there should be sufficient observing stations to cover the whole globe, allowing to detect stream outbursts which may remain unnoticed visually.

RMOB contains typically: summaries of recent observations, equipment data, first results of stream activity by radio methods, relations between radio and optical meteors, references to other publications in the field of meteor astronomy and radio scatter techniques, announcements of meetings, short questions and answers, non-commercial (second hand) sale of radio equipment, available software.

Contributors are mentioned, and interested persons are asked to contact them directly.

RMOB can be copied freely in unabridged and unmodified form. Extracts should indicate the source (Radio Meteor Obs Bulletin, month and year).

If you want to subscribe (or un-subscribe) to the E-mail distribution list, please send a message to C. Steyaert.
Those not having access to E-mail can obtain a printed copy free of charge from J. Van Wassenhove (current or back-issues).

3. ANNOUNCEMENT

Jim Richardson would like to announce the release of the new revision to the American Meteor Society (AMS) Bulletin No. 203, "The AMS Radiometeor Project." The original version came out in January, 1997, so this revision amounts to a complete rewrite and update. The bulletin is about 50 pages long, and includes illustrations.

The bulletin is intended to outline the procedure and give technical information to those wishing to establish a meteor forward-scatter receiving station for inclusion into the AMS Radiometeor Network. This manual should also prove helpful to those who are interested in forward-scatter, but might not want to join the project itself. The bulletin pulls in practical information from a variety of sources, many of which are now out of print and difficult to find.

The bulletin is being released in three different formats:

a. All AMS members can receive an unbound (stapled) copy of the bulletin with their membership.

b. A bound single copy of the bulletin can be obtained for $2.00 from the AMS, in order to cover production and mailing costs. Requests should be sent to AMS headquarters at the below address:

American Meteor Society
c/o Dr. David D. Meisel
Dept. of Physics and Astronomy
State University of New York at Geneseo
1 College Circle
Geneseo, NY 14454

USA

c. Those who are more seriously interested in joining the project can obtain bound copies of AMS Bulletin No. 203 and the "Apple IIe Meteor Burst Software User's Manual" (which outlines the establishment of the computer automated data collection system) by sending $5.00 to the above address and requesting both manuals. The AMS is also including a short non-narrated demonstration video tape of system operation with this package.

Questions or comments regarding the AMS bulletin or the AMS Radiometeor Project should be directed to Jim Richardson

Hamcom will be held in the Arlington, Tx. Convention Center
from Friday, June 6 through Sunday, June 8, 1997. The
Texas Packet Radio Society (TPRS) http://www.tprs.org/ will
again host extensive programs on packet and digital subjects,
and has announced the program schedule and speakers.

In the past, these programs have been extremely well-attended,
so be sure to mark you calendar.

HAMCOM 97
TPRS Digital/Packet Program Schedule
Arlington, Tx. Convention Center

Saturday, June 7, 1997

9:00 - 9:30 Introduction to Digital Modes - Dave Wolf, WO5H
9:30 -10:30 Intro to Internet - Lee Ziegenhals, N5LYT
10:30-11:30 Spread Spectrum - Greg Jones, WD5IVD, Tom McDermott, N5EG
11:30-12:00 TEXNET update - Harry Ridenour, N0CCW
12:00-12:30 TPRS annual meeting
12:30- 1:00 break
1:00 - 2:00 APRS - Mike Heskett, WB5QLD
2:00 - 2:30 DXing with 2 Meter Packet - Presley Smith, N5VGC
2:30 - 3:00 Weather / NWS - Bob Morgan, WB5AOH
3:00 - 3:30 Radio Modifications - Joe Borovetz, WA5VMS
3:30 - 4:00 Channel Capacity - Tom McDermott, N5EG

Sunday, June 8, 1997

10:00- 10:30 Introduction to Digital Modes - Jim Neely, WA5LHS
10:30- 11:30 BBS forum - Dave Wolf, WO5H

I would suggest going over to the Hale-Bopp comet page
at JPL or it's mirror site.

They have over 1100 pictures posted, you should be able to
get an idea of what to expect there.

The URLs:

J.H.M. Wosten (pa3cev_@_amsat.org) wrote:

: Logsat is certainly not professional, who the hell wants to calculate
: a 80 mtrs dipole when tracking a satellite? It's a compromise.

I'm not sure why having the ability to do antenna work makes the program a compromise. Admittedly, I see little reason to maintain that feature in the program, but the simple solution is "don't use it."

What features (present or not) related to satellite tracking do you dislike about the program?

Regarding the demo - the old one let you set your QTH for an 'eval' period (30 days or something), then reset to default after that. Seems reasonable to me, unless they've changed since then. (Also, if you've installed the demo before, and your 'eval' period has elapsed, LogSat may make an entry in the Registry and not allow you to "re-evalutate" the program.)

I still believe that LogSat is the best form/function combination in Sat tracking software... But I'm open to comments on other apps.

I've got a lot of replies from amsat-bb list, and all suggest as minimum as 35 kHz filter bandwith. Assuming the NOAA satellites have +/- 17 kHz deviation on FM, and taking in mind the doppler shift, 50 kHz is the figure I'm guessing for wefax sat receiver.

After my posting, I was experimenting with an IC-R100 general coverage receiver at WFM mode (180 kHz); it is too much, I know, but I'm getting very good results with NOAA and METEOR. Not excessive intermod and adjacent channel interference. The antenna is a 7+7el yagi, tracking the satellites.

I've definitively discarded the DSP-2232, because the lack of proper software, and using WXSat and a souncard. This software is really excelent. The author tells that he is preparing an English language interface of his program.

Announcing NEW
Ham Radio.FAQ

This is the second generation of the original file that was
a regular USENET posting entitled

"rec.radio.amateur.misc Frequently Asked Questions"

The NEW Ham Radio.FAQ is a HyperText document that is on the
WWW and it contains 3 chapters plus hundreds of LINKS to radio
related sites!

1 - Introduction to the Ham Radio.FAQ
2 - Amateur Radio Organizations, Services, and Data Sources
3 - Amateur Radio Advanced and Technical Questions

Please provide a copy of the Ham Radio.FAQ to any new or
soon-to-be Hams that you know or share with them the URL to this
site:

http://www.mv.com/ipusers/wd1v

Send me an EMAIL <or packet with your Email address> if you want the
FAQ text file sent to you as an attached <120 K> file with the words
"HAM FAQ" on the subject line.

Send me a formatted disk with SASE disk mailer if you want the
FAQ text file sent to you on disk. PC or Mac are fine.

I heard it today. Very strong signal! I had a bit of a hard time copying
it though. RS-12 was up at the same time, and its beacon is also on 29.408.
You'd be amazed at what a KAM will spit out trying to decode two
simultaneous CW signals. :)

You've probably heard about the Mars Pathfinder probe. Once it lands on the Red Planet, Pathfinder will release the Sojourner Rover, a little laboratory on wheels. Sojourner will cruise about the Martian surface performing experments. It turns out that Sojourner and Pathfinder will communicate using two standard, off-the-shelf 9600 baud radio modems.

According to Jet Propulsion Laboratory program manager Donna Shirley, the modem manufacturer warned JPL that sending the modem to Mars would void the warrantee.

(This came from amsat-bb, an email list for amateur radio satellite enthusiasts).

Which TNC choice works best for the AEA PK-96 with the Windows 95 version of WISP? I've been using the TNC-2 choice, but was wondering if one of the other TNC types is better. Thanks & 73.

864. [Help] Winorbit 3.1: "Path Not Found" Error

Newsgroup: rec.radio.amateur.space
Date: 1997-03-08 00:00:00 UTC
From: buster <lathrop@azstarnet.com>
Message-ID: <3321AC6A.2B53@azstarnet.com>
Source record: 19618

Whenever I go to save anything, I get the error "Path Not Found" and
WinOrbit closes.

It occurs when I try to save the satellite database, the ini file and
when the save setting on exit is checked.

I've tried changing my default directory under windows program manager,
lauched it from file manager. I even included the directory in my path
statement.

I've tried different names for the directory.

When I tried to go back and run WinOrbit 2.9 after this failed attempt
at
3.1, I got the "Path Not Found" error when opening 2.9. It then won't
let
me open 2.9.

This is kind of a wacky problem, huh:-) I have no idea what path it may
be looking for, I assume it's looking for the path that it's in.

Any Idea's

I tried to be a detailed as I could.

TIA

Buster C.

872. RS-16 Telemetry format?

Newsgroup: rec.radio.amateur.space
Date: 1997-03-09 00:00:00 UTC
From: Brian Gibbs <brian@brimar.demon.co.uk>
Message-ID: <246021813wnr@brimar.demon.co.uk>
Source record: 19526

Hi. Having heard the newly launched RS-16 telemetry on its
beacon frequency of 29.408 MHz I wondered if there may be a
standard format for working out the values of transmitted data.

I ask the same question for RS-12, whose TLM appears on about
the same frequency.

I am hoping to write a simple programme to decode the stuff.

TIA for any useful information.....73.....Brian

Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc, rec.radio.amateur.space

Hello... Brian here!

If you have a RADIO and a SOUND BLASTER (or compatible card) you already have all the hardware necessary to:

RECEIVE - WEFAX, FAX, SSTV, COLOUR SSTV and RTTY
TRANSMIT - FAX, SSTV and COLOUR SSTV

*** Put the power of your 80386, 80486 or Pentium processor to real use ***

The external "decoder" units that are used by conventional users are modelled inside this software. This makes it easy to get started, inexpensive and rids you of the inevitable tangle of wires and boxes of decoders.

Absolutely no external hardware, other than a simple audio lead, is required by FTV. The current version decodes:

WEFAX (from weather satellites, e.g. 137-138 MHz)
HF-FAX (from terrestrial stations)
SSTV (from radio amateurs, e.g. 14.230 MHz)
RTTY (press, naval, weather etc)

Here is a run down of the more interesting features:

(1) It keeps the demodulated signal in memory, so that the signal can be analysed again at a different keying rate or polarity! Garbage can be resampled on the fly, which means that minutes of received signals decoded at the wrong baud rate or keying polarity are recovered, on the fly, while still receiving.

(2) The incoming signal is analysed automatically - standard modes, line rates, baud rates and keying polarity are automatically determined following analysis.

(3) Tuning oscilloscope available at all times, without loss of copy.

(4) Program works in real time.

*** What are you waiting for? Try it now! ***

Take a look at my web site for futher details, from where you can download an evaluation copy, at: http://www.geocities.com/SiliconValley/2504

Registration promotes the further development of this software and entitles the user to future upgrades paying only for delivery expenses, if any.
Current release is 0.98f

Finally, just in case some of you have trouble accessing my web site, here is my postal address (if you want a reply, send a self-addressed label and IRC's to cover expenses):
Brian E. Cauchi,
Gawhra, Domenico Cachia Street, Birkirkara BKR06, MALTA.

What can I say? Try it, and may you have as much fun as I am having...
73's from Brian.

SB SAT @ AMSAT $ANS-068.01
PHASE 3-D COMES ALIVE!

HR AMSAT NEWS SERVICE BULLETIN 068.01 FROM AMSAT HQ
SILVER SPRING, MD, MARCH 09, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-068.01

During the last week of February and the first week of March, major integration milestones for assembly and checkout of the AMSAT Phase 3-D satellite were accomplished by members of a combined international team working at the P3-D Lab in Orlando, Florida.

In a joint statement issued on March 7th, AMSAT-DL Vice President Werner Haas, DJ5KQ, and AMSAT-NA Executive Vice President Keith Baker, KB1SF, gave a brief rundown of the team's significant progress over the past two weeks.

"Phase 3-D is alive and doing very well!" said Werner. "We have now accomplished all the objectives we had hoped to achieve on this, our first major joint integration visit in Florida."

During this period, the combined team installed, powered up and then extensively tested the satellite's main power and computer (IHU) systems as well as transmitters for X-Band, V-Band and U-Band. All performed without problem. In addition, all of the spacecraft's many communications receivers have now been built into the satellite and they, too, were thoroughly tested and are now working well.

Likewise, the SCOPE camera experiment built by JAMSAT, the Japanese AMSAT group, was successfully installed and powered up while in the spacecraft. "First light" was also received via SCOPE during this test and the image quality of the initial pictures were absolutely superb.

Besides installing the various transmitters and receivers, Phase 3-D's Intermediate Frequency (IF) switching matrix, a device that will allow most any receiver to be cross linked to any transmitter, as well as the LEILA experiment (strong signal attenuator) were also successfully brought on line in the spacecraft.

Another major integration milestone came late Tuesday afternoon, March 4th, when team members Werner Haas (DJ5KQ), Peter Guelzow (DB2OS), Keith Baker (KB1SF), Stan Wood (WA4NFY) and Lou McFadin (W5DID) completed the first QSOs via Phase 3-D's configuration U/V "transponder". For this test, P3-D's U-Band

receiver was cross-linked to the V-Band transmitter through the IF Matrix.

What's more, the distinctive "warble" warning tone and notch capabilities of P3-D's LEILA were clearly demonstrated when Stan Wood deliberately overpowered his SSB "uplink" signal, thus triggering LEILA to first superimpose its warning tone on his "downlink" signal. When Stan persisted in overpowering his uplink, team members then watched (in amazement!) as the LEILA cut his downlink signal via P3-D's V-Band amplifier from some 140 watts to about 2 watts! Needless to say, the members of the German communications team were most pleased to finally show their American counterparts the fine quality and function of Phase 3-D's extremely capable communications suite.

On behalf of the P3-D Project Leader, Dr. Karl Meinzer, DJ4ZC, Werner and Peter expressed thanks for the fine hospitality shown by their American hosts. While much work remains to be accomplished, Phase 3-D's final integration and checkout is progressing on schedule for its anticipated launch in July. Stay tuned to ANS for further updates as work on making Phase 3-D "flight ready" continues.

[ANS thanks Keith Baker, KB1SF and Werner Haas, DJ5KQ, for the information that went into this bulletin item.]

SB SAT @ AMSAT $ANS-068.02
PHASE 3-D FUNDING UPDATE

HR AMSAT NEWS SERVICE BULLETIN 068.02 FROM AMSAT HQ
SILVER SPRING, MD, MARCH 09, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-068.02

While the Phase 3-D satellite was undergoing final integration in the next room, senior representatives of the Phase 3-D Integration Team also met at the P3-D Integration Lab in Orlando Florida in early March to discuss the latest fund status of the project.

In a joint news release on March 4th, Werner Haas, DJ5KQ, AMSAT-DL's Vice President and Keith Baker, AMSAT-NA's Executive Vice President outlined the success of the project's fund raising so far and the amount expended by each organization to date. In addition, they laid out a revised estimate of the funds that will be needed to finish and launch the satellite.

"The gap is closing, but we aren't out of the woods yet", Keith said.

As of December 31, 1996, the two major spending partners in the Phase 3-D effort, AMSAT-DL and AMSAT-NA, had together expended about $3 Million (US) on the project. This figure included some 2.5 Million Deutsche Marks (or about $1.6 Million (US)) by AMSAT-DL and about $1.4 Million (US)

by AMSAT-NA. Assuming the mid-year launch schedule of Phase 3-D holds, ,and no major problems with the satellite or the launch are encountered, the P3-team estimates that another $700,000 to $800,000 will be expended to complete, test and ship the satellite as well as to conduct the launch campaign in Kourou, French Guyana, South America.

"When comparing needed out-of-pocket funding to complete the project with funds currently on hand or expected, the team now projects a combined funding shortfall of about $200,000. Recent contributions have contributed significantly to offsetting this deficit. But, even counting these large and most welcome donations, about $120,000 has yet to be identified to complete the project. "

"Of course, this all assumes an on-time launch from Kourou with no delays or other problems between now and then", Werner said. "If we incur a launch delay, or if the satellite develops problems during final integration and test, the amount of funds needed to finish and launch the satellite could be much greater."

On behalf of the combined P3-D Team, Keith expressed his gratitude to those who have given generously to the project over the years. "Even during our labors to make Phase 3-D a technical reality, we are very grateful for the many sacrifices our donors have made to make the Phase 3-D satellite a fiscal reality as well." Baker went on to note that,

"Each of us on the Team remains ever-mindful that most of the money raised for P3-D came from individual Ham Radio Operators, many of whom have willingly postponed plans to buy one or more major pieces of equipment for their 'Ham Shacks' in exchange for contributions to sustain the project. This is a truly remarkable outpouring of support and is another example of the selfless sprit of Amateur Radio." he said.

The launch of Phase 3-D is now slated for early July aboard the next flight of the European Space Agency's Ariane 5 (Ariane 502) from Kourou, French Guyana.

[ANS thanks Werner Haas, DJ5KQ and Keith Baker, KB1SF, for the information that went into this bulletin item.]

/EX

SB SAT @ AMSAT $ANS-068.03
RS-16 LAUNCHED

HR AMSAT NEWS SERVICE BULLETIN 068.03 FROM AMSAT HQ
SILVER SPRING, MD, MARCH 09, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-068.03

A new Russian Amateur Radio satellite, listed as RS-16, has been launched from the Russian Cosmodrome Svobodny as part of a Zeya satellite package. RS-16 reportedly

has an average orbital altitude of 276 miles, producing a footprint some 2000 miles in diameter on Earth.

On March 4, 1997, 1614 UTC, Jim White, WD0E, reported hearing strong signals from the RS-16 CW beacon on 29.408 MHz. Others in the US and Europe have reported strong signals on 10 meters. The transponders are not yet active. The twice-delayed launch had been expected as early as December. RS-16 is expected to be a Mode A (2 meters up/10 meters down) satellite, like RS-10 and RS-15. It's the first Russian satellite to have a 70-cm beacon, but the beacon there is not yet operational. Beacon frequencies are 29.408, 29.451, 435.504 and 435.548 MHz. The 29.408 MHz beacon is the 435.505 only active beacon on at this time

Andy, RK3KPK, passed along this preliminary frequency and transponder information on RS-16.
Uplink = 145.915 - 145.948 MHz
Downlink = 29.415 - 29.448 MHz
Beacons = 29.408 , 29.451 MHz
Pwr 29 MHz Down = 1.2 W /4 W

Beacon 1 = 435.504 MHz
Beacon 2 = 435.548 MHz
Pwr 435 MHz Beacons = 1.6 W

The following are the latest Keplerian elements for Radio Sputnik 16 (RS-16) from the NASA OIG RAID RBBS:
RS-16

SB SAT @ AMSAT $ANS-068.04
STS-83/ SAREX INFO

HR AMSAT NEWS SERVICE BULLETIN 068.04 FROM AMSAT HQ
SILVER SPRING, MD, MARCH 09, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-068.04

STS-83 is scheduled to launch on April 3rd, 1997 at approximately 2:01 p.m. EST. The launch window is 2 hours 30 minutes long. STS-83 will be a SAREX mission. The following information will aid in communicating with the shuttle.

The SAREX Working Group has designated the following frequencies during the STS-83 mission.

FM Voice Downlink: (Worldwide) 145.55 MHz
FM Voice Uplink: 144.91, 144.93, 144.95, 144.97, and 144.99 MHz

FM Voice Uplink: (Europe only) 144.70, 144.75, and 144.80 MHz
FM Packet Downlink: 145.55 MHz***
FM Packet Uplink: 144.49 MHz***

***If packet is on the air.

CONFIGURATION: Officially, the SAREX hardware will be flown in configuration B. SAREX configuration B is voice only, battery operation. The SAREX equipment on-board STS-83 includes the Motorola 2 meter FM hand-held transceiver, 15 spare batteries, the window antenna, SAREX headset assembly, personal recorder and the required interconnecting cables. Since STS-83 is an extended duration flight with power hungry primary experiments, the power allocated for SAREX is 0 watts. The SAREX team is also flying the Heathkit Packet Radio TNC for potential use later in the flight. In the event that power conservation measures are successful, the mission control team will advise SAREX and the astronauts to initiate use of the Packet Radio system which also includes one of the Shuttle Laptop computers. Please stay tuned to ANS and sarex@amsat.org during the mission for late breaking news regarding packet operation.

CALL SIGNS:
FM voice call signs: KC5RNI, KC5BTK and KC5FVF
FM packet call sign: W5RRR-1 (If turned on during the flight)

CREW MEMBERS (titles and Amateur Radio call signs):
James D. Halsell, Commander, KC5RNI
Susan L. Still, Pilot
Janice E. Voss, Payload Commander, KC5BTK
Donald A. Thomas, Mission Specialist, KC5FVF
Michael L. Gerhardt, Mission Specialist
Roger Crouch, Payload Specialist
Greg Linteris, Payload Specialist

QSL VIA: Send reports and QSLs to ARRL EAD, STS-83 QSL, 225 Main Street, Newington, CT 06111-1494, USA. Include the following information in your QSL or report: STS-83, date, time in UTC, frequency and mode (FM, voice or packet). In addition, you must also include a SASE using a large, business-sized envelope if you wish to receive a card.

Below is a prelaunch Keplerian element set for STS-83, provided by Gil Carman, WA5NOM, of the NASA Johnson Space Center.

P3D BITS AND PIECES

HR AMSAT NEWS SERVICE BULLETIN 068.05 FROM AMSAT HQ
SILVER SPRING, MD, MARCH 09, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-068.05

There will be coverage of the Amsat P3D satellite project with video from
the
P3D-lab in Orlando Amsat-DL Marburg (Dr. Karl Meinzer) and IRS Stuttgart
(ATHOS plasma motor - prof Messerschmid) on BRTN (Belgian TV Dutch
program) on March, 17 at 2200 local time. The program, from Frank
Debosere, is named "alle vijf". This program can be viewed in central
Europe, Netherlands, Luxembourg Germany and parts of France and the UK.
This program is not on satellite.

[ANS thanks Freddy De Guchteneire, ON6UG, for this information.]

Design News magazine for March 3, 1997 has a one-page article with a
drawing titled "On a wing and a shoestring: Hams design their
next-generation communications satellite". The drawing shows P3D with the
ESA adapter and SBS with a size comparison to AO13. This is in the
Engineering News section, page 42. Dick Jansson, WD4FAB, is quoted several
times in the article.

[ANS thanks Ed Krome, K9EK (ex-KA9LNV), for this report.]

SB SAT @ AMSAT $ANS-068.06
WEEKLY SATELLITE REPORT PT 1

HR AMSAT NEWS SERVICE BULLETIN 068.06 FROM AMSAT HQ
SILVER SPRING, MD, MARCH 09, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-068.06

MIR:
(New frequencies implemented 1 January 1997:

Uplink 145.2 MHz FM
Downlink 145.8MHz FM)
Note, the above split is used for both packet and voice operation.

SAFEX, MIR 70cm Repeater
(Uplink 435.750MHz FM, Downlink 437.950MHz FM,
Subaudible tone 141.3 Hz)
The repeater operational and active..

RS-10:
(Uplink 145.865-145.905MHz CW/SSB, Downlink 29.36-29.4MHz CW/SSB)
Operating normally. Very busy with lots of QSOs heard over
north America and Europe.

RS-12:
(Uplink 21.21-21.25MHz CW/SSB, Downlink 29.41-29.45MHz or
145.91-145.95Mhz CW/SSB)
The sat continues to provide excellent downlink signals in both T-
and K-mode. During the weekend of March 1st, the transponder was
swamped by the exuberant DX-contesters on 15m, thus raising the hopes
of those of us on the east coast of the US for an ionospheric hop into
the sat which may just make possible a QSO with the rare DX of
KH6-land.

[ANS thanks Dick Montgomery, N3DV, for this update.]

RS-15
(Uplink 145.858-145.898MHz CW/SSB, Downlink 29.354-29.394MHz CW/SSB)
Be aware that RS-15 has battery charging problems. When the satellite is
in the dark it has low output power..

[ANS thanks Geoff Perry for this report.]
(Hint: If SSB doesn't work for you, try CW. CW is very easy
to hear on the downlink!)

RS-16
Beacon operational only on 29.408 MHz at this time.
The transponders are not yet active.
RS-16
1 24744U 97010A 97066.14889668 .00002139 00000-0 74153-4 0 367
2 24744 97.2814 333.1163 0009586 91.5327 268.6998 15.30875098 474

FO-20
(Uplink 145.9-146.0MHz CW/LSB, Downlink 435.8-435.9MHz CW/USB)
Operating normally. Strong downlink signal.

KO-23
(Uplink 145.85, 145.9MHz FM, Downlink 435.175MHz FM,
9600 Baud FSK.)
KO-23 operating normally.

KO-25:
(Uplink 145.87MHz FM, Downlink 436.5MHz FM,

9600 Baud FSK.)
KO-25 operating normally.

[ANS thanks Jim Weisenberger, AA7KC, for his reports on
KO-25 and KO-23.]

AO-27:
(Uplink 145.85MHz FM, Downlink 436.8MHz FM)
Operating normally and lots of activity heard.
As of NOV 2, the AO-27 schedule is as follows:
TEPR 4 = 16 = 8 Minutes in Length
TEPR 5 = 52 = 18 Minutes in Length

TX-3 is on Mid Power during TEPR 5.

This will have the TX turn on 8 Minutes after the satellite
enters the sun for a duration of 18 Minutes. This is a "back to US
Latitudes"operation.

N4USI, AO-27's current Command Station sends his thanks all for
their messages about the satellite turning on later than expected. He
reports he's deliberately letting the "turn on" time drift later
(for about 4-5 Minutes) so stations in the southern latitudes can also
have a chance to work AO-27. Every few months he will be letting the
turn on time drift like this to give more stations a chance to make
contacts thru the satellite.

877. RS-16 Telemetry query.

Newsgroup: rec.radio.amateur.space
Date: 1997-03-10 00:00:00 UTC
From: Brian Gibbs <brian@brimar.demon.co.uk>
Message-ID: <233277673wnr@brimar.demon.co.uk>
Source record: 19531

Having heard the CW telemetry from the newly launched RS-16 at good signal strength on 29.408 MHz today, 7th March: I was hoping to get some TLM format information. It may then be possible to write some simple software (it would need to be for me to write it!) to decode it.

Does anyone have such info yet please.

I also received the TLM from RS-12 whilst monitoring the same frequency this morning. Likewise, some format info would be very much appreciated to decode this too.

TIA.....73.....Brian

Most likely due to a missing subdirectory. The satellite database must be in ...\DATABASE\SAT\, where ... represents the WinOrbit program's directory (startup directory). This subdirectory should have been created when you UNZIPed the software. If not, refer to the documentation for your UNZIP program to see how to restore path names when UNZIPing.

> When I tried to go back and run WinOrbit 2.9 after this failed attempt
> at
> 3.1, I got the "Path Not Found" error when opening 2.9. It then won't

Not surprising, since the .INI file formats are quite different. Delete the .INI file and 2.9 should run again.

73!

SB SAT @ AMSAT $ANS-068.01
PHASE 3-D COMES ALIVE!

HR AMSAT NEWS SERVICE BULLETIN 068.01 FROM AMSAT HQ
SILVER SPRING, MD, MARCH 09, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-068.01

During the last week of February and the first week of March, major
integration milestones for assembly and checkout of the AMSAT
Phase 3-D satellite were accomplished by members of a combined
international team working at the P3-D Lab in Orlando, Florida.

In a joint statement issued on March 7th, AMSAT-DL Vice President
Werner Haas, DJ5KQ, and AMSAT-NA Executive Vice President Keith
Baker, KB1SF, gave a brief rundown of the team's significant progress
over the past two weeks.

"Phase 3-D is alive and doing very well!" said Werner. "We have now
accomplished all the objectives we had hoped to achieve on this, our
first major joint integration visit in Florida."

During this period, the combined team installed, powered up
and then extensively tested the satellite's main power and computer
(IHU) systems as well as transmitters for X-Band, V-Band and U-
Band. All performed without problem. In addition, all of the
spacecraft's many communications receivers have now been built into
the satellite and they, too, were thoroughly tested and are now working
well.

Likewise, the SCOPE camera experiment built by JAMSAT, the
Japanese AMSAT group, was successfully installed and powered up
while in the spacecraft. "First light" was also received via SCOPE
during this test and the image quality of the initial pictures were
absolutely superb.

Besides installing the various transmitters and receivers, Phase 3-D's
Intermediate Frequency (IF) switching matrix, a device that will allow
most any receiver to be cross linked to any transmitter, as well as the
LEILA experiment (strong signal attenuator) were also successfully

brought on line in the spacecraft.

Another major integration milestone came late Tuesday afternoon, March 4th, when team members Werner Haas (DJ5KQ), Peter Guelzow (DB2OS), Keith Baker (KB1SF), Stan Wood (WA4NFY) and Lou McFadin (W5DID) completed the first QSOs via Phase 3-D's configuration U/V "transponder". For this test, P3-D's U-Band receiver was cross-linked to the V-Band transmitter through the IF Matrix.

What's more, the distinctive "warble" warning tone and notch capabilities of P3-D's LEILA were clearly demonstrated when Stan Wood deliberately overpowered his SSB "uplink" signal, thus triggering LEILA to first superimpose its warning tone on his "downlink" signal. When Stan persisted in overpowering his uplink, team members then watched (in amazement!) as the LEILA cut his downlink signal via P3-D's V-Band amplifier from some 140 watts to about 2 watts! Needless to say, the members of the German communications team were most pleased to finally show their American counterparts the fine quality and function of Phase 3-D's extremely capable communications suite.

On behalf of the P3-D Project Leader, Dr. Karl Meinzer, DJ4ZC, Werner and Peter expressed thanks for the fine hospitality shown by their American hosts. While much work remains to be accomplished, Phase 3-D's final integration and checkout is progressing on schedule for its anticipated launch in July. Stay tuned to ANS for further updates as work on making Phase 3-D "flight ready" continues.

[ANS thanks Keith Baker, KB1SF and Werner Haas, DJ5KQ, for the information that went into this bulletin item.]

SB SAT @ AMSAT $ANS-068.02
PHASE 3-D FUNDING UPDATE

HR AMSAT NEWS SERVICE BULLETIN 068.02 FROM AMSAT HQ
SILVER SPRING, MD, MARCH 09, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-068.02

While the Phase 3-D satellite was undergoing final integration in the next room, senior representatives of the Phase 3-D Integration Team also met at the P3-D Integration Lab in Orlando Florida in early March to discuss the latest fund status of the project.

In a joint news release on March 4th, Werner Haas, DJ5KQ, AMSAT-DL's Vice President and Keith Baker, AMSAT-NA's Executive Vice President outlined the success of the project's fund raising so far and the amount expended by each organization to date. In addition, they laid out a revised estimate of the funds that will be needed to finish and launch the satellite.

"The gap is closing, but we aren't out of the woods yet", Keith said.

As of December 31, 1996, the two major spending partners in the Phase 3-D effort, AMSAT-DL and AMSAT-NA, had together expended about $3 Million (US) on the project. This figure included some 2.5 Million Deutsche Marks (or about $1.6 Million (US)) by AMSAT-DL and about $1.4 Million (US) by AMSAT-NA. Assuming the mid-year launch schedule of Phase 3-D holds, ,and no major problems with the satellite or the launch are encountered, the P3-team estimates that another $700,000 to $800,000 will be expended to complete, test and ship the satellite as well as to conduct the launch campaign in Kourou, French Guyana, South America.

"When comparing needed out-of-pocket funding to complete the project with funds currently on hand or expected, the team now projects a combined funding shortfall of about $200,000. Recent contributions have contributed significantly to offsetting this deficit. But, even counting these large and most welcome donations, about $120,000 has yet to be identified to complete the project. "

"Of course, this all assumes an on-time launch from Kourou with no delays or other problems between now and then", Werner said. "If we incur a launch delay, or if the satellite develops problems during final integration and test, the amount of funds needed to finish and launch the satellite could be much greater."

On behalf of the combined P3-D Team, Keith expressed his gratitude to those who have given generously to the project over the years. "Even during our labors to make Phase 3-D a technical reality, we are very grateful for the many sacrifices our donors have made to make the Phase 3-D satellite a fiscal reality as well." Baker went on to note that,

"Each of us on the Team remains ever-mindful that most of the money raised for P3-D came from individual Ham Radio Operators, many of whom have willingly postponed plans to buy one or more major pieces of equipment for their 'Ham Shacks' in exchange for contributions to sustain the project. This is a truly remarkable outpouring of support and is another example of the selfless sprit of Amateur Radio." he said.

The launch of Phase 3-D is now slated for early July aboard the next flight of the European Space Agency's Ariane 5 (Ariane 502) from Kourou, French Guyana.

[ANS thanks Werner Haas, DJ5KQ and Keith Baker, KB1SF, for the information that went into this bulletin item.]

SB SAT @ AMSAT $ANS-068.03
RS-16 LAUNCHED

HR AMSAT NEWS SERVICE BULLETIN 068.03 FROM AMSAT HQ
SILVER SPRING, MD, MARCH 09, 1997
TO ALL RADIO AMATEURS BT

BID: $ANS-068.03

A new Russian Amateur Radio satellite, listed as
RS-16, has been launched from the Russian Cosmodrome
Svobodny as part of a Zeya satellite package. RS-16 reportedly
has an average orbital altitude of 276 miles, producing a footprint
some 2000 miles in diameter on Earth.

On March 4, 1997, 1614 UTC, Jim White, WD0E, reported hearing strong
signals from the RS-16 CW beacon on 29.408 MHz. Others in the US
and Europe have reported strong signals on 10 meters. The
transponders are not yet active. The twice-delayed launch had been
expected as early as December. RS-16 is expected to be a Mode A (2
meters up/10 meters down) satellite, like RS-10 and RS-15. It's the
first Russian satellite to have a 70-cm beacon, but the beacon there
is not yet operational. Beacon frequencies are 29.408, 29.451,
435.504 and 435.548 MHz. The 29.408 MHz beacon is the
435.505 only active beacon on at this time

Andy, RK3KPK, passed along this preliminary frequency and
transponder information on RS-16.
Uplink = 145.915 - 145.948 MHz
Downlink = 29.415 - 29.448 MHz
Beacons = 29.408 , 29.451 MHz
Pwr 29 MHz Down = 1.2 W /4 W

Beacon 1 = 435.504 MHz
Beacon 2 = 435.548 MHz
Pwr 435 MHz Beacons = 1.6 W

The following are the latest Keplerian elements for Radio Sputnik 16
(RS-16) from the NASA OIG RAID RBBS:
RS-16

SB SAT @ AMSAT $ANS-068.04
STS-83/ SAREX INFO

HR AMSAT NEWS SERVICE BULLETIN 068.04 FROM AMSAT HQ
SILVER SPRING, MD, MARCH 09, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-068.04

STS-83 is scheduled to launch on April 3rd, 1997 at approximately
2:01 p.m. EST. The launch window is 2 hours 30 minutes long. STS-83
will be a SAREX mission. The following information will aid in
communicating with the shuttle.

The SAREX Working Group has designated the following frequencies
during the STS-83 mission.

FM Voice Downlink: (Worldwide) 145.55 MHz
FM Voice Uplink: 144.91, 144.93, 144.95, 144.97, and 144.99 MHz
FM Voice Uplink: (Europe only) 144.70, 144.75, and 144.80 MHz
FM Packet Downlink: 145.55 MHz***
FM Packet Uplink: 144.49 MHz***

***If packet is on the air.

CONFIGURATION: Officially, the SAREX hardware will be flown in
configuration B. SAREX configuration B is voice only, battery operation.
The SAREX equipment on-board STS-83 includes the Motorola 2 meter FM
hand-held transceiver, 15 spare batteries, the window antenna, SAREX
headset assembly, personal recorder and the required interconnecting
cables. Since STS-83 is an extended duration flight with power hungry
primary experiments, the power allocated for SAREX is 0 watts. The SAREX
team is also flying the Heathkit Packet Radio TNC for potential use later
in the flight. In the event that power conservation measures are
successful, the mission control team will advise SAREX and the astronauts
to initiate use of the Packet Radio system which also includes one of the
Shuttle Laptop computers. Please stay tuned to ANS and sarex@amsat.org
during the mission for late breaking news regarding packet operation.

CALL SIGNS:
FM voice call signs: KC5RNI, KC5BTK and KC5FVF
FM packet call sign: W5RRR-1 (If turned on during the flight)

CREW MEMBERS (titles and Amateur Radio call signs):
James D. Halsell, Commander, KC5RNI
Susan L. Still, Pilot
Janice E. Voss, Payload Commander, KC5BTK

SB SAT @ AMSAT $ANS-068.05
P3D BITS AND PIECES

HR AMSAT NEWS SERVICE BULLETIN 068.05 FROM AMSAT HQ
SILVER SPRING, MD, MARCH 09, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-068.05

There will be coverage of the Amsat P3D satellite project with video from
the
P3D-lab in Orlando Amsat-DL Marburg (Dr. Karl Meinzer) and IRS Stuttgart
(ATHOS plasma motor - prof Messerschmid) on BRTN (Belgian TV Dutch
program) on March, 17 at 2200 local time. The program, from Frank
Debosere, is named "alle vijf". This program can be viewed in central
Europe, Netherlands, Luxembourg Germany and parts of France and the UK.
This program is not on satellite.

[ANS thanks Freddy De Guchteneire, ON6UG, for this information.]

Design News magazine for March 3, 1997 has a one-page article with a
drawing titled "On a wing and a shoestring: Hams design their
next-generation communications satellite". The drawing shows P3D with the
ESA adapter and SBS with a size comparison to AO13. This is in the
Engineering News section, page 42. Dick Jansson, WD4FAB, is quoted several
times in the article.

[ANS thanks Ed Krome, K9EK (ex-KA9LNV), for this report.]

SB SAT @ AMSAT $ANS-068.06
WEEKLY SATELLITE REPORT PT 1

HR AMSAT NEWS SERVICE BULLETIN 068.06 FROM AMSAT HQ
SILVER SPRING, MD, MARCH 09, 1997
TO ALL RADIO AMATEURS BT

BID: $ANS-068.06

MIR:
(New frequencies implemented 1 January 1997:
Uplink 145.2 MHz FM
Downlink 145.8MHz FM)
Note, the above split is used for both packet and voice operation.

SAFEX, MIR 70cm Repeater
(Uplink 435.750MHz FM, Downlink 437.950MHz FM,
Subaudible tone 141.3 Hz)
The repeater operational and active..

RS-10:
(Uplink 145.865-145.905MHz CW/SSB, Downlink 29.36-29.4MHz CW/SSB)
Operating normally. Very busy with lots of QSOs heard over
north America and Europe.

RS-12:
(Uplink 21.21-21.25MHz CW/SSB, Downlink 29.41-29.45MHz or
145.91-145.95Mhz CW/SSB)
The sat continues to provide excellent downlink signals in both T-
and K-mode. During the weekend of March 1st, the transponder was
swamped by the exuberant DX-contesters on 15m, thus raising the hopes
of those of us on the east coast of the US for an ionospheric hop into
the sat which may just make possible a QSO with the rare DX of
KH6-land.

[ANS thanks Dick Montgomery, N3DV, for this update.]

RS-15
(Uplink 145.858-145.898MHz CW/SSB, Downlink 29.354-29.394MHz CW/SSB)
Be aware that RS-15 has battery charging problems. When the satellite is
in the dark it has low output power..

[ANS thanks Geoff Perry for this report.]
(Hint: If SSB doesn't work for you, try CW. CW is very easy
to hear on the downlink!)

RS-16
Beacon operational only on 29.408 MHz at this time.
The transponders are not yet active.
RS-16
1 24744U 97010A 97066.14889668 .00002139 00000-0 74153-4 0 367
2 24744 97.2814 333.1163 0009586 91.5327 268.6998 15.30875098 474

FO-20
(Uplink 145.9-146.0MHz CW/LSB, Downlink 435.8-435.9MHz CW/USB)
Operating normally. Strong downlink signal.

KO-23
(Uplink 145.85, 145.9MHz FM, Downlink 435.175MHz FM,
9600 Baud FSK.)

KO-23 operating normally.

KO-25:
(Uplink 145.87MHz FM, Downlink 436.5MHz FM,
9600 Baud FSK.)
KO-25 operating normally.

[ANS thanks Jim Weisenberger, AA7KC, for his reports on
KO-25 and KO-23.]

AO-27:
(Uplink 145.85MHz FM, Downlink 436.8MHz FM)
Operating normally and lots of activity heard.
As of NOV 2, the AO-27 schedule is as follows:
TEPR 4 = 16 = 8 Minutes in Length
TEPR 5 = 52 = 18 Minutes in Length

TX-3 is on Mid Power during TEPR 5.

This will have the TX turn on 8 Minutes after the satellite
enters the sun for a duration of 18 Minutes. This is a "back to US
Latitudes"operation.

N4USI, AO-27's current Command Station sends his thanks all for
their messages about the satellite turning on later than expected. He
reports he's deliberately letting the "turn on" time drift later
(for about 4-5 Minutes) so stations in the southern latitudes can also
have a chance to work AO-27. Every few months he will be letting the
turn on time drift like this to give more stations a chance to make
contacts thru the satellite.

[ANS thanks Michael, N4USI , AO-27 Control-op, for this
update.]

FO-29
Voice/CW
(Uplink 145.9-146.0MHz CW/LSB, Downlink 435.8-435.9MHz CW/USB)
Digital
(Uplink 145.85, 145.87, 145.910 MHz FM, Downlink 435.910 MHz FM 9600
baud BPSK)
FO-29 is in Analog mode at the current time.

[ANS thanks Ken Ernandes, N2WWD, for the updated keps.]

OSCAR-11
(Downlink 145.825MHz. FM, 1200 Baud PSK)
.The last month (14 January - 17 February) has been uneventful for OSCAR-11. Good, steady signals have been received from the 145.826 MHz. beacon. Mirek, OK2AOK reports hearing the mode-S beacon on January 25th. The signals peaked at S6 on a pass when the maximum elevation was 21 degrees.

[ANS thanks Clive Wallis, G3CWV, and Richard W L Limebear, G3RWL, for this information.]

AMSAT-OSCAR-16 (PACSAT)
(Uplink 145.9, 145.92, 145.94, 145.86MHz FM, Downlink 437.0513MHz SSB, 1200 Baud PSK.)
PACSAT (AO-16)
It is working normally in its orbits on Europe..
The WOD files are active again.
Graphic information about WOD/Telemetry values can be found at:
http://arrakis.es/~ea1bcu/ao16.htm

[ANS thanks Miguel A. Menendez, EA1BCU, for this report.]

DO-17(DOVE)
(Downlink 145.825MHz FM, 1200 Baud AFSK.)
No changes reported during last few weeks

WEBERSAT (WO-18)
(Downlink 437.104MHz SSB, 1200 Baud PSK AX.25.)
Webersat (WO-18) is currently in MBL mode after last weeks system crash. The satellite appears to be in good condition broadcasting MBL telemetry.

BCRi316.43mA bplt 1.340C TxPw 0.231W 5 V 5.742V 8.5V10.008V 10V 14.036V

[ANS thanks Tommy Davis, IK3WVJ, for this report.]

LUSAT-OSCAR-19
(Uplink 145.84, 145.86, 145.88, 145.9MHz FM, Downlink 437.1528MHz SSB, 1200 Baud PSK AX.25.)
LUSAT (LO-19)is working excellently in its orbits on Europe.

[ANS thanks Miguel A. Menendez, EA1BCU, for this report.]

IO-26 (ITAMSAT):
(Uplink 145.875, 145.9, 145.925, 145.95MHz FM, Downlink 435.822MHz SSB,
1200 Baud PSK.)
IO-26 controllers report that the spacecraft is now in IHT mode. The new
ROBOT software is under currently undergoing tests. The beacon reports
that the digipeater is OFF and that the ROBOT is undergoing tests.
Controllers ask that groundstations please do not transmit on any of
the satellite's uplink frequencies for the time being.

[ANS thanks Daniele Piercarlo, IK2XRO, ITMSAT Command Station for this
report.]

Subject: Home Page for FO-20, and AO-27 Schedules

No, I'm not announcing one. Just want to know if there
is anything like this on the web. We could setup skeds
and maybe even use electronic QSLs if confirmation is
needed for the contacts.
There are several Ham chat groups, but they don't seem
to have any purpose and are usually empty or taken up
by friends having their personal chats.

From: Brian Gibbs <brian@brimar.demon.co.uk>
Subject: RS-16 Telemetry format?

Hi. Having heard the newly launched RS-16 telemetry on its
beacon frequency of 29.408 MHz I wondered if there may be a
standard format for working out the values of transmitted data.

I ask the same question for RS-12, whose TLM appears on about
the same frequency.

I am hoping to write a simple programme to decode the stuff.

TIA for any useful information.....73.....Brian

881. Re: FTV = WEFAX-FAX-SSTV-RTTY with SoundBlaster

Newsgroup: rec.radio.amateur.space
Date: 1997-03-10 00:00:00 UTC
From: Brian Gibbs <brian@brimar.demon.co.uk>
Message-ID: <439339989wnr@brimar.demon.co.uk>
Source record: 19535

PLEASE PLEASE DO NOT MAIL BINARIES TO THIS NEWSGROUP!!!!!!

They take a very long time to download, and fill my HDD with
material I did not ask for, or need!

It is much better to use the newsgroup as a place for a pointer
only, which tells us from where we may download the binary
file(s) IF we need them.

Thankyou......

882. NORAD Two-Line Orbital Element Sets (TLE958)

Newsgroup: rec.radio.amateur.space
Date: 1997-03-10 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <5g243e$1fd@blackbird.afit.af.mil>
Source record: 19536

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

883. sun and moon keps maybe

Newsgroup: rec.radio.amateur.space
Date: 1997-03-10 00:00:00 UTC
From: Tone <n2izl@dorsai.org>
Message-ID: <3324B0D6.45BA@dorsai.org>
Source record: 19537

HI,
Got these keps for the sun and moon from a prgram called moonkeps.exe
thanks to Bruce Beford KA1ORB.
Have several problems though.
1 Instant Track accepts the moon kep and tracked ok.
but not the sun says numeric value out of range
2 WISP accepts both keps and works ok
3 Track-Box accepts moon kep but when you tell it to track it displays
AZ N EL N apparently not able to make the caculations.

MOON

Ham-Space Digest Mon, 10 Mar 97 Volume 97 : Issue 87

Today's Topics:
NORAD Two-Line Orbital Element Sets (TLE958)

Send Replies or notes for publication to: <Ham-Space@UCSD.Edu>
Send subscription requests to: <Ham-Space-REQUEST@UCSD.Edu>
Problems you can't solve otherwise to brian@ucsd.edu.

Archives of past issues of the Ham-Space Digest are available
(by FTP only) from ftp.UCSD.Edu in directory "mailarchives/ham-space".

We trust that readers are intelligent enough to realize that all text
herein consists of personal comments and does not represent the official

policies or positions of any party. Your mileage may vary. So there.

Date: 10 Mar 1997 23:05:18 GMT
From: tkelso@afit.af.mil (TS Kelso)
Subject: NORAD Two-Line Orbital Element Sets (TLE958)

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

****

886. WTB: 144/432 transverter

Newsgroup: rec.radio.amateur.space
Date: 1997-03-11 00:00:00 UTC
From: CrAcKeD <sputnik@seaside.net>
Message-ID: <33253627.0@scipio.cyberstore.ca>
Source record: 19540

Hi.. I am looking for a transverter to use on my 2m all mode to transvert to 432 for satellite operations so the kids across the street at the school where I live can get a taste of satellite work. Can anyone help??

thanks...

888. Re: bincancel:14 large binaries:AR960:@@NCM

Newsgroup: rec.radio.amateur.space
Date: 1997-03-11 00:00:00 UTC
From: red@redpoll.mrfs.oh.us
Message-ID: <ARMM-Report-960.a@redpoll.mrfs.oh.us>
Source record: 19542
Cross-posted to: alt.retromod,comp.os.ms-windows.win95.misc,comp.publish.cdrom.software,rec.arts.drwho,rec.arts.sf.starwars.games,rec.games.chess.computer,rec.music.hip-hop,rec.radio.amateur.space,soc.culture.iranian

Large binary posts do not belong in unmoderated discussion groups.

Please read this entire message, the Bincancel FAQ, and the complete
report (see below) before following up to or responding to this article.

As a service to, and with the cooperation of, other news administrators,
I run a program that searches for, and issues advisory cancels for,
large binaries in the akr, biz, comp, humanities, misc, news, nz, rec,
sci, soc, and talk hierarchies.

I have issued 14 cancels for large binary files (average size 451,610
characters - total size 6,322,543 characters) posted to 8 different
unmoderated discussion groups in the comp, rec, and soc hierarchies
as follows:
5 rec.games.chess.computer
2 rec.arts.drwho
2 comp.publish.cdrom.software
1 soc.culture.iranian
1 rec.radio.amateur.space
1 rec.music.hip-hop
1 rec.arts.sf.starwars.games
1 comp.os.ms-windows.win95.misc

This pointer is being posted to each affected group listed above.
Follow-ups are directed to news.admin.net-abuse.usenet.

If you want to see exactly which file was deleted from a particular
group, read the full report in news.admin.net-abuse.bulletins. The
full report can also be found in news.lists.filters and alt.retromod.
Look for AR960 in the subject, or, if your reader supports it,
use <URL:news:ARMM-Report-960@redpoll.mrfs.oh.us>.

The criteria used to search for this batch of large binaries were:
NEWSGROUPS: Unmoderated groups in the akr, biz, comp, humanities,
misc, news, rec, nz, sci, soc, and talk hierarchies
(except for comp.binaries.apple2, comp.bugs.2bsd, and
rec.games.bolo)
BINARY: base64, binhex, uuencode, and xbtoa encoded files, etc.
SIZE: > 100,000 characters [(size * (# of parts - .5)), if multi-part]

For more information about binary cancels, see the bincancel FAQ,
<URL:http://www.southcom.com.au/~geniac/binfaq.txt>.

Please direct public feedback to news.admin.net-abuse.usenet and private
feedback to red@redpoll.mrfs.oh.us. In the interests of preventing

cross-posted flame wars, please honor the followup-to header and do
not cross-post your reply to multiple groups. Thank you for your
cooperation.

Best wishes,
Dick

889. WxSat, English version now available!

Newsgroup: rec.radio.amateur.space
Date: 1997-03-11 00:00:00 UTC
From: jkktl@aol.com
Message-ID: <19970311150600.KAA26596@ladder01.news.aol.com>
Source record: 19543

The new version of WxSat, v 2.3, is now available.

There are several improvements as well!

you can get it at:

http://members.aol.com/jkktl/ham.htm

Thank you to Christian Block, the author, for such an outstanding program!

890. G5400B/Fiberglass Boom

Newsgroup: rec.radio.amateur.space
Date: 1997-03-11 00:00:00 UTC
From: JAM <bmyers@primenet.com>
Message-ID: <3325A196.7DC9@primenet.com>
Source record: 19544

For Sale:

Yaesu G-5400B az/el rotor. Brand new, box never opened. $479.00 plus shipping.

ALSO:

Fiberglass 1-1/2 inch X 8 foot "solid" crossboom, new. Perfect for OSCAR Satellite Antenna setup. Consists of 1 eight-foot piece 1-1/2 inch diameter, 1/4 inch wall (1-1/4 inch I.D.) with 1 eight-foot piece of 1-1/4 inch solid fiberglass rod inserted in it (tight fit). That makes, for all practical purposes, an 8 foot solid fiberglass crossboom to nicely fit your G-5400 rotor. Strong.

Price: $79.00 plus shipping UPS (it meets UPS requirements for length) in U.S.A.

Please reply to Bob: bmyers@primenet.com

892. Want - Fiberglass Pole for Rotor

Newsgroup: rec.radio.amateur.space
Date: 1997-03-11 00:00:00 UTC
From: "Richard L. Tannehill, P.E." <rickw7rt@ibag.com>
Message-ID: <3325B7B7.7A4C@ibag.com>
Source record: 19546

I'm looking for a 6 - 6.5 foot long 1 1/2" OD fiberglass pole for my elevation rotor. Should be metal reinforced on ends. Will pay shipping.

Call after 6 PM MST to (602) 435-9584, or e-mail rickw7rt@ibag.com, to rickw7rt@aztec.asu.edu, or packet to kc7y.az.usa.na

Rick T. - W7RT

893. Keps for RS-16???

Newsgroup: rec.radio.amateur.space
Date: 1997-03-11 00:00:00 UTC
From: jrybak@MesaState.EDU
Message-ID: <5g4cm4$8nn@mesa7.mesa.colorado.edu>
Source record: 19547

Does anyone know where I can get the keps for the new RS-16? They don't seem to be included in the new ARRL keps postings nor in that posted by Kelso.

Thanks.

Jim Rybak

894. Information about RS-15 and RS-16

Newsgroup: rec.radio.amateur.space

I'm new at using amateur satellites. What I need to know is how do I go about using RS-10. What I already know is that I could use my hand held for the up-link and my shortwave for down-link. Are amatuer's only allowed to use cw, but not voice.

Thanks,

Anthony

I've been tracking a few birds to get the hang of the QSOs... but whenever RS-15 comes by, I can never here it! I can here RS-10's beacon.... Has RS-15's orbit moved? Do I need new keps? What's the best 10m receive antenna for _INDOORS_ for the easy sats?

I'm hoping that the sats will be interesting!

73,
John

The Keps are definitely listed by T.S. Kelso, the problem is that you
have to know where to look :-). As with AO-21, the RS-16 is a package
bolted to a big satellite, in this case the main satellite is called
Zeya and the NORAD number is 24744.

In TLE958.txt by T.S. Kelso, you will find

ZEYA

You've got the downlink part ready, as long as your shortwave receiver can receive single sideband (SSB), or has a BFO (Beat Frequency Oscillator). It should also be able to tune the 29 MHz range.

Now the uplink is going to be a little more complicated. The prefered modes for using RS-10/11 is SSB for voice, and CW for CW. A 2-M handheld typically transmits FM only (OK - PM if you really want to get technical). I've tried to work RS-10/11 when someone's tried to make contacts running 100 watts from their 2M FM rigs - its not a pretty picture.

Don't be discouraged! Somewhere out there are modifications that you can make to your 2M handheld to send CW, or something close to it. Maybe someone here knows.

John,good morning. RS-15 is alive and well. Orbit is the same. I made a few QSO's night before last. Last night I didn't hear much on the 8:48 PM pass (EST), signal was a little weak, didn't hear any QSO's although I could hear my CW, signal was down. Keep tuning up, and hope to hear from you on the bird's

From: JAM <bmyers@primenet.com>
Subject: G5400B/Fiberglass Boom

For Sale:

Yaesu G-5400B az/el rotor. Brand new, box never opened. $479.00 plus
shipping.

ALSO:

Fiberglass 1-1/2 inch X 8 foot solid crossboom, new. Perfect for
OSCAR Satellite Antenna setup. Consists of 1 eight-foot piece 1-1/2
inch diameter, 1/4 inch wall (1-1/4 inch I.D.) with 1 eight-foot piece
of 1-1/4 inch solid fiberglass rod inserted in it (tight fit). That
makes, for all practical purposes, an 8 foot solid fiberglass crossboom
to nicely fit your G-5400 rotor. Strong.

Price: $79.00 plus shipping UPS (it meets UPS requirements for length)
in U.S.A.

The Keps are definitely listed by T.S. Kelso, the problem is that you
have to know where to look :-). As with AO-21, the RS-16 is a package
bolted to a big satellite, in this case the main satellite is called
Zeya and the NORAD number is 24744.

In TLE958.txt by T.S. Kelso, you will find

ZEYA
1 24744U 97010A 97069.22099973 .00002874 00000-0 98710-4 0 104

I just listened in on rs-15 recently, so as far as I know it should
still be alive. One thing to consider, rs-15 has a _very_ high orbit.
This makes receiving somewhat difficult, I use a large outdoor tri-band
beam for 10,15,and 20 meters and I still have trouble getting a good
signal sometimes. Also, due to its altitude, the more popular mode is CW,
listen for that instead of voice.

Good Luck, and listen for the MTU club station, w8yy, on the birds!

In the "something close to it" category, just use the PTT swith on your
HT for sending CW. Personally, I've never seen it done, but I've heard
claims that people have worked the satellites using this psuedo-CW and a
5/8 wave whip mounted on their HT.

Something to try at least.

Hi James,

Over our spring break I worked Belgium on RS-15. There's quite a bit of
fading, but it is workable. I don't think 2000 km is _very_ high. Phase 3D
will be even higher.

I was able to locate fiberglass poles in the 1 1/4 to 1 1/2 in range
in 20' lengths for about 20.00 from
a flag pole dealer.
That is what I used..
The length I used was about 7'
ran a 28 elememt 19 ft boom 440mhz antenna on one side
and on the other had a 22 element 21ft boom RHC 144 mhz antenna on the
other

only problem that I had was that the antennas would still slip out of
alignment. I did not want to tighten down to much on the fiberglass..

Good luck with your search

Anthony,
I dont want to spoil your fun but here are a few problems that you will
have.
1. you will most likely chirp while the pll in your ht locks up
on your transmit frequency
2. correct procedure is to STAY on one receive frequency and and vary your
transmit frequency to compsate for doppler shift to stay on your downlink
frequency.. With a ht you will be all over the the place?
3. Make sure the mic is disabled since any audio getting into the
mic/transmitter will cause fm'ing of the downlink signal
4. low transmit power level.. granted it dont take a lot of power to work
RS-10 but 10 - 25 watts would be more reliable

Yes.. US Hams can do CW and SSB thru the RS-10 Satellite
Check out www.amsat.org
they have a LOT of good information there

Good luck.
Give it a try.. see if you can at leat hear yourself
:-)

for example
145.850 up
29.385 down
+ or - for doppler

I hope I have the freqs right.. it has been a few years
:-)

Hi,

I have just downloaded WXSAT and am trying to set it up. I am getting good signals from NOAA-12 on 137.500 but I have been unable to decode any pictures yet.

My RX is an Icom R7000. The FM bandwidth is either 15kHz or 6 kHz. Is this OK?

I have checked the levels going into the mic input on my PC and they look OK.

I would appreciate any help/advise anyone can offer.

Thanks in advance

No.

You need 38-50kHz. Depending on doppler.

Since there has been some discussion on this satellite, I thought I would mention what I use out here. Besides a homebrew 3el (about 10 ft up) I also use a MOSFET preamp I made back in the 70's. This was in the VHF section of the '76 ARRL Handbook. Sure makes a difference on receiving the downlink on 10M for me.

RS 15 is in a higher orbit, probably at lower power and thus has a much
weaker signal than RS-10. I use a 20 m groundpalne for listening to the HF
sats and RS-10 is easy, but RS-15 can only be heard at the higher
frequencies. If you have problems with outdoor antenna's try something
small, a car CB antenna e.g. with a preamp. (the noise from the galaxy is
quite high at 30 MHz, only most HF sets already recon on that!) As the
sky temperature (noise, not physical) is probably above 1000K a 5 dB preamp
would suffice for a full groundplane, thus a good Si dual gate preamp with
a noise figure of 1 to 2 dB will probably suffice for a 1m rod.

Message-ID: <dnz7GDA6jRKzEwUB@miti.demon.co.uk>
Source record: 19472

Hi,

I am just getting into WXSAT reception and would appreciate any
help.

I am using the WXSAT programme, which utilises the PC's
soundcard to decode the pictures. I am using 137 MHz and have
had some success with NOAA's 12 & 14 and Meteor 3-5. Are there
any other sats that I should be looking for in this band?

Also, re. the WXSAT prog; I can get it to produce a live picture
OK, but if I try to auto record it doesn't want to know. Also, in the
parameters window there are many different parameters to
adjust...can anyone give me a rundown of the optimum settings
please? Do any of the sats available on 137 MHz send colour pics,
or are they all monochrome.

Thanks in advance for any help

> had some success with NOAA's 12 & 14 and Meteor 3-5. Are there
> any other sats that I should be looking for in this band?
>

<snip>

Mike,
Sats in the band are:
NOAA 12_____137.5Mhz.
NOAA 14_____137.62Mhz.
OKEAN 4____137.4Mhz.
Sich -1_______137.4Mhz.
Meteor 3-5___137.85Mhz.
Meteor 3-6___137.30Mhz?? (inactive)
Meteor 2-21__137.85Mhz. (inactive)

Since you're in the UK you might be able to pick up SICH and
OKEAN. (Unfortunatly for us folks in the US they only transmit over
Russia.) None of the sats transmit in color, but WXSAT program will
generate pseudo-color images from the NOAA IR/VIS transmissions.
What type of problem are you having with the auto record? Is it not
responding at all or won't it auto sync....?

A good source for WX sat info in the UK is the Remote Imaging Group
(http:\\www.rig.org.uk)

Regards,

Rolf

920. Satellite Antenna/Rotor

Newsgroup: rec.radio.amateur.space
Date: 1997-03-14 00:00:00 UTC
From: jtpjatae@bicc00.bi.ehu.ES
Message-ID: <3.0.1.32.19970314153327.007c4e20@bicc00.bi.ehu.es>
Source record: 19474

I am considering to purchase a rotor and antennas for satellite operation:=
Here are some of my caveats (I am not an expert):

1) Antenna Choice: I have been searching for antennas for satellite=
operation and I have found these posibilities:

Cushcraft: $200+$190=3D$390 (no crossboom included)

22XB 144-148Mhz 22el. 14dB

738XB 432-448Mhz 38el. 15.5dB

With built-in polarity switch.

Boom of 6063-T832 =BF? Aluminium

Stainless Steel Hardware

No crossboom

Hygain Telex: $400

Oscar Link with

216AT 144-148Mhz 16el 11.5dB=09

7030AT 432-448Mhz 30el 14dB=09

With built-in polarity switch.

Boom of =BFAluminium?

Stainless Steel Hardware

Fiber Glass crossboom included

KLM

Small Oscar Set: $400

2M-14C 144-150Mhz 14el 11dB

435-18C 420-450Mhz 18el 12dB

With built-in polarity switch.

All stainless steel

Fiber Glass crossboom included

Large Oscar Set: $500

2M-22C 144-148Mhz 22el 13dB

435-40C 420-440Mhz 40el 15dB

With built-in polarity switch.

All stainless steel

Fiber Glass crossboom included

My conclussions are:

-There is little difference in price...

-Cushcraft seems to have the highest gain.

-I have not VSWR data for all the antennas/band

-KLM is the only one with a steel boom, is this a real important point?

-Not all the systems covers the Spanish (European) whole bands:=
144-146Mhz/430-440Mhz. Only KLM...

So the best purchase should be the KLM small set (in it's price category) or=
perhaps the Cushcraft.

Any comments, advices or (good or bad) experiences with these antennas?

2) Rotor Choice

This is simpler, the only (I haven't found other) possibility in=
azimut/elev. is the Yaesu 5600B. I have been told that sometimes it is=
possible to get almost the same thing with Kempro (is this rigth?). There=
are sometimes bargains with Yaesu 5400. Which are the differences with the=
5600B?

Any comments, advices or (good or bad) experiences about rotors?

Best regards

Eduardo/EA2BAJ

PD: I haven't been able to get information about maspro antennas. Any=
kludges

Subject: 2 mtr. OSCAR antenna circular polarizing switch

Hi,

Does anyone have a recommendation as to what circular polarizing switch
(to switch from RHCP to LHCP) is usuable with an older Cushcraft 2 meter
OSCAR antenna? I have a Cushcraft A144-20T and a Cushcraft A144-10T.

Thanks for the help in advance.

From: cjeffers@luminet.net (Jim)
Subject: Alliance Tenna Rotor setup

Hello Everyone!

I recently aquired an Allinace Tenna rotor for free. I'm hoping to use it as a
elevation rotor by sliding a peice of renforced PVC through it then placing a
9 element 70cm quagi on one end and a 4 element 2 meter quad on the other.

I'd like any suggestions on this type of setup specificly a more accurate way
of controling the rotor besides that old rotor control box that looks as if it
will melt!

Thanks and 73's de

Subject: Dish Feed Conversion

I was told that it is possible to convert Vert./Horz. polarization to
Left/Right Circular. Possibly with the use of diodes. Is this TRUE???
I've come up empty handed so far.

I'd really appreciate any info you can provide! Thank you.

Subject: Help for RS-15 D/L

Since there has been some discussion on this satellite, I thought I would
mention what I use out here. Besides a homebrew 3el (about 10 ft up) I
also use a MOSFET preamp I made back in the 70's. This was in the VHF
section of the '76 ARRL Handbook. Sure makes a difference on receiving
the downlink on 10M for me.

Subject: RS-10/11

Anthony,
I dont want to spoil your fun but here are a few problems that you will
have.
1. you will most likely chirp while the pll in your ht locks up
on your transmit frequency
2. correct procedure is to STAY on one receive frequency and and vary your
transmit frequency to compsate for doppler shift to stay on your downlink
frequency.. With a ht you will be all over the the place?
3. Make sure the mic is disabled since any audio getting into the
mic/transmitter will cause fm'ing of the downlink signal
4. low transmit power level.. granted it dont take a lot of power to work
RS-10 but 10 - 25 watts would be more reliable

Yes.. US Hams can do CW and SSB thru the RS-10 Satellite
Check out www.amsat.org

they have a LOT of good information there

Good luck.
Give it a try.. see if you can at leat hear yourself
:-)

for example
145.850 up
29.385 down
+ or - for doppler

I hope I have the freqs right.. it has been a few years
:-)

RS 15 is in a higher orbit, probably at lower power and thus has a much
weaker signal than RS-10. I use a 20 m groundpalne for listening to the HF
sats and RS-10 is easy, but RS-15 can only be heard at the higher
frequencies. If you have problems with outdoor antenna's try something
small, a car CB antenna e.g. with a preamp. (the noise from the galaxy is
quite high at 30 MHz, only most HF sets already recon on that!) As the
sky temperature (noise, not physical) is probably above 1000K a 5 dB preamp
would suffice for a full groundplane, thus a good Si dual gate preamp with
a noise figure of 1 to 2 dB will probably suffice for a 1m rod.

From: Gary Watts <gwatts@bensoft.com>
Subject: Want - Fiberglass Pole for Rotor

I was able to locate fiberglass poles in the 1 1/4 to 1 1/2 in range
in 20' lengths for about 20.00 from
a flag pole dealer.
That is what I used..
The length I used was about 7'
ran a 28 elememt 19 ft boom 440mhz antenna on one side
and on the other had a 22 element 21ft boom RHC 144 mhz antenna on the
other

only problem that I had was that the antennas would still slip out of
alignment. I did not want to tighten down to much on the fiberglass..

Good luck with your search

From: Mike <Mike@miti.demon.co.uk>
Subject: WXSAT reception

Hi,

I am just getting into WXSAT reception and would appreciate any
help.

I am using the WXSAT programme, which utilises the PC's
soundcard to decode the pictures. I am using 137 MHz and have
had some success with NOAA's 12 & 14 and Meteor 3-5. Are there
any other sats that I should be looking for in this band?

Also, re. the WXSAT prog; I can get it to produce a live picture
OK, but if I try to auto record it doesn't want to know. Also, in the
parameters window there are many different parameters to
adjust...can anyone give me a rundown of the optimum settings
please? Do any of the sats available on 137 MHz send colour pics,
or are they all monochrome.

Thanks in advance for any help

Mike

It is possible with a device called a 90 degree hybrid coupler (or magic
tee if you use waveguide). This is a four port device, and if you put
horizontal / vertical on two ports you get circulair left /right on the
other two. Don't forget to put a dummy on the other side!
If you've got enough money you can buy one from mini-circuits for low power
work, or make one from coax for high power low price (but a small bandwidth)
If you can't find any articles about making one, mail me.

The bandwidth needs to be at least 35 45 Khz..otherwise you are clipping
off about half of the signal data.

There are ways to easily modify a scanner for this bandwidth.

Jim

you can get some tips on using WXSAT at:

http://members.aol.com/jkktl/ham.htm

WXSAT is THE BEST system out there for weather satellite reception!!

Better than any commercial hardware system!

It takes a little patience to set it up..but more importantly..what is
your receiver, antenna, computer graphics capability?

E me and check into the above web site!

Many "one size fits all" saddles offer very little surface
contact. I've gotten much better results by machining
my own out of square aluminum tubing to match the mast/boom
size I use--so I can tighten the antennas down by hand with
wing nuts. The EME types use milled blocks of aluminum to
do even better.--Zack Lau W1VT

931. Internet in the Sky from a Big LEO

Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.space

I read the following in a Reuter's story today. Note that Teledesic is a Big LEO, not a Little LEO. These are not the guys trying to steal amateur spectrum.

The FCC granted a license to offer Internet and telephone services over the airwaves to Teledesic, a company backed by Bill Gates of Microsoft and Craig McCaw (former chairman of McCaw Cellular Communications.)

The company will launch and operate a satellite constellation carrying broadband communications of Internet, video-conferencing, interactive multimedia, etc.

This is the first time that the FCC has granted this type of license.

McCaw claims that service will begin in 2002. (Saves them from that pesky year 2000 problem, eh :-)

Source record: 19486

What does it take to get anything going on that bird? Unless the pass is almost directly overhead, no luck here. Occasionally there is a sig to be heard, but never anything as loud as the .4 w beacon. the max for the beacon is 1.2 w, and it is loud and clear. What does it take to hit it consistently? I know it takes more than 100w and ten elements.

Gus, N4ZO

I am from canada, but i suspect the information, you are looking for,
could come from anyone.
packet radio is something like the internet, however there are two
disctinct comparisons/differences. the internet is fast and more
efficient but packet radio is wireless.
With packet radio you need a tnc. you can probably get lots of
information if you type tnc or packet radio on your
internet search engine.
For packet you will need your computer, thats obvious, a tnc and a two
meter radio.
tncs generally cost around $150 to $450, again i am canadian and our
prices tend to be higher.
The general frequencies used tend to be around the 145 mhz, plus or
minus .1 mhz, area.
In terms of international boating, you might consider investingating
the use of the amateur digital, packet, satellites which are up.
Again, use you search engine and look for amsat and see what
they have to say about packet and amateur satellites.
With just about any mode/band of amateur radio, you can find lots of
information and activity just by doing research, looking around. I,
as i am sure you have found, the internet offers scads of information
on just about any topic, someone has already inputted into the system.

greetings
I realise that this is not an amateur radio related question. I did ask this question in a more appropriate usenet group title but i got no information back.
Does anyone know what frequencies are currently being used to look at the cosmos and what frequencies the ufo research groups are using to look for signs of intelligent life. p.s. i have not jumped off the deep end.

I guess it really depends on how patient you are. The Michigan Tech ARC, w8yy, has had some success with rs-15. We have a 25W radio and a directional satellite antenna (about 10 or so elements). CW is really easy, that'd be your best bet. SSB is a a tad more difficult. Most of the trouble with SSB comes from the bird's spin, your signal will phase in and out. With good antennas, a reasonable amount of power (100 watts should be plenty), and a good sense of timing to deal with rs-15's spin, you should have no trouble working this satellite.

n9lmw will probably follow-up and correct any mistakes and perhaps give us a recount of his last experience with rs-15.

Well, since you asked me to James, here I go.

Actually, you're almost perfectly correct. I think the satellite antennas
are something like 20 elements though. 10 pairs of crossed elements. :)

As for the fading, just repeating yourself till you get through works
pretty well.

Matthew

(Europe Only) Uplink 144.70, 144.75, or 144.80 MHz
(Worldwide) Downlink 145.55 FM

--------------------------------------------------------------------------------
* Radio Sport-15 has battery chargeing problems therefore the transponder
and beacon are silent when the satellite is in darkness.

* Radio Sport-16 currently has it's Mode A transponder turned off. The
ground controlers seem to be experimenting with the various beacons,
therefore it is difficult to predict which will be on, 29.408 seems to be
on most passes.
```

* Please note Amsat Oscar-27 has a very sensitive receiver, I have routinely
uplinked to it with a handheld on low power. On the other hand reception
of the 70cm downlink signal is more difficult without a directional antenna
most of the time. Therefore it is important to make sure
that you can hear the satellite downlink before you transmit therefor
avoiding interfering with others already on this one channel satellite repeater.

* Fuji-Oscar 20 can also be used in mode JD (D meaning Digital), at time
of writing this satellite was reported to be in Analog mode.

* Fuji-Oscar 29 can also be used in mode JD (D meaning Digital), at time
of writing this satellite was reported by Jalsat to be in Analog mode
until March 21.

This FAQ is constantly being updated and re-released on a weekly basis on
or about Monday. Any constructive suggestions are always welcome.

946. DSP-2232

Newsgroup: rec.radio.amateur.space
Date: 1997-03-16 00:00:00 UTC
From: "Melvin C. Vye" <mvye@uakron.edu>
Message-ID: <332C7894.27A6@uakron.edu>
Source record: 19500

I'm using an AEA DSP-2232 with Vers 7-gateway roms. Now I'm interested in pacsats with my IC-821. I can decode anything I hear, both in 9600 FSK and 1200 BPSK, but need the satellite up/down function on the 2232, primarily for the 1200 BPSK modem. AEA manual for this version states that the up/down function is currently not functional for either of these modems.

Does anyone know if the 2232 has later version roms which support the up/down function for 1200 BPSK and 9600 FSK or do I have an orphan which I'll have to replace?

73 - Mel W8MV mvye@uakron.edu

~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~
NOAA 12 and 14 working OK, but the first time
I tried to hear Meteor 3-5 (9:00Pm CST AOS Dallas, TX)
there wasn't a peep. This would have been a 55 Deg pass.
Is there some known sked for this sat?

Ken K5MBV 5mbv@airmail.net and mbv@ti.com

From: mdim@intranet.GR
Message-ID: <9703171242.AA02957@lotos>
Source record: 19502

Dear friends

I am looking for the IRCI filters web site so I can order some filters
for my transceiver.(Any other manufacturer will be wellcome too).

If there is no www... site a fax number will be good enough too.
Any other suggestions will be accepted.

Thank you in advance

$$$ READ THIS $$$

NEW VERSION FOR 1997!! (Legal questions addressed!!)

In late October of 1996, I saw an article in an internet
newsgroup telling me that I could make $50,000.00 within a month
for an investment of only $5.00. I thought, "OH YEAH!!! I'VE
GOT A BRIDGE I'LL SELL YOU TOO!!!"
It sounded like all the rest of the "get rich quick" schemes and
scams I've seen over the past few years.

I spoke to my attorney, a few friends and my wife about
it, and they all agreed it was some kind of scam. I can't stand
scams, because usually someone gets burned, and I didn't want it
to be me. After rejecting the idea at first, it kind of played
on my mind and I thought, "What if it really worked?" I realized
all I had to lose was $5.00, I usually blow that much on the
lottery every week anyway, so I figured what the heck, and
decided to give it a shot.

Within two weeks I began receiving money in the mail!
Soon, hundreds, and then thousands of dollars began to roll in.
Within 4 weeks, I had received a total of $41,219.00! It came
from everywhere in the world. Lately, I've doubled my efforts
and the money is rolling in even faster. I would tell you how
much but then the IRS would know also, let's just say it's a VERY
comfortable living. Now, I am really going to work! Anybody can
afford to gamble $5.00 on a chance to make $35,000.00 or more in
a month, especially when the business has already proven itself.

If you follow the three steps below, there is no reason why
the same shouldn't happen to you! This is a legitimate investment
opportunity. You invest $5.00, and you receive a return on your
investment. So does the next investor. THIS IS NOT ILLEGAL!
THIS IS NOT A CHAIN LETTER! THIS IS PERFECTLY LEGITIMATE!
(See additional legal details below.)

THE PROCEDURE IS SIMPLE:

1) Invest your $5.00 by writing your name and address on five
seperate pieces of paper along with the words: "PLEASE ADD ME TO YOUR
MAILING LIST." (In this way, you're not just sending a dollar to
someone; you're paying for a legitimate service.) Fold on $1.00 U.S.
Treasury bill, money order, or bank note inside each piece of paper,
and mail them by standard U.S. Mail to the following five addresses:

1. J. Russell
872 W. Bigelow
Findlay, OH 45840

2. Silvestre Domingo Magos
1833 Vicente Dr.
San Luis Obispo, CA 93405

3. L. Lehr
329 Lafayette Rd.
Carneys Point, NJ 08069-2543

4. G. Seidler
379 Walnut St.
Stoughton, MA 02072

5. K. Wade
2349 Thornhill st.
Terrace, BC. CAN
V8G 4Z5

2) Now remove the top name from the list, and move
the other four names up. In other words, #5 becomes #4 and
so on. Put your name as the fifth one on the list. You can
do this by simply retyping the article or reposting it to
other newsgroups with the edited addresses.

3) Post the article to at least 200 newsgroups.
There are 22,000, so it shouldn't be hard to find that many.
Remember, there are no "Free Lunches" in this world and so the
harder you work the more money you will make.

You are now in the mail order investment business, and
should start seeing returns within a week or two. Of course,
the more newsgroups you post to, the greater your return will be.
If you wish to remain anonymous, you may use a pseudonym, but
make sure address is correct.

LEGAL ???

People have asked me if this is really legal, and it is.
You are using the Internet to advertise your business. What is
that business? You are assembling a mailing list of people who
are interested in home based computer and online businesses and
methods of generating income at home. REMEMBER - people send you
small fee to be added to your list. It is legal. What will you
do with your list of thousands of names? That's up to you.

HERE IS WHY THE SYSTEM WORKS:

The internet is growing at a tremendous rate - it doubles
in size every 4 months. Think about it. You see those "Make Money
Fast" posts more and more. All that growth means profits for
everyone who participates. There are no losers.

Of every 200 posts I made, I received roughly 5 responses.
That probably doesn't seem like much. You make $5.00 for every 200
posts with your name at #5.

Each person who sent you $1.00 now also makes 200 additional
postings with your name at #4. i.e. 1000 postings. On average, 50
people will send you $1.00 with your name at #4. That's $50.00

Your 50 new agents make 200 postings each with your name
at #3 or 10,000 postings. Average return 500 people=$500.00.
They make 200 postings each with your name at #2=100,000
postings=5000 returns at $1.00 each=$5,000.

Finally, 5,000 people make 200 postings with your name
at #1 and you get a return of $50,000 before your name drops off
the list. AND THAT'S IF EVERYONE DOWN THE LINE MAKES ONLY 200
POSTINGS! Total income in one cycle = $50,000.

From time to time, when you see your name no longer on the
list, you take the latest posting that appears in the newsgroups,
and send out another $5.00, and put your name at #5, and start
posting again. Remember, 200 postings is only a guideline. The
more you post, the greater the return.

Lets review why you should do this. THE ONLY COST IS $5.00,
5 STAMPS, AND 5 ENVELOPES. Anyone can afford $5.00 for such an
effortless investment with such SPECTACULAR RETURNS.

Some people have said to me, "What happens if the scheme is
played out and no one sends me any money?" BIG DEAL, so you lose
$5.00. But what are the chances of that happening? SINCE THIS IS
A BRAND NEW PROGRAM AS OF JANUARY 1997, YOU'RE IN ON THE GROUND FLOOR!

There are millions of internet users, and millions of new
net surfers every month. REMEMBER - read the instructions carefully,
and play fairly. THAT'S the only way this will work. Get a printout
so you can refer back to this article easily.

Keep a list of everyone that sends you money, keep good books,
pay your taxes, and always keep an eye on the postings to make sure
everyone is playing fairly. You know where your name should be.

If you're really not sure or still think this can't be for real,
then don't do it. But please print this article and pass it along to
someone you know who really needs the bucks, and see what happens.

REMEMBER - HONESTY IS THE BEST POLICY. WHAT IS $5.00 TO YOU?
YOU DON'T NEED TO CHEAT THIS IDEA TO MAKE MONEY!!! (We will monitor
the program and if we find you have cheated by not sending your money
to your five recipients, we will just dump you out of the system.)
This is the easiest way that you can make a buck. Think how excited
you'll be to open up your mailbox day after day! Will it be $50.00 or
$5,000.00?? Start making your plans, because it can happen to you.

DON'T PASS UP THIS ONCE IN A LIFETIME OPPORTUNITY!!!

****

EXTRA SECTION:

HOW TO POST TO NEWSGROUPS FAST WITH YOUR WEB BROWSER:

The fastest way to post to a Newsgroup:

Simply highlight and COPY (Control-C for copy) the text this e-mail message and PASTE it into a text editor such as Notepad and SAVE it (as a .txt file).

After you have made the necessary changes that are outlined above, simply COPY and PASTE the text into the message section of the message composition window and to be posted to the Newsgroup and post it.!

****

If you have Netscape 3.0 follow these simple steps:

1) Click on any Newsgroup like normal, THEN click on 'TO NEWS', which is on the far left when you're in the Newsgroup page. This will bring up a box to type a message in.

2) Leave the Newsgroup box like it is, CHANGE the subject box to something flashy like, "NEED CASH $$$ READ HERE $$$" or "FAST CASH"!!!

3) Tab once and you should be ready to type. Now, retype (only once) THIS entire article WORD FOR WORD, except insert your name at #5, and remove #1 off the list, plus anyother small changes you think you need to make. Keep almost all of it the SAME!

4) When you're done typing the WHOLE article, click on FILE in THIS BOX, RIGHT ABOVE SEND, NOT WHERE IT SAYS NETSCAPE NEWS ON THE FIRST BOX.

Click on SAVE AS when you're under FILE. Save your article as a text file to your C: or A: drive. DO NOT SEND OR POST YOUR ARTICLE UNTIl YOU DO THIS. Once saved, move on to number 5 below.

NOTE: If you don't want to type in the whole article by hand, AND you know how to use a plain text editor (like NOTEPAD), you can edit the file ahead of time, then attach it as shown in step 6.

5) If you still have all of your text, send or post to this Newsgroup now just by clicking send, which is right below FILE, and right above Cc:.

6) Here's where you're going to post to all 200. OK, click on any Newsgroup then click on 'TO NEWS' , again in the top left corner. Leave the NEWSGROUPS BOX alone again, put a flashy subject title in the SUBJECT BOX, hit TAB once you're in the body of the message. Click on ATTACHMENTS, which is below the SUBJECT BOX. You will get another box to come up. Click on ATTACH FILE, then find YOUR file that you saved; click on the file, and then click 'OPEN' now click on OK; if you did this right, you should see your

file name in the attachments box, and it wil be shaded green.

Note: If you don't want to type in the whole article and you know how to use a plain text editor (Notepad), you can edit the file ahead of time, then attach it.

QUICK TIP!!!

You can post this message to many Newsgroups at a time by simply selecting a Newsgroup near the top of the screen, hold down the SHIFT key, and then select a Newsgroup near the bottom of the screen. All of the Newsgroups in between will also be selected.

IF YOU USE INTERNET EXPLORER IT'S JUST AS EASY...HOLDING DOWN THE LEFT MOUSE BUTTON, highlight this article. Then press the "control" and the "c" key at the same time to copy this article. Then print this article for your records, to have the names of those you will be sending $1.00 bills.

Go to the Newsgroup and press "post an article". A window will open. Type in your headline in the subject area then click in the large window below. Press "control" and the "v" keys and the article will be placed in the window.

If you want to edit the article, do so and then highlight and copy it again. Now every time you post the article in a new Newsgroup all you have to do is press "control" and "v" and press post.

That's all there is to it. Each time you do this, all you have to do is type in a different Newsgroup, until you have posted it to 200 or more DIFFERENT Newsgroups.

You see? Now you just have 199 more to go!!! (Don't worry each one takes about 30 seconds, once you get used to it.)

REMEMBER 200 IS THE MINIMUM. The more you post the more money you will receive. AND THAT'S ALL THERE IS TO IT!!!

DON'T LET THIS ONCE IN A LIFETIME OPPORTUNITY PASS YOU BY!!! START ENJOYING THE GOOD LIFE, YOU DESERVE IT!!!

950. Re: What are the frequencies used in radio astronomy?

You'd probably best look at www.nfra.nl, they/ve got a quite extensive site.

My advise:
take a newspaper, take the international section and look for " Albania".
have fun! (and a newspaper is less than $5 too)

Howdy Pirens:
You can get TLE's from these sites, and while you are at the RPV site,
download STS PLUS. You can track 32 sat's with this program, and it will
correct for dopler shift.

SB SAT @ AMSAT $ANS-075.01
SECOND CALL FOR PAPERS

HR AMSAT NEWS SERVICE BULLETIN 075.01 FROM AMSAT HQ
SILVER SPRING, MD, MARCH 16, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-075.01

The 1997 Amsat-NA annual meeting and space symposium will be held
October 17-19 1997 at the Airport Delta Hotel in Toronto, Ontario
Canada.

This is the Second Call for Papers - Those who wish to present papers at
this event, should forward their request together with a title by April
1 1997. Topics may include all relevant Amateur Satellite disciplines.

Abstracts are required by June 1 1997 with final versions by August 1
1997 (so that they may be printed in the proceedings).

We also encourage those not able to attend to send papers for inclusion
in the proceedings of the symposium

Submissions and esquires should be made to:-

Wayne Chandler, VE3WHC

by internet: ve3whc@amsat.org (apologies to those who tried and
could not get in earlier)
By Mail Wayne Chandler
Box 6, Carlisle, Ontario
Canada. L0R 1H0

[ANS thanks Wayne Chandler, VE3WHC, for this information.]

SB SAT @ AMSAT $ANS-075.02
AMSAT-UK 12TH COLLOQUIUM

HR AMSAT NEWS SERVICE BULLETIN 075.02 FROM AMSAT HQ
SILVER SPRING, MD, MARCH 16, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-075.02

The 12th AMSAT-UK Colloquium will be held at Surrey University, Guildford,
Surrey, U.K., from Friday 25th to Sunday 27th July 1997. This year's event
will comprise three days of technical and operational matters only; there
will be NO "political" subjects.

Amsat-UK invites authors to submit papers, about amateur radio space and associated activities, for this event and for the "Proceedings" document which will be published at the same time. It is normally preferred that authors present the papers themselves rather than having someone else read them in the authors' absence, but AMSAT-UK also welcomes "unpresented" papers for the document.

Abstracts of Papers should be submitted as soon as possible; the final date for acceptance has not yet been finalized but is likely to be 15 June 1997 in order that the "Proceedings" document be available to participants.

Submissions should be sent *ONLY* to G3RWL, via the following routes:

Internet e-mail: g3rwl@amsat.org
Packet Radio: G3RWL @ GB7HSN.#32.GBR.EU
Satellite: AO16/19/22/23/25
Terrestrial mail: R W L Limebear G3RWL
60 Willow Road
Enfield EN1 3NQ
United Kingdom.
AMSAT-UK also invites anyone with requests for Program Topics (and possible authors) to submit them as soon as possible to G3RWL as above. Invitations for papers on specific subjects will be included in the final call, at the end of April.

Information about the Colloquium will shortly be available on the World Wide Web pages at the University of Surrey on:
http://www.ee.surrey.ac.uk/CSER/UOSAT/amateur/colloq97.html

A change to the booking requirements has been made this year] such that AMSAT-UK will accept unregistered day attendees subject to space, but they will not receive a free lunch. As usual, facilities will be available for attendees who wish to arrive at UoS on the evening before the event starts.

This year a healthy coverage of microwave-related material pertinent to the advent of the P3D satellite will be presented, and that there will be microwave test equipment available on the Friday evening for people to check
their home projects. Availability of application forms to attend the Colloquium will be publicized later in the year.

NOTE: All other inquiries about colloquium-97 should be sent] to the AMSAT-UK
office: AMSAT-UK London e12 5EQ

[ANS thanks Richard Limebear, G3RWL, Colloquium Program organizer for this news item.]

/EX

SB SAT @ AMSAT $ANS-075.03
MIR MISSION UPDATE

HR AMSAT NEWS SERVICE BULLETIN 075.03 FROM AMSAT HQ
SILVER SPRING, MD, MARCH 16, 1997

TO ALL RADIO AMATEURS BT
BID: $ANS-075.03

U.S. astronaut Jerry Linenger, KC5HBR, has reached the halfway point of his mission aboard the Russian space station Mir, today is his 62nd day in space. For his two Russian crew members, its their 33rd day.
The primary oxygen generation system has been off-line for a week now. The Electron system shut itself down last week due to excess build up of air. Both Electron systems are having problems, Electron 2, which was their primary system has a filter bypass problem, some spare parts will be coming up on the next Progress cargo ship. Electron 1, in the Kvant 1 module is having pump problems. Spare parts are a problem, but some are being manufactured right now.

Scheduled Activities

Apr 6- (TENTATIVE) Progress M-34 Launch.

Apr 8- (TENTATIVE) Progress M-34 docking.

[ANS thanks Keith Stein for this story.]

SB SAT @ AMSAT $ANS-075.04
RS-16 LATEST

HR AMSAT NEWS SERVICE BULLETIN 075.04 FROM AMSAT HQ
SILVER SPRING, MD, MARCH 16, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-075.04

B.J. Arts, WT0N, reports that during the March, 14th, 1740 UTC pass over North America, RS-16's 10 meter, 29.408 , 29.451 MHz, beacons were not heard. The 70 cm, 435.504 MHz and 435.548 MHz, beacons were active at that time. The 435.504 MHz beacon was very strong, an S-9. The 435.548 beacon was very weak, an S-1. WT0N tried the passband on 2 meters, 145.915 - 145.948 MHz, and listened on 10 meters, 29.415 - 29.448 MHz . He did not hear his downlink signal and assumes that the transponder is not yet active.

Here is the example of 435 MHz CW telemetry, received by UA3CR on the 12.03.97 orbit number 134, over Moscow.
Below are some important parameters:

RS16 RS16
P160 PSU voltage (16.0 Volts)
O0 Solar panel voltage
N0 Solar panel current
M0
L16
K92
J5

I7
H49
G0
F156
E10 Temperature inside 1 in C deg.
D12 Temperature inside 2 in C deg.
C12 Temperature inside 3 in C deg.
B11 Temperature inside 4 in C deg.
A9 Temperature inside 5 in C deg.

[ANS thanks Richard W L Limebear, G3RWL, and B.J. Arts,
WT0N, for these reports..]

SB SAT @ AMSAT $ANS-075.06
WEEKLY SATELLITE REPORT PT 1

HR AMSAT NEWS SERVICE BULLETIN 075.06 FROM AMSAT HQ
SILVER SPRING, MD, MARCH 16, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-075.06

MIR:
(New frequencies implemented 1 January 1997:
Uplink 145.2 MHz FM
Downlink 145.8MHz FM)
Note, the above split is used for both packet and voice operation.

SAFEX, MIR 70cm Repeater
(Uplink 435.750MHz FM, Downlink 437.950MHz FM,
Subaudible tone 141.3 Hz)
The repeater operational and active..

RS-10:
(Uplink 145.865-145.905MHz CW/SSB, Downlink 29.36-29.4MHz CW/SSB)
RS-10 has strong downlink signals.
[ANS thanks Mark Herrick, KL0AD, for this report.]

RS-12:
(Uplink 21.21-21.25MHz CW/SSB, Downlink 29.41-29.45MHz or
145.91-145.95Mhz CW/SSB)
The sat continues to provide excellent downlink signals in both T-
and K-mode.
[ANS thanks Dick Montgomery, N3DV, for this update.]

RS-15
(Uplink 145.858-145.898MHz CW/SSB, Downlink 29.354-29.394MHz CW/SSB)
RS-15 was a little weak on the downlink and the satellite spin puts a twist
in, but you can time the important exchanges around that "null".
[ANS thanks Mark Herrick, KL0AD, for this report.]

Be aware that RS-15 has battery charging problems. When the satellite is
in the dark it has low output power..
[ANS thanks Geoff Perry for this report.]
(Hint: If SSB doesn't work for you, try CW. CW is very easy
to hear on the downlink!)

RS-16
RS-16's 70 cm, 435.504 Mhz beacon on RS-16 operational. The 10 meter beacon
is not active at this time. Transponder is not operational.
RS-16
1 24744U 97010A 97066.14889668 .00002139 00000-0 74153-4 0 367
2 24744 97.2814 333.1163 0009586 91.5327 268.6998 15.30875098 474

FO-20
(Uplink 145.9-146.0MHz CW/LSB, Downlink 435.8-435.9MHz CW/USB)
Operating normally. Strong downlink signal.

KO-23
(Uplink 145.85, 145.9MHz FM, Downlink 435.175MHz FM,
9600 Baud FSK.)
KO-23 operating normally.

KO-25:
(Uplink 145.87MHz FM, Downlink 436.5MHz FM,
9600 Baud FSK.)
KO-25 operating normally.
[ANS thanks Jim Weisenberger, AA7KC, for his reports on
KO-25 and KO-23.]

AO-27:
(Uplink 145.85MHz FM, Downlink 436.8MHz FM)
Operating normally and lots of activity heard over
North America and Europe.
As of NOV 2, the AO-27 schedule is as follows:
TEPR 4 = 16 = 8 Minutes in Length
TEPR 5 = 52 = 18 Minutes in Length

TX-3 is on Mid Power during TEPR 5.

This will have the TX turn on 8 Minutes after the satellite
enters the sun for a duration of 18 Minutes. This is a "back to US
Latitudes"operation.

N4USI, AO-27's current Command Station sends his thanks all for
their messages about the satellite turning on later than expected. He
reports he's deliberately letting the "turn on" time drift later
(for about 4-5 Minutes) so stations in the southern latitudes can also
have a chance to work AO-27. Every few months he will be letting the
turn on time drift like this to give more stations a chance to make
contacts thru the satellite.
[ANS thanks Michael Wyrick, N4USI, AO-27 Control-op, and Miguel A.
Menendez, EA1BCU, for this update.]

FO-29
Voice/CW
(Uplink 145.9-146.0MHz CW/LSB, Downlink 435.8-435.9MHz CW/USB)
Digital
(Uplink 145.85, 145.87, 145.910 MHz FM, Downlink 435.910 MHz FM 9600
baud BPSK)
FO-29 is in Analog mode at the current time.
The latest FO-29 Schedule can be found at.
http://www.kt.rim.or.jp/~jr1nvu/eindex.html
03/14/97 01:05 utc JA
03/21/97 00:00 utc JD 1200 bps PSK
03/28/97 10:45 utc Digi-Talker
04/01/97 00:30 utc JD 9600 bps FSK

SB SAT @ AMSAT $ANS-075.07
WEEKLY SATELLITE REPORT PT 2

HR AMSAT NEWS SERVICE BULLETIN 075.07 FROM AMSAT HQ
SILVER SPRING, MD, MARCH 16, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-075.07

AO-10:
(Uplink 435.030-435.18MHz CW/LSB, Downlink 145.975-145.825MHz
CW/USB)
AO-10
Participants in the Amsat-UK Central England VHF Net reported good results
on AO-10. Malcom G7NFO had worked some interesting "DX" including TR8CA,
PP8KWA,ZS2BWB and PY0FF.
[ANS thanks John Heath, G7HIA, Net Controller, for this report.]

Updated Keps for AO-10 are as follows:
1 14129U 83058B 97054.50000000 .00000010 00000-0 57107-5 0 5005
2 14129 25.8792 163.0281 6052907 93.3854 313.1701 2.05882272103000
[ANS thanks Ken Ernandes, N2WWD, for the updated keps.]

OSCAR-11
(Downlink 145.825MHz. FM, 1200 Baud PSK)
.The last month (14 January - 17 February) has been uneventful for
OSCAR-11. Good, steady signals have been received from the 145.826
MHz. beacon. Mirek, OK2AOK reports hearing the mode-S beacon on
January 25th. The signals peaked at S6 on a pass when the maximum
elevation was 21 degrees.
[ANS thanks Clive Wallis, G3CWV, and Richard W L Limebear, G3RWL,
for this information.]

AMSAT-OSCAR-16 (PACSAT)
(Uplink 145.9, 145.92, 145.94, 145.86MHz FM, Downlink 437.0513MHz SSB,
1200 Baud PSK.)
PACSAT (AO-16)
It is working normally in its orbits on Europe.

1200 bps Manchester FSK modulation used on Uplinks.
1200 bps RC-BPSK-TX modulation used on Downlink. (+/- 10 KHz Doppler
correction). Graphic information about WOD/Telemetry values can find it in:
http://www.arrakis.es/~ea1bcu/ao16.htm
[ANS thanks Miguel A. Menendez, EA1BCU, for this report.]

DO-17(DOVE)
(Downlink 145.825MHz FM, 1200 Baud AFSK.)
No changes reported during last few weeks

WEBERSAT (WO-18)
(Downlink 437.104MHz SSB, 1200 Baud PSK AX.25.)
Webersat (WO-18) is currently in MBL mode after last weeks system
crash. The satellite appears to be in good condition broadcasting
MBL telemetry.

BCRi316.43mA bplt 1.340C TxPw 0.231W 5 V 5.742V 8.5V10.008V 10V
14.036V
[ANS thanks Tommy Davis, IK3WVJ, for this report.]

LUSAT-OSCAR-19
(Uplink 145.84, 145.86, 145.88, 145.9 MHz FM, Downlink 437.1528 MHz SSB,
1200 Baud PSK AX.25.)
LUSAT (LO-19) is working excellently in its orbits on Europe.
1200 bps Manchester FSK modulation used on Uplinks.
1200 bps RC-BPSK-TX modulation used on Downlink.
<Beacon>
22 de Enero de 1997.
!7 years !
Gracias a todos los amigos que lo hicieron posible.
Amsat - LU8DYF
[ANS thanks Miguel A. Menendez, EA1BCU, for this report.]

IO-26 (ITAMSAT):
(Uplink 145.875, 145.9, 145.925, 145.95MHz FM, Downlink 435.822MHz SSB,
1200 Baud PSK.)
IO-26 controllers report that the spacecraft is now in IHT mode. The new
ROBOT software is under currently undergoing tests. The beacon reports
that the digipeater is OFF and that the ROBOT is undergoing tests.
Controllers ask that groundstations please do not transmit on any of
the satellite's uplink frequencies for the time being.
[ANS thanks Daniele Piercarlo, IK2XRO, ITMSAT Command Station for this
report.]

Sure not! If you plan to install a preamp, most probably you will get a lot of noise, because your area it seems to be a lot of "radioelectric polution".

I would try a specific bandpass filter between your antenna and receiver. BTW, which scanner receiver do you use? I'm having quite well results with an Icom IC-R100 at 180kHz bandwith. (I'm looking a smaller IF filter, but not found yet).
